

UX Case Study

# UX Case Study of Different Sportsbook and popular websites for Vietnam language

# Objectives & Goals

- Font Size and Display
  - How font sizes, formatting, and content hierarchy impact readability and ease of finding information on websites and apps.
- Display of Currency Across Countries
  - How monetary values and currency are displayed across websites and apps for different international target audiences
- User Interface behaviour
  - Established psychological and behavioral theories to craft informed assumptions about likely users and predict possible behaviors or motivations.

# Summary

## Font usage

- use single font-family which supports multiple language (Faster loading speed of 1~2 font-family compare to loading 5~6 font-family in most of the betting websites )
- use Apple or Google recommended font-size for app (More aligned with industry standard and less confusing refer to bk8 font sizes)

| Style       | Weight                   | Line-Height | Font Size(Px) |
|-------------|--------------------------|-------------|---------------|
| large title | regular, <b>semibold</b> | 1.212       | 33            |
| title 1     | regular, <b>semibold</b> | 1.259       | 27            |
| title 2     | regular, <b>semibold</b> | 1.333       | 21            |
| title 3     | regular, <b>semibold</b> | 1.368       | 19            |
| headline    | medium, <b>semibold</b>  | 1.25        | 16            |
| body        | light, regular, medium   | 1.25        | 16            |
| callout     | medium, <b>semibold</b>  | 1.2         | 15            |
| subhead     | regular, medium          | 1.285       | 14            |
| footnote    | regular, medium          | 1.333       | 12            |
| caption     | light, <b>semibold</b>   | 1.454       | 11            |

## Currency display

- Recommend to display currency in 2 decimal places regardless. (Less of ui/ux but more for backend infrastructure to keep data consistent)

## Registration

- Allow multiple ways of creating new account for user. (Ease of convenience, attracting more new users as current competitor already offering.)

## Layout

- Majority of sportsbook or related website use similar layout.
- Recommend to show bet slip in a more prominent placing, e.g. floating action tab
- Multiple ways of navigation to change language, e.g. another cta at bottom

Competitor Analysis

Competitor 1

BK8

Fonts Family

Nunito, Averta std

Nunito as primary font for vietnamese

Advert Std for english

Font Sizes (px from rem)

- 48.828 px
- 31.738 px
- 24.414 px
- 22.460 px
- 17.578 px
- 16.601 px
- 15.625 px
- 14.648 px
- 13.671 px
- 12.695 px
- 11.718 px
- 10.742 px
- 9.7656 px
- 6.8359 px

Font Weight

- 400 / Regular
- 600 / Semi-bold
- 700 / Bold

\*in mobile screen smallest width of 320px they use 0.15

rem for 9px value estimate root font size of 65px

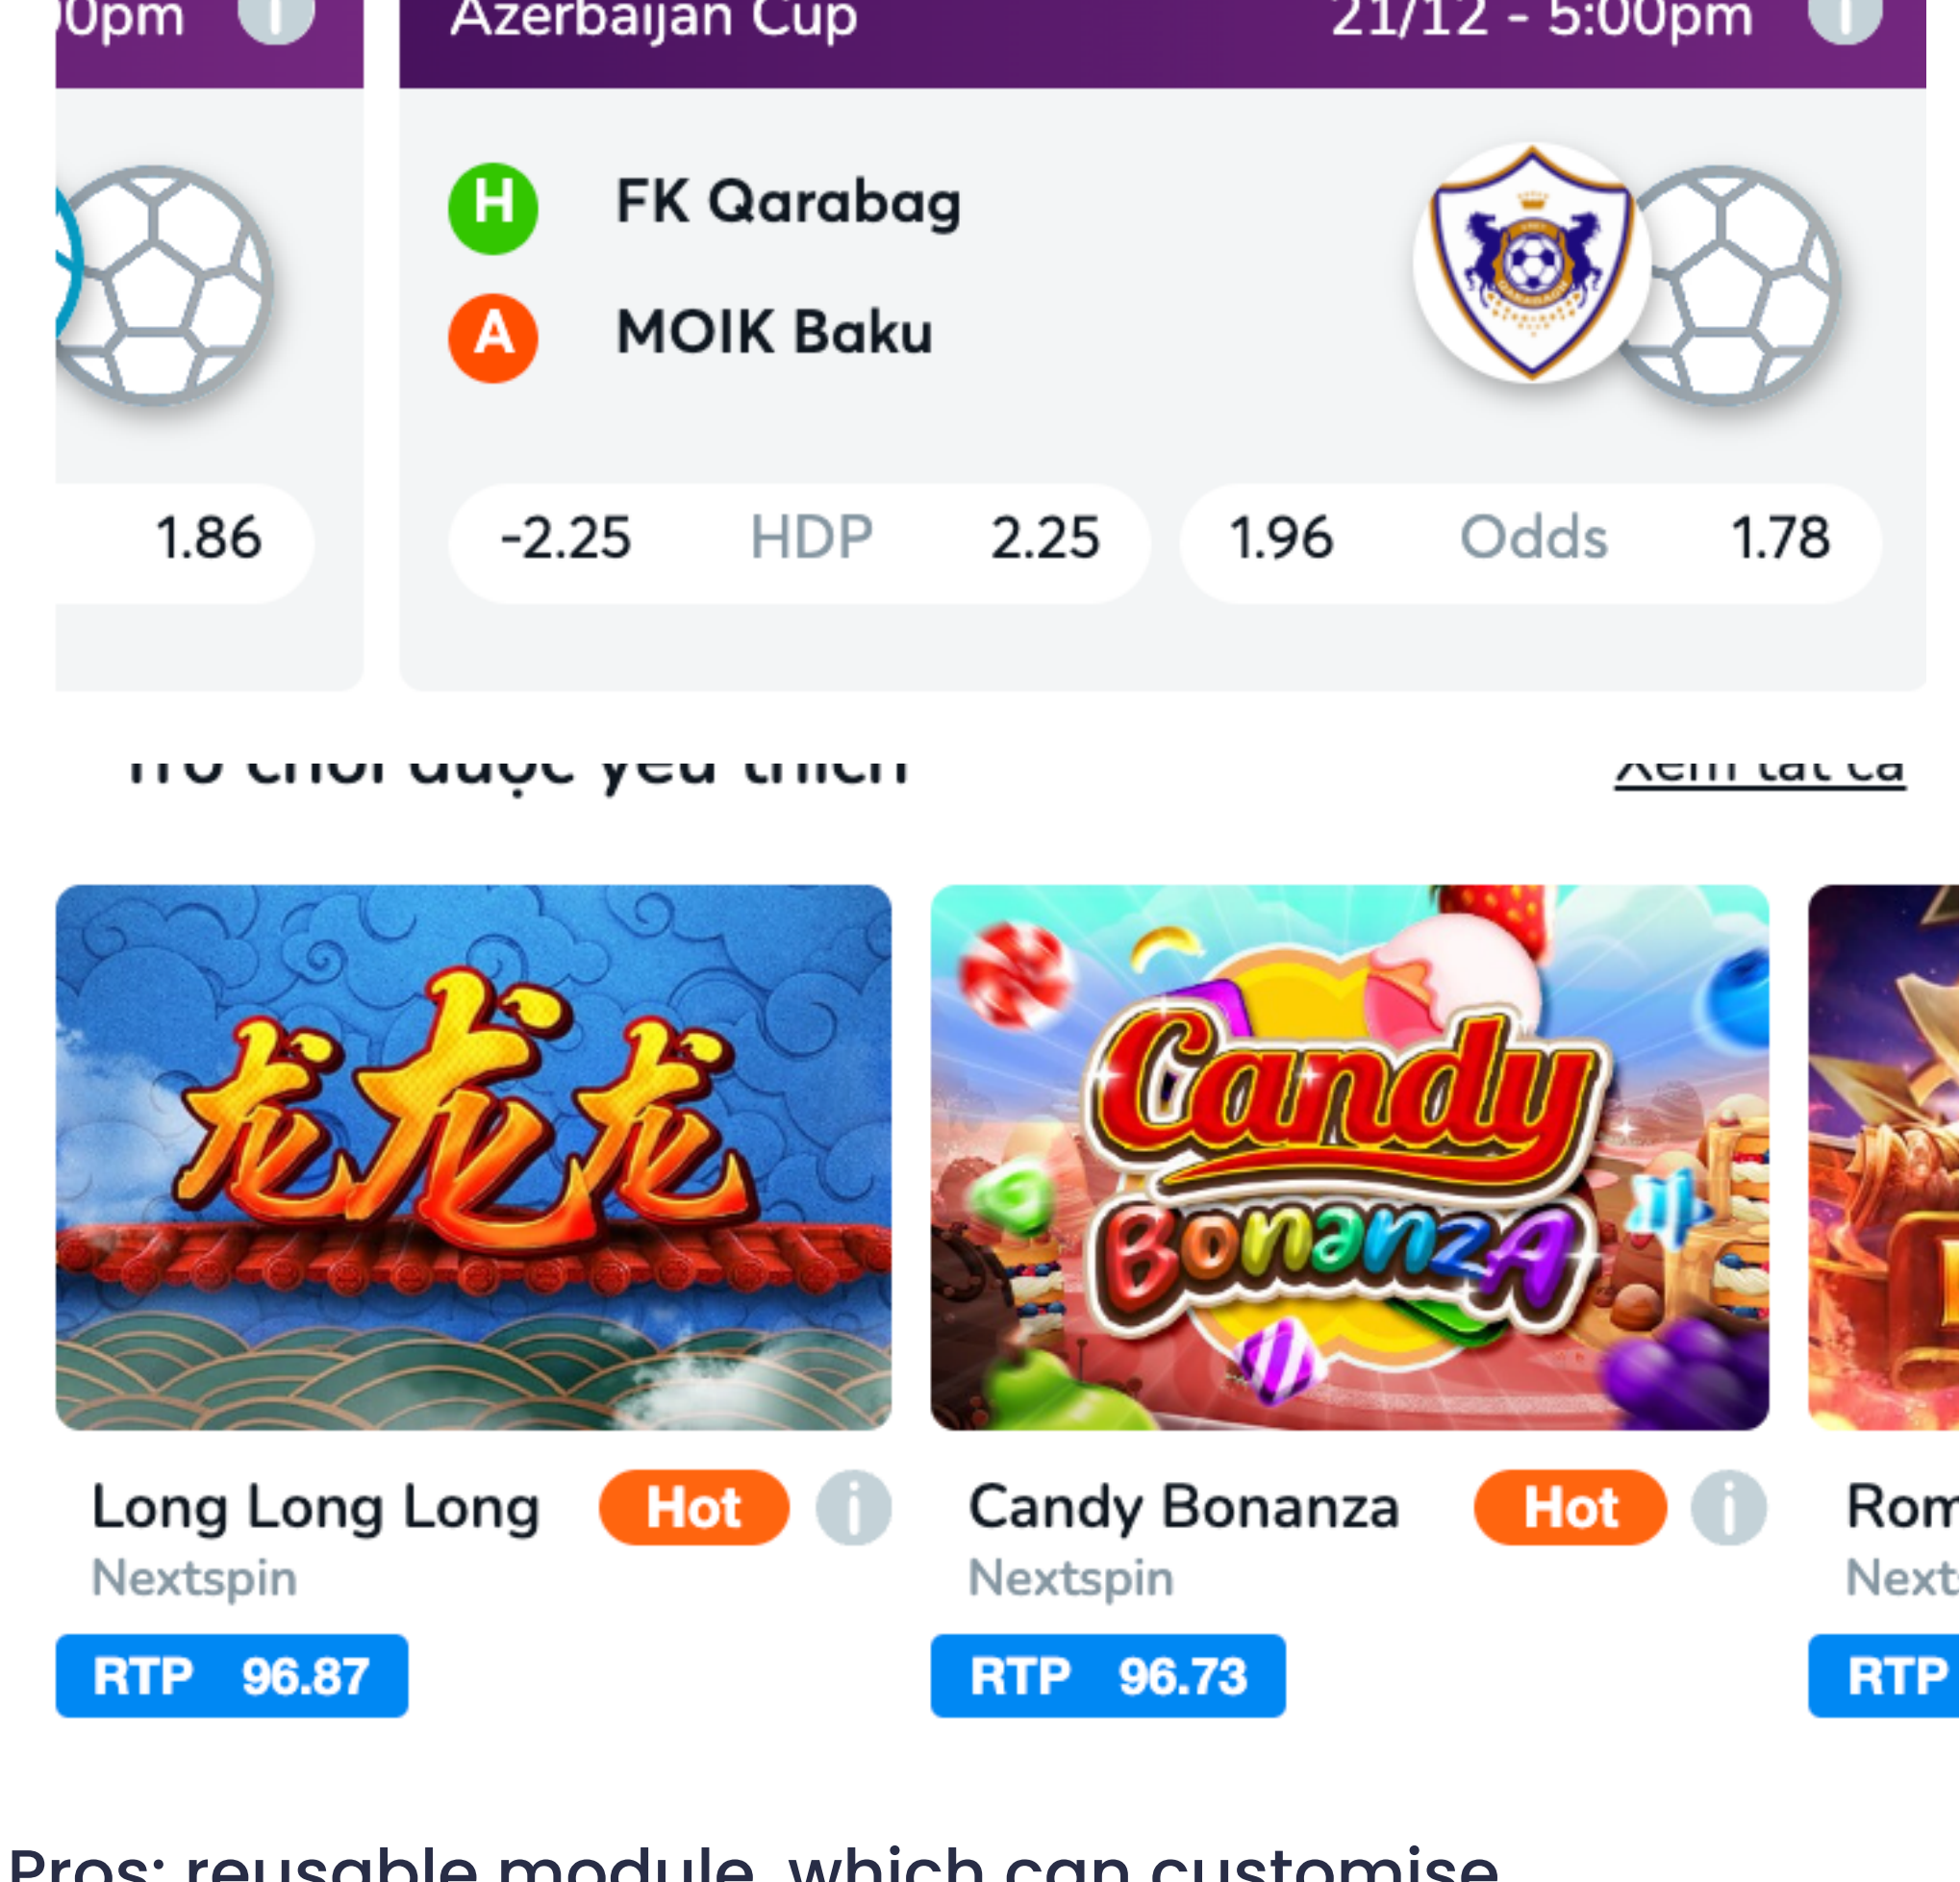

UI pros & cons

Pros: prominent active state

Cons: user may not know this is a slider/carousel

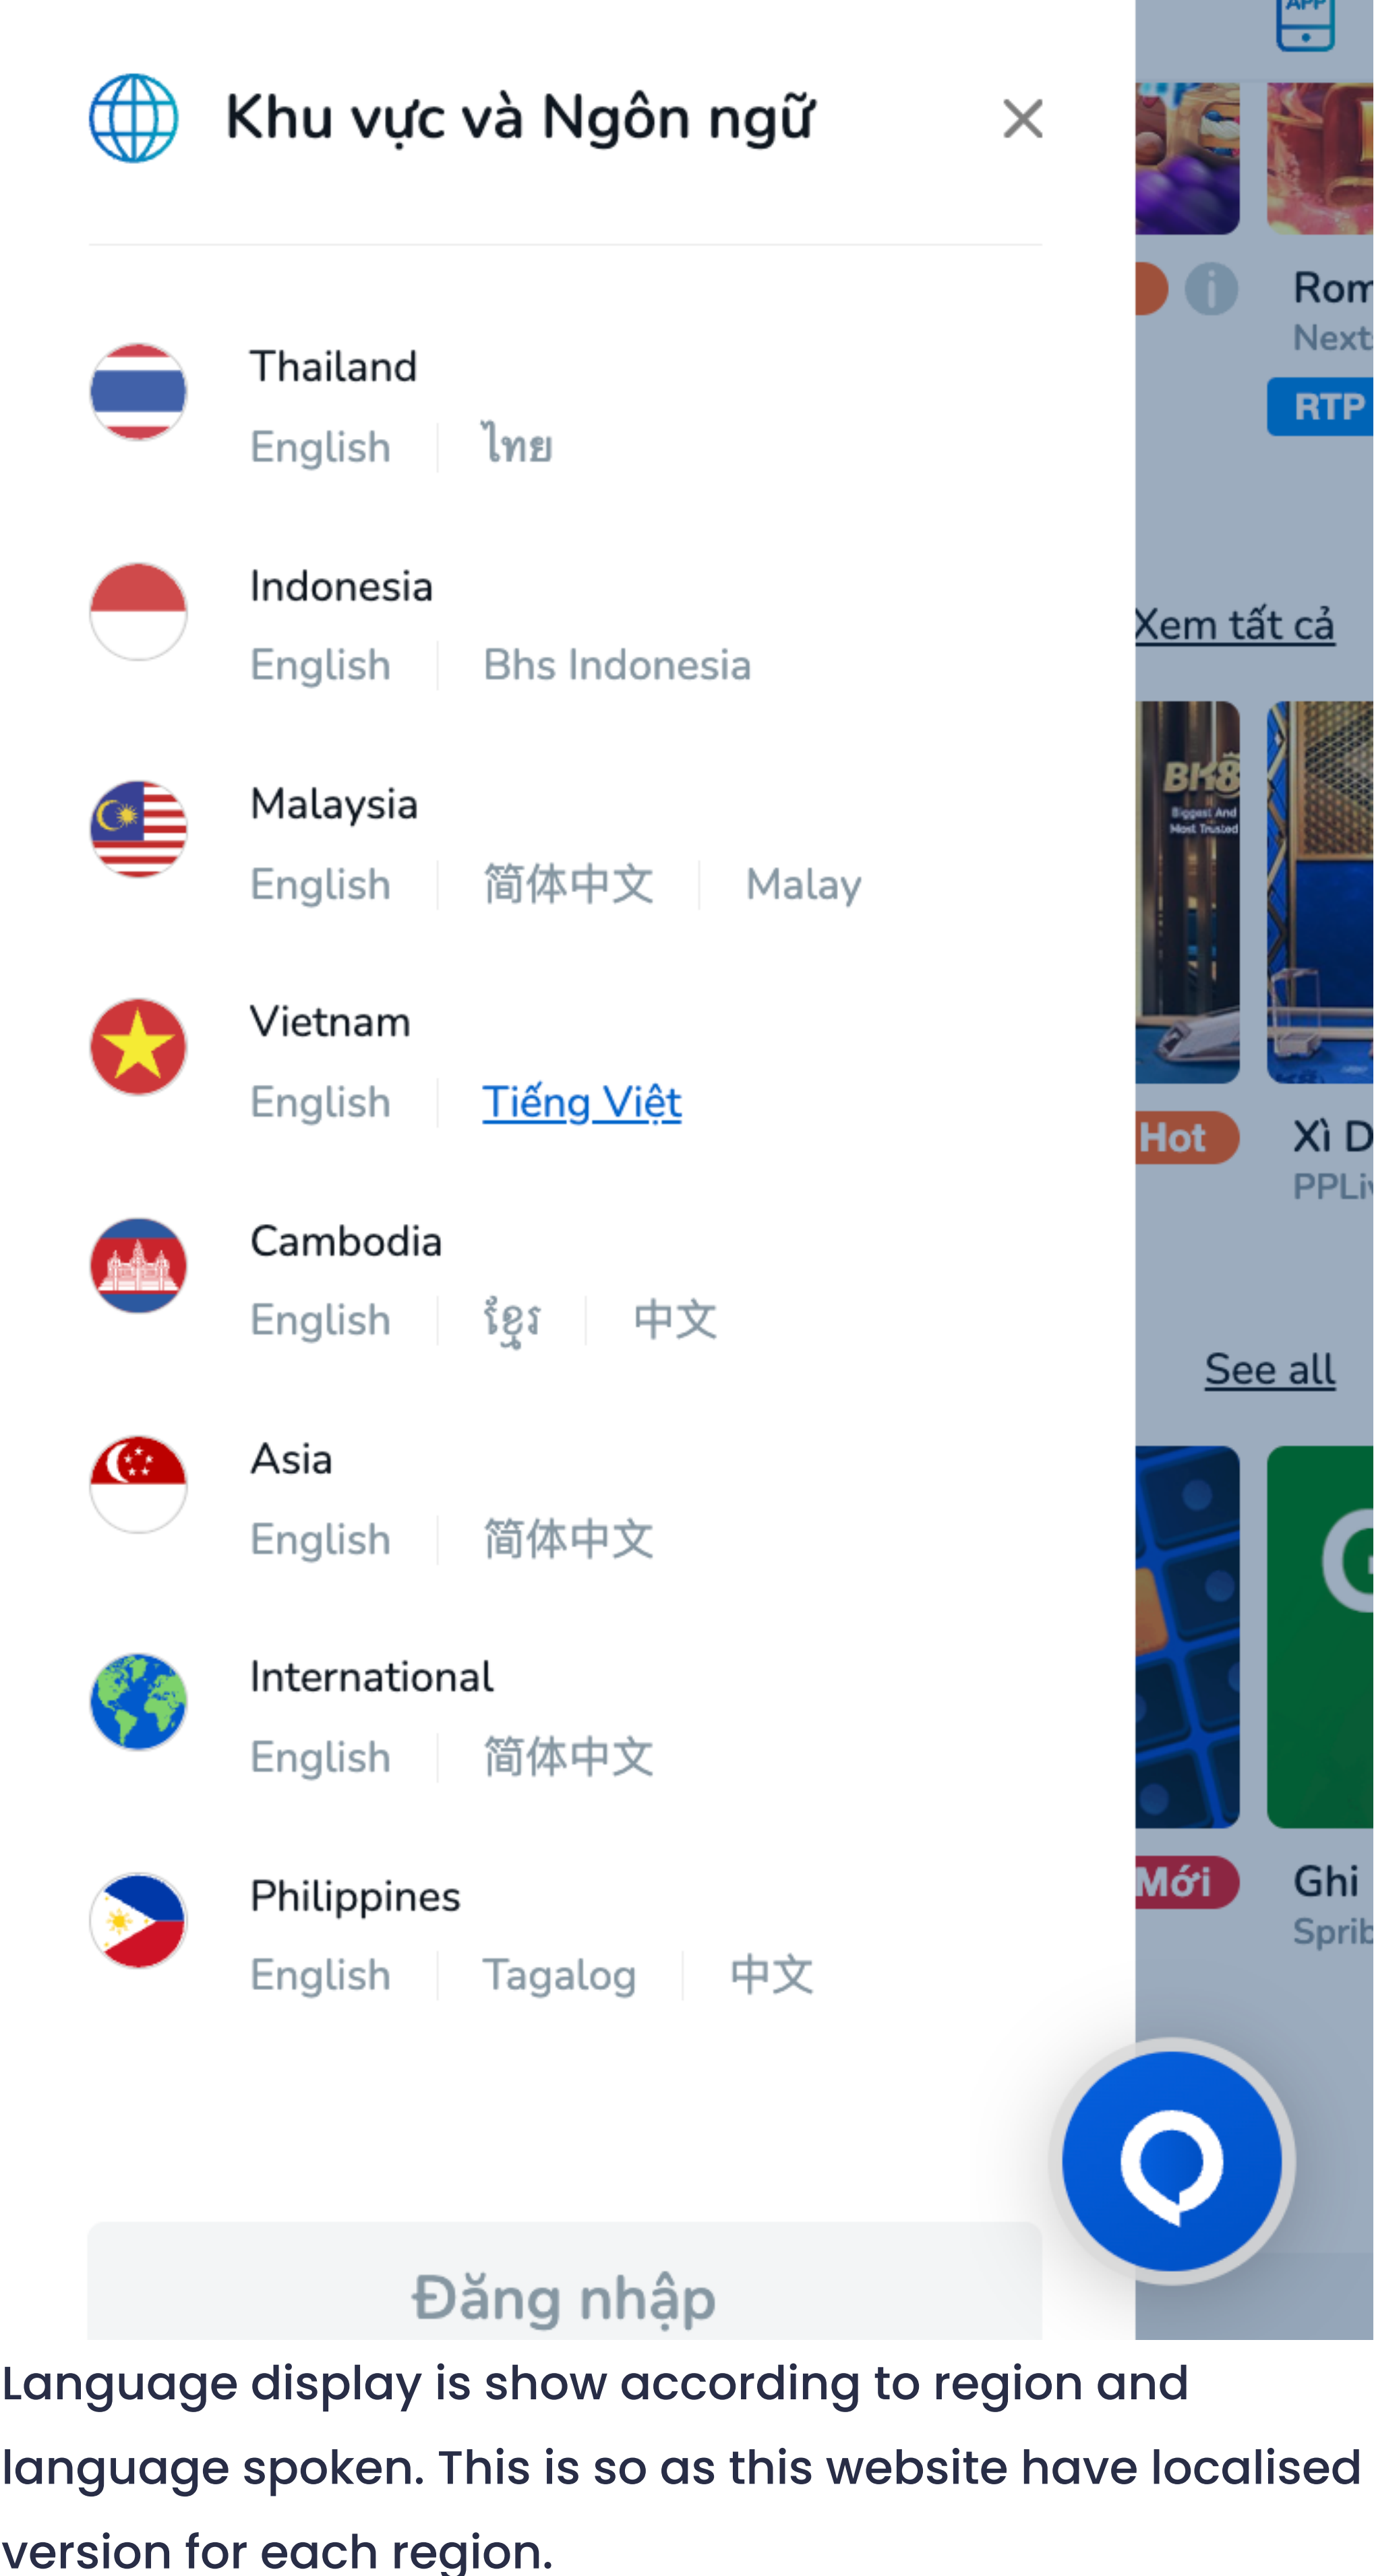

reusable carousel/slider component

Pros: reusable module, which can customise

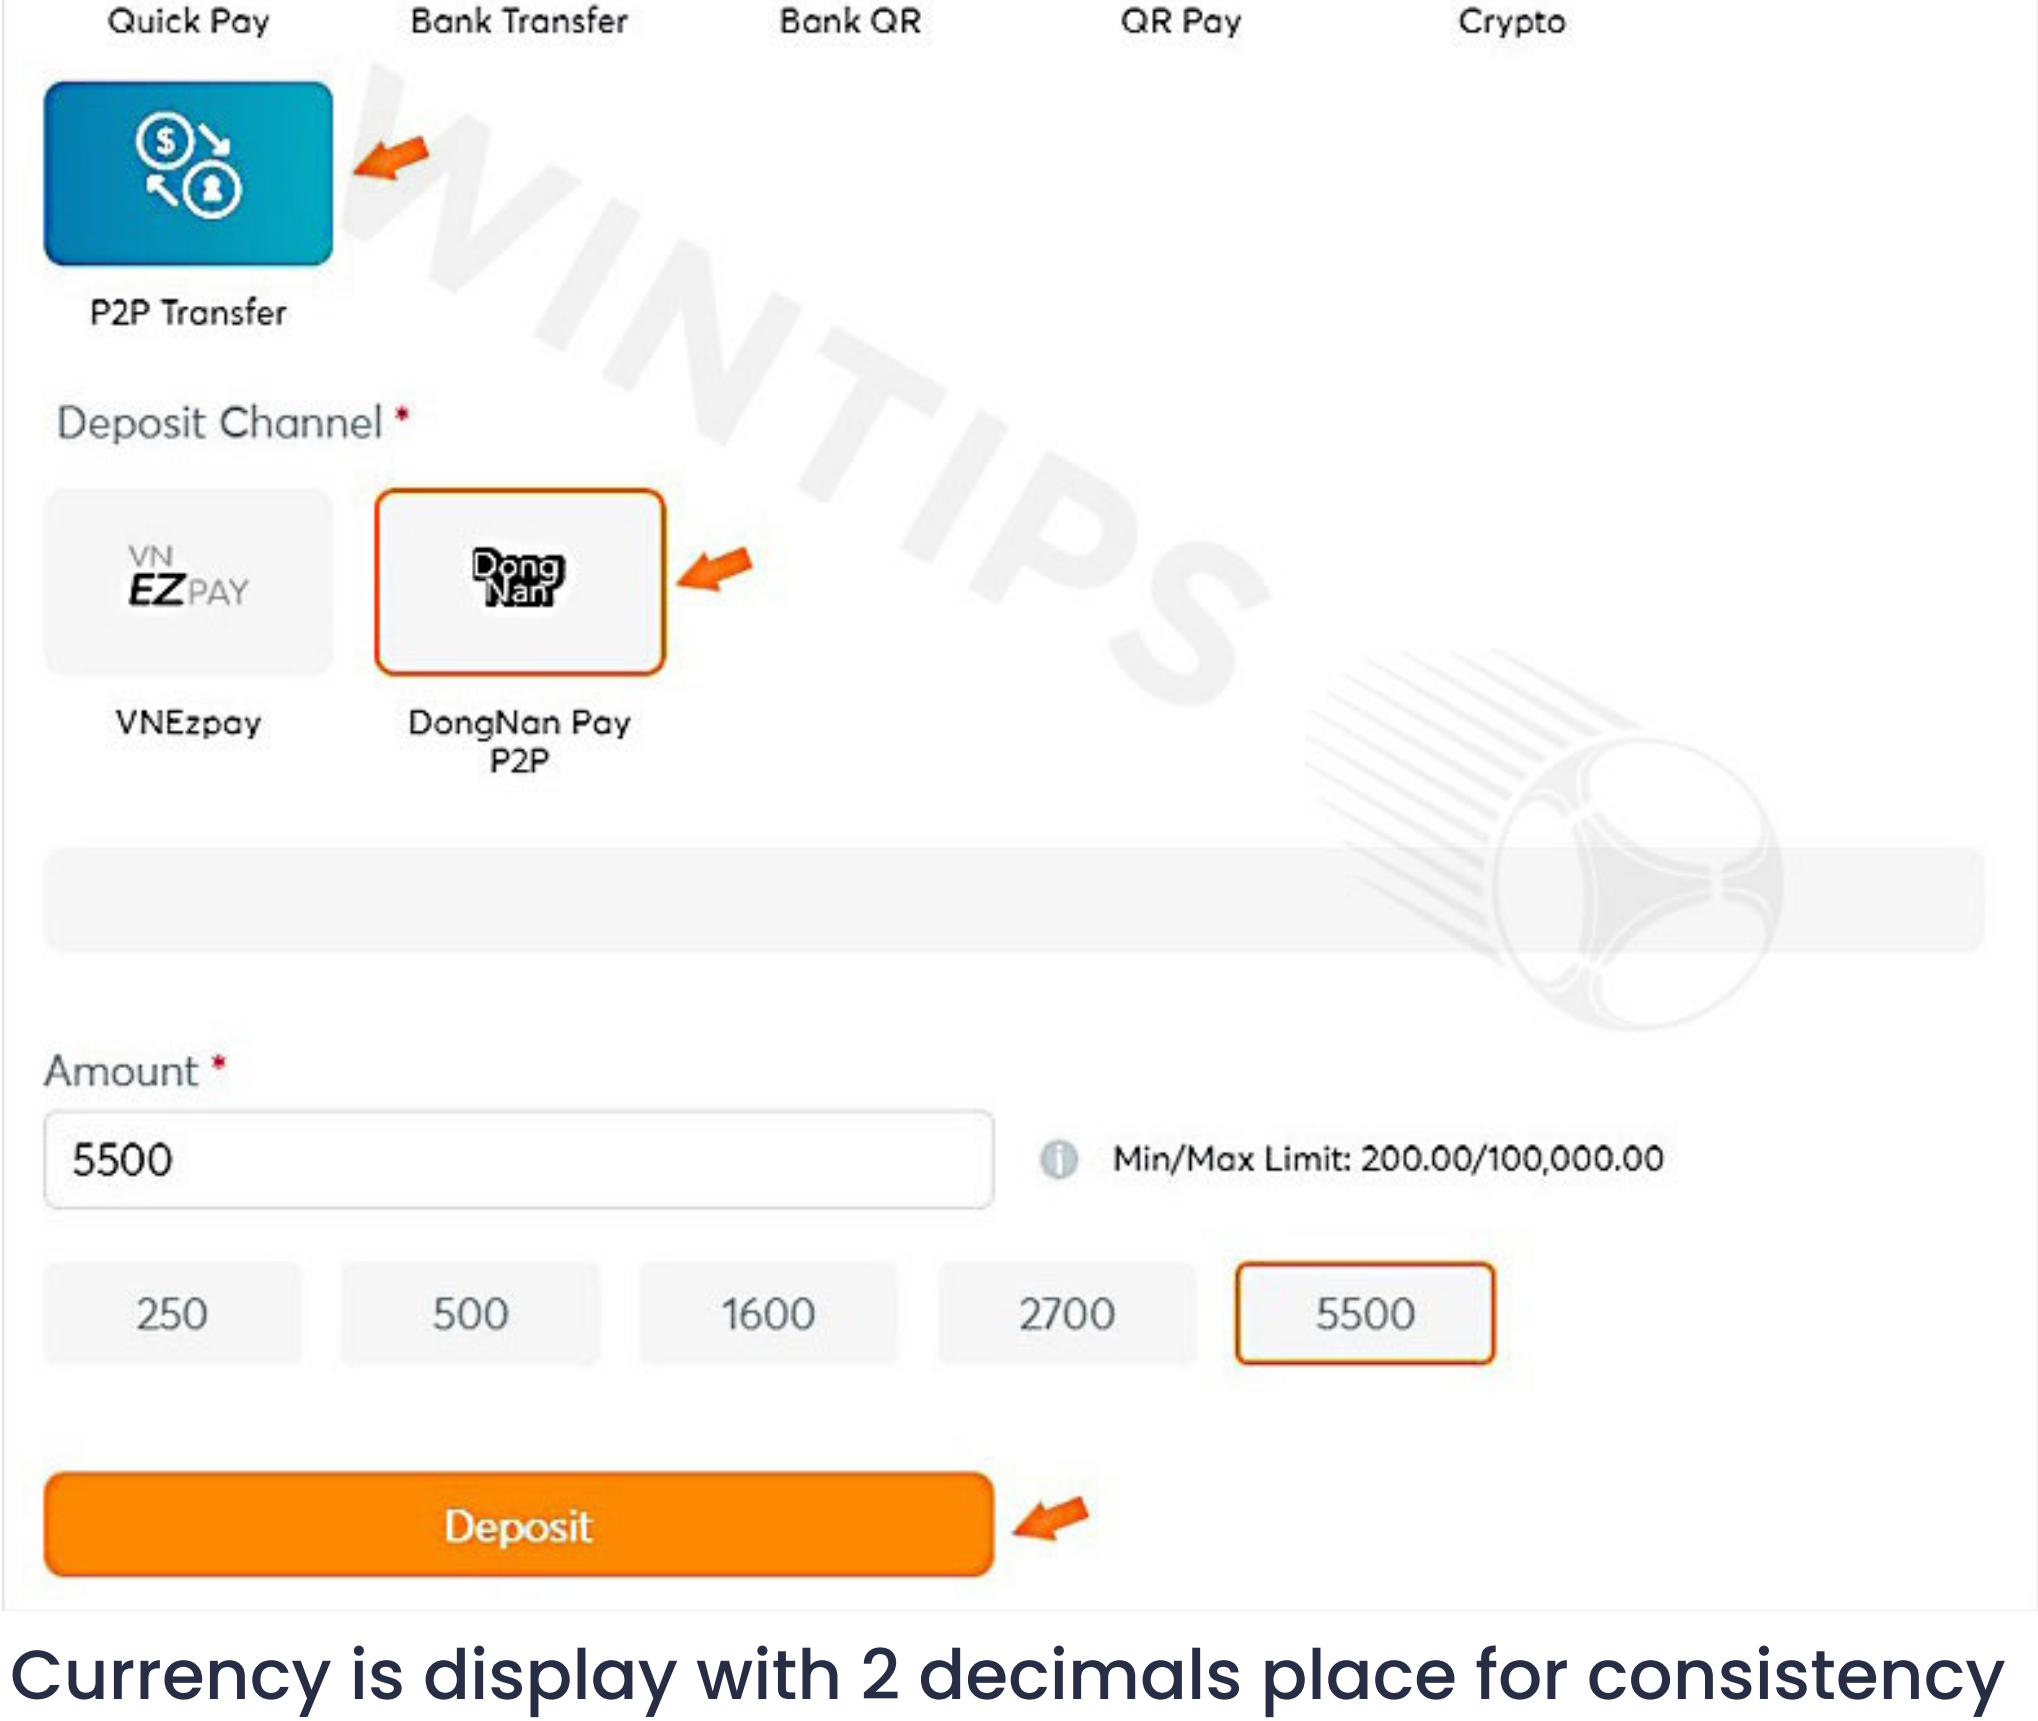

Cons: inconsistent height (coding issue)

Overlay menu

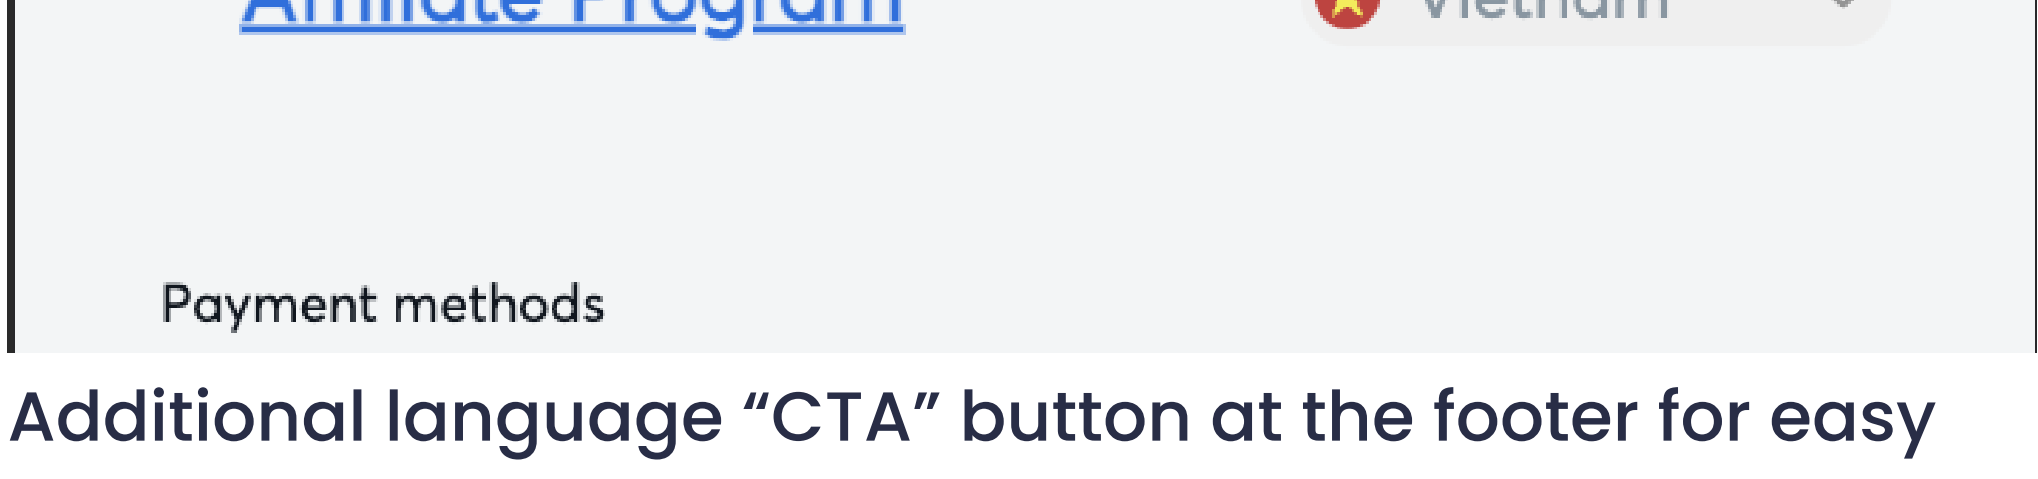

Language display is show according to region and language spoken. This is so as this website have localised version for each region.

This site does both having a localised version while translating multiple languages, which is wasting unneeded resources.

Currency is display with 2 decimals place for consistency with other currencies

Additional language “CTA” button at the footer for easy navigation, this make it easier for anyone to change language. Amount of taps needed:

“Menu > language > change language”

“CTA > change language”

Single Site Supporting Multiple Languages

Pros:

- Easier to maintain a single codebase and product
- Consistent brand experience across languages
- Lower infrastructure costs
- Easier to deploy global updates and features
- Potential SEO boost directing all traffic to one domain

Cons:

- Significant product translation costs
- Complex UI to account for long-form translations (Current Wali situation)
- Harder to maintain due to larger codebase
- Harder to localize content and customize features
- Can seem overly "generic" lacking regional adaptation

Multiple Localized Mirror Sites

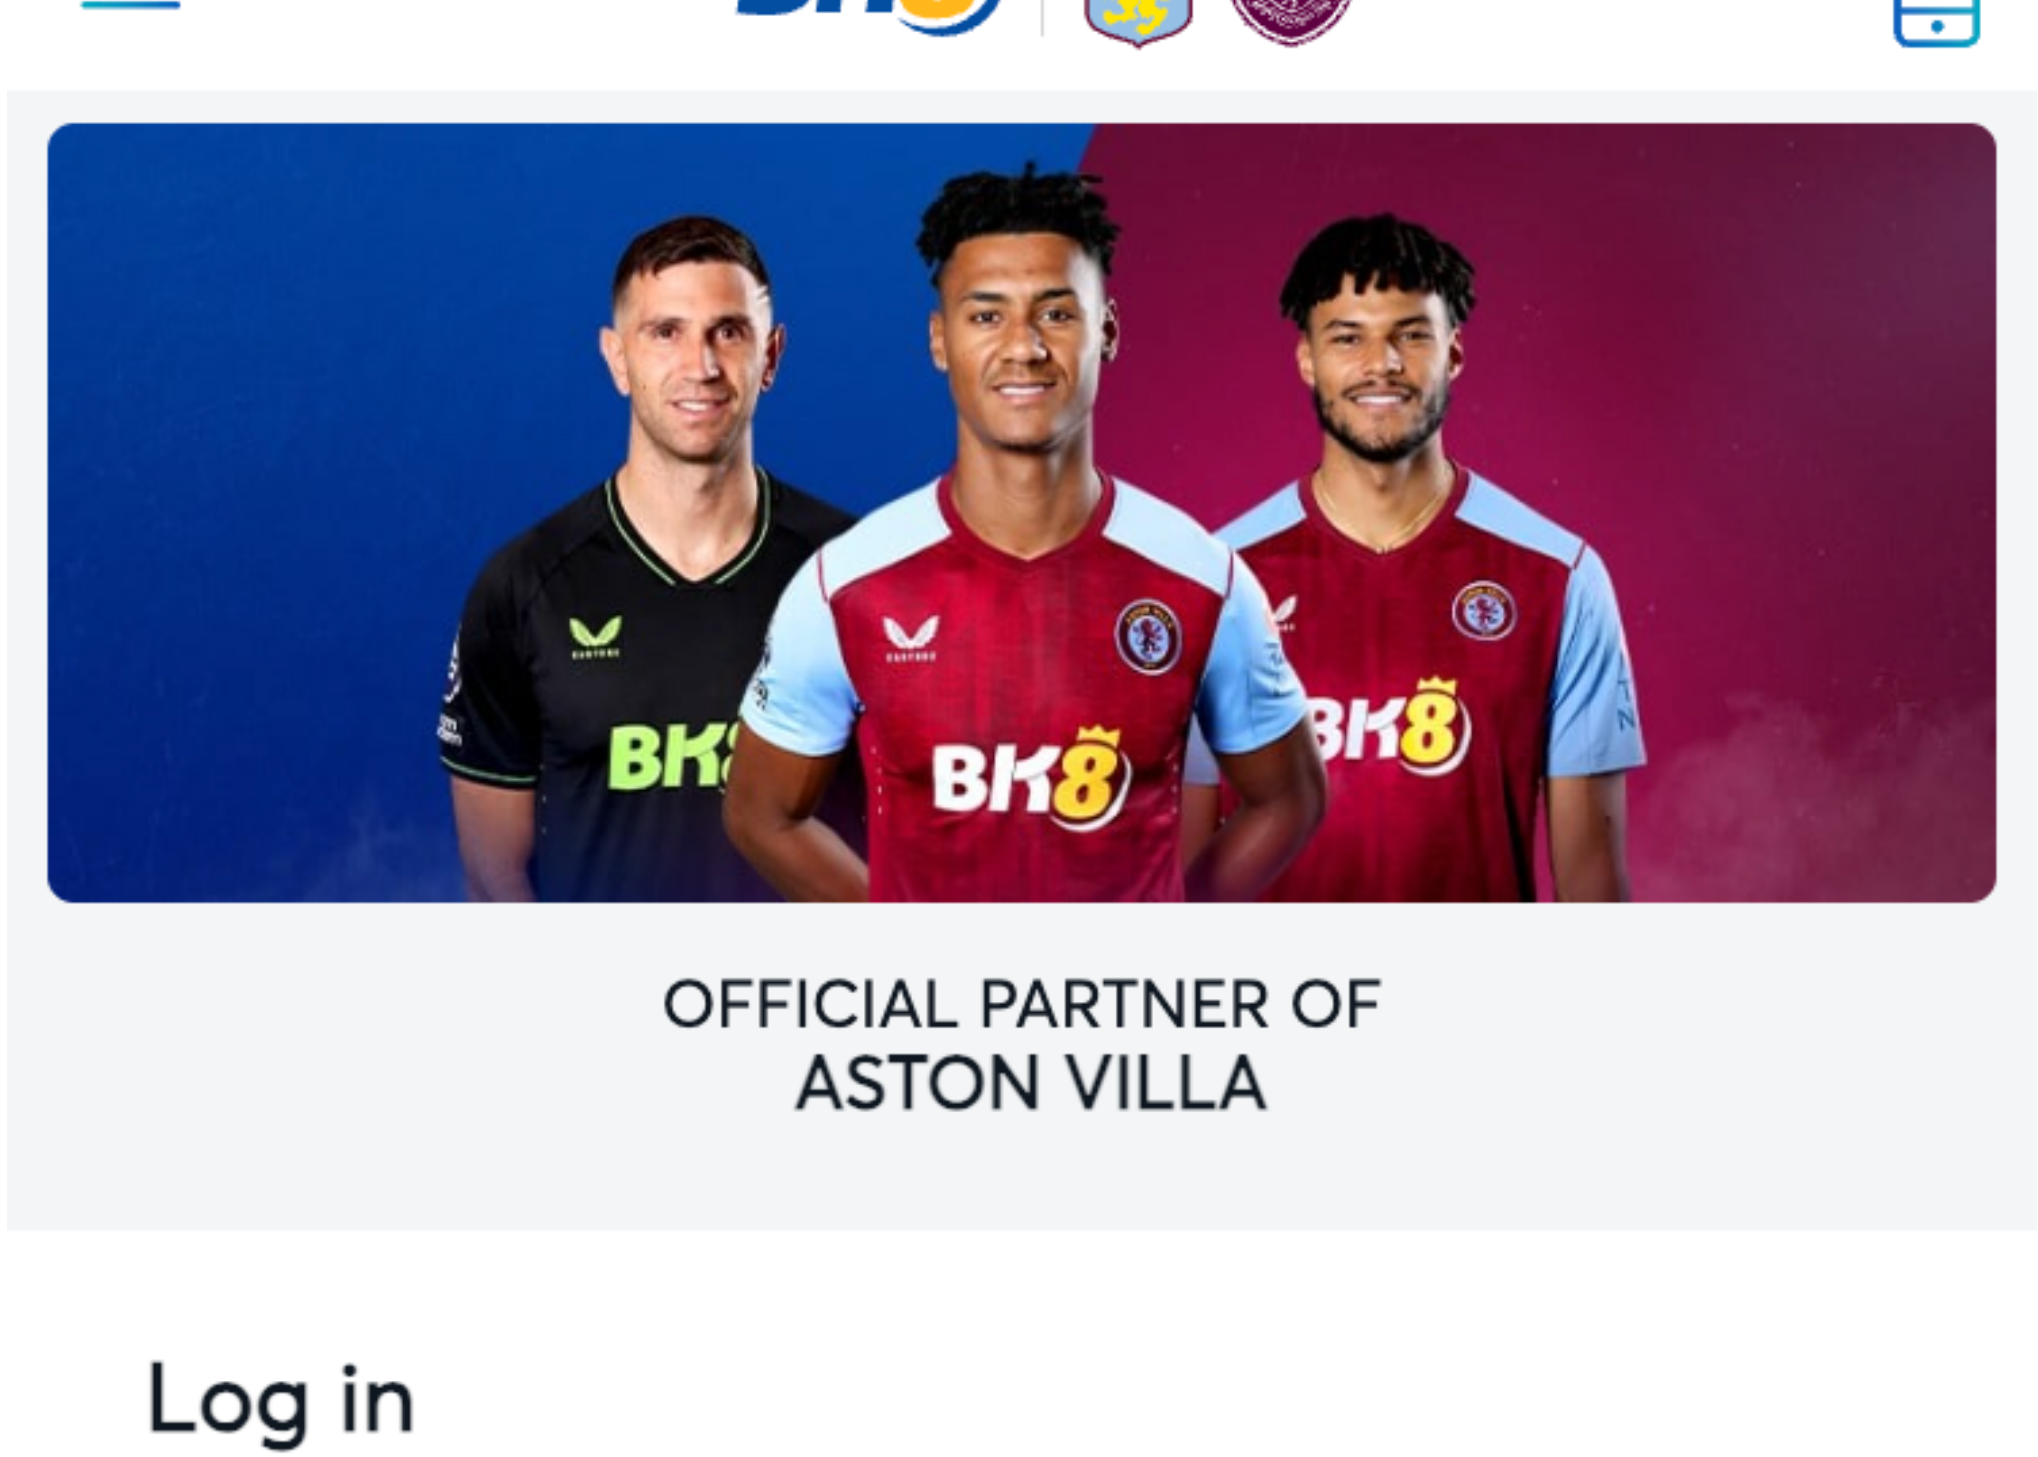

Pros:

- Customized user experiences per regions
- Adapt messaging, offerings, content per location
- Show localized business legitimacy and commitment
- Geo-targeted SEO strategy possible
- Compartmentalized teams and launch plans

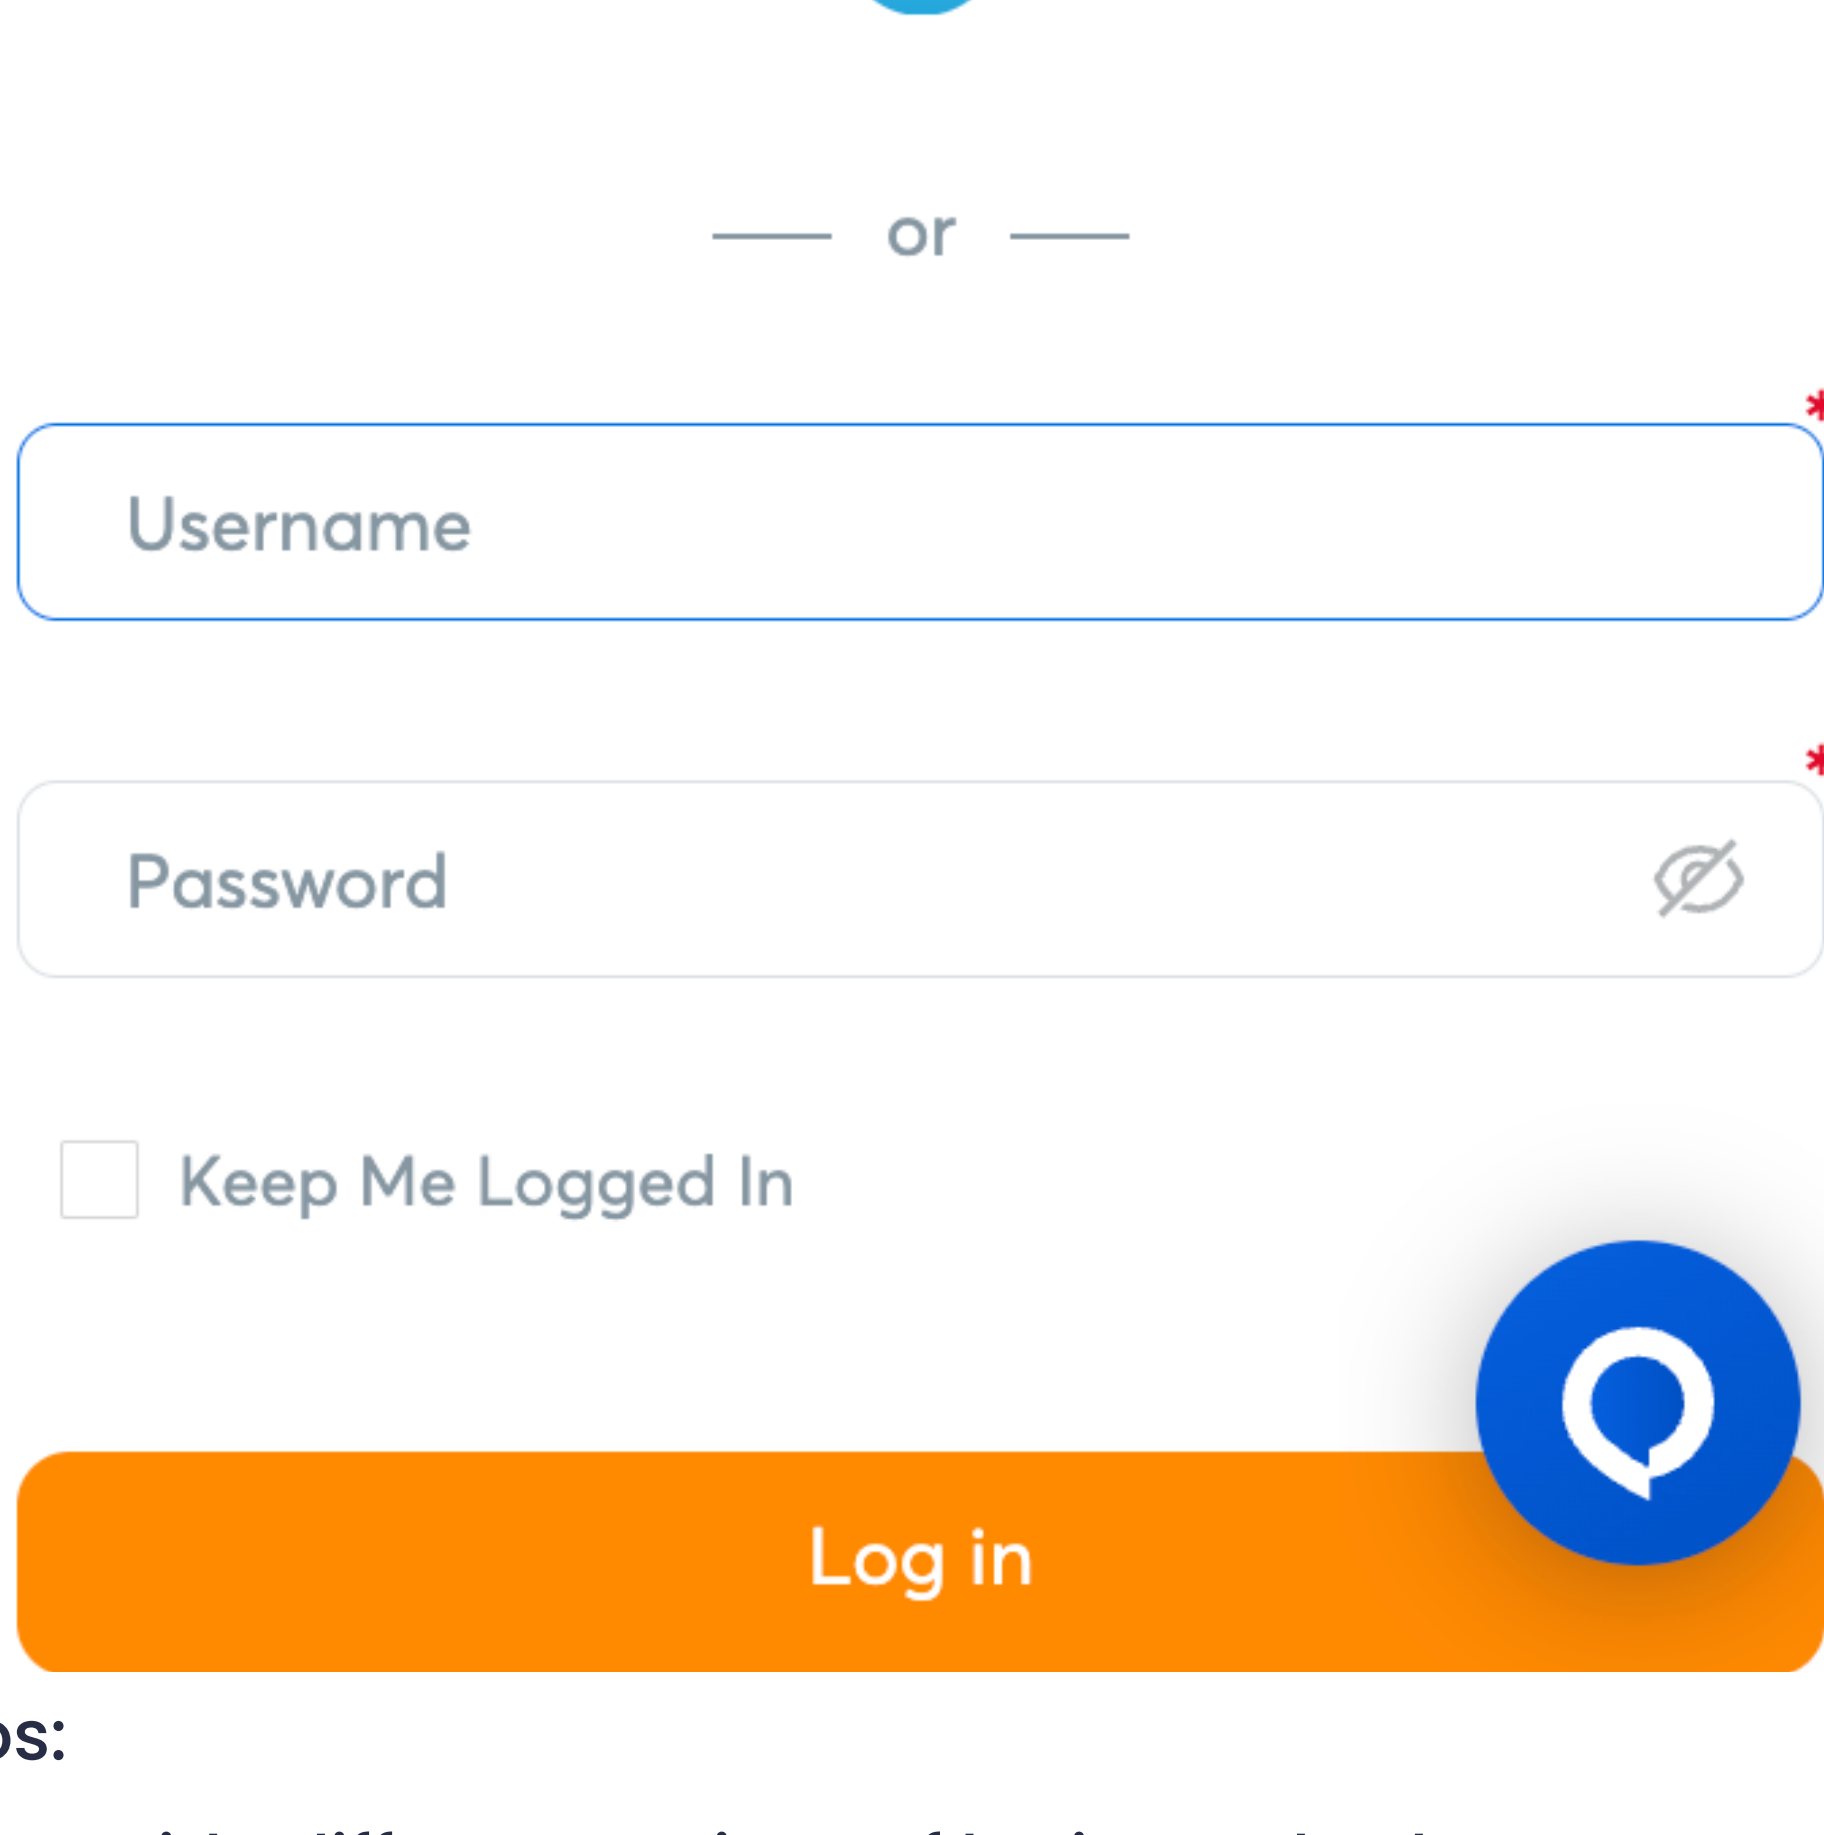

Cons:

- Higher governance and production overhead
- Codebase fragmentation risks with separate sites
- Duplicate effort updating and maintaining sites (if maintain by same team)
- Budget-intensive

Login Overlay menu

Log in

Pros:

- Provide different options of login method

Takeaway:

Website have clear hierarchy structure within each module, but too much font sizes causing inconsistency. Well translated in terms of taking account into vietnamese length and design space. (They didnt force a translation as they kept some mix of english and vietnamese words to allow spacing for design.)

Competitor Analysis

Competitor 2

1XBET

Fonts Family

Roboto, Roboto Condensed

Roboto for title, headline

Condensed for caption, subtitle and smaller texts

Font Sizes (px from rem)

- 32.48 px
- 19.72 px
- 18.56 px
- 17 px
- 16.24 px
- 16 px
- 15.08 px
- 14px
- 13.92 px
- 12.76 px
- 11.6 px

Font Weight

- variable font type

\*in mobile screen smallest width of 320px they root font size of 16px as 1rem

UI pros & cons

Pros:

- Good usage of color contrast
- Easy to understand that this a slider
- reusable component

Cons:

- Too much horizontal due to over-scroll (odds, match versus name)long width of texts affect main slider navigation. E.g. when scrolling right may scroll onto the odds

Overlay menu

This is a single site supporting multiple languages. In terms of ui/ux this website uses a simple picker which allow users to scroll and select their preferred language.

Pros: Simple and effective method

Cons: Too much scrolling to do and not prominent enough

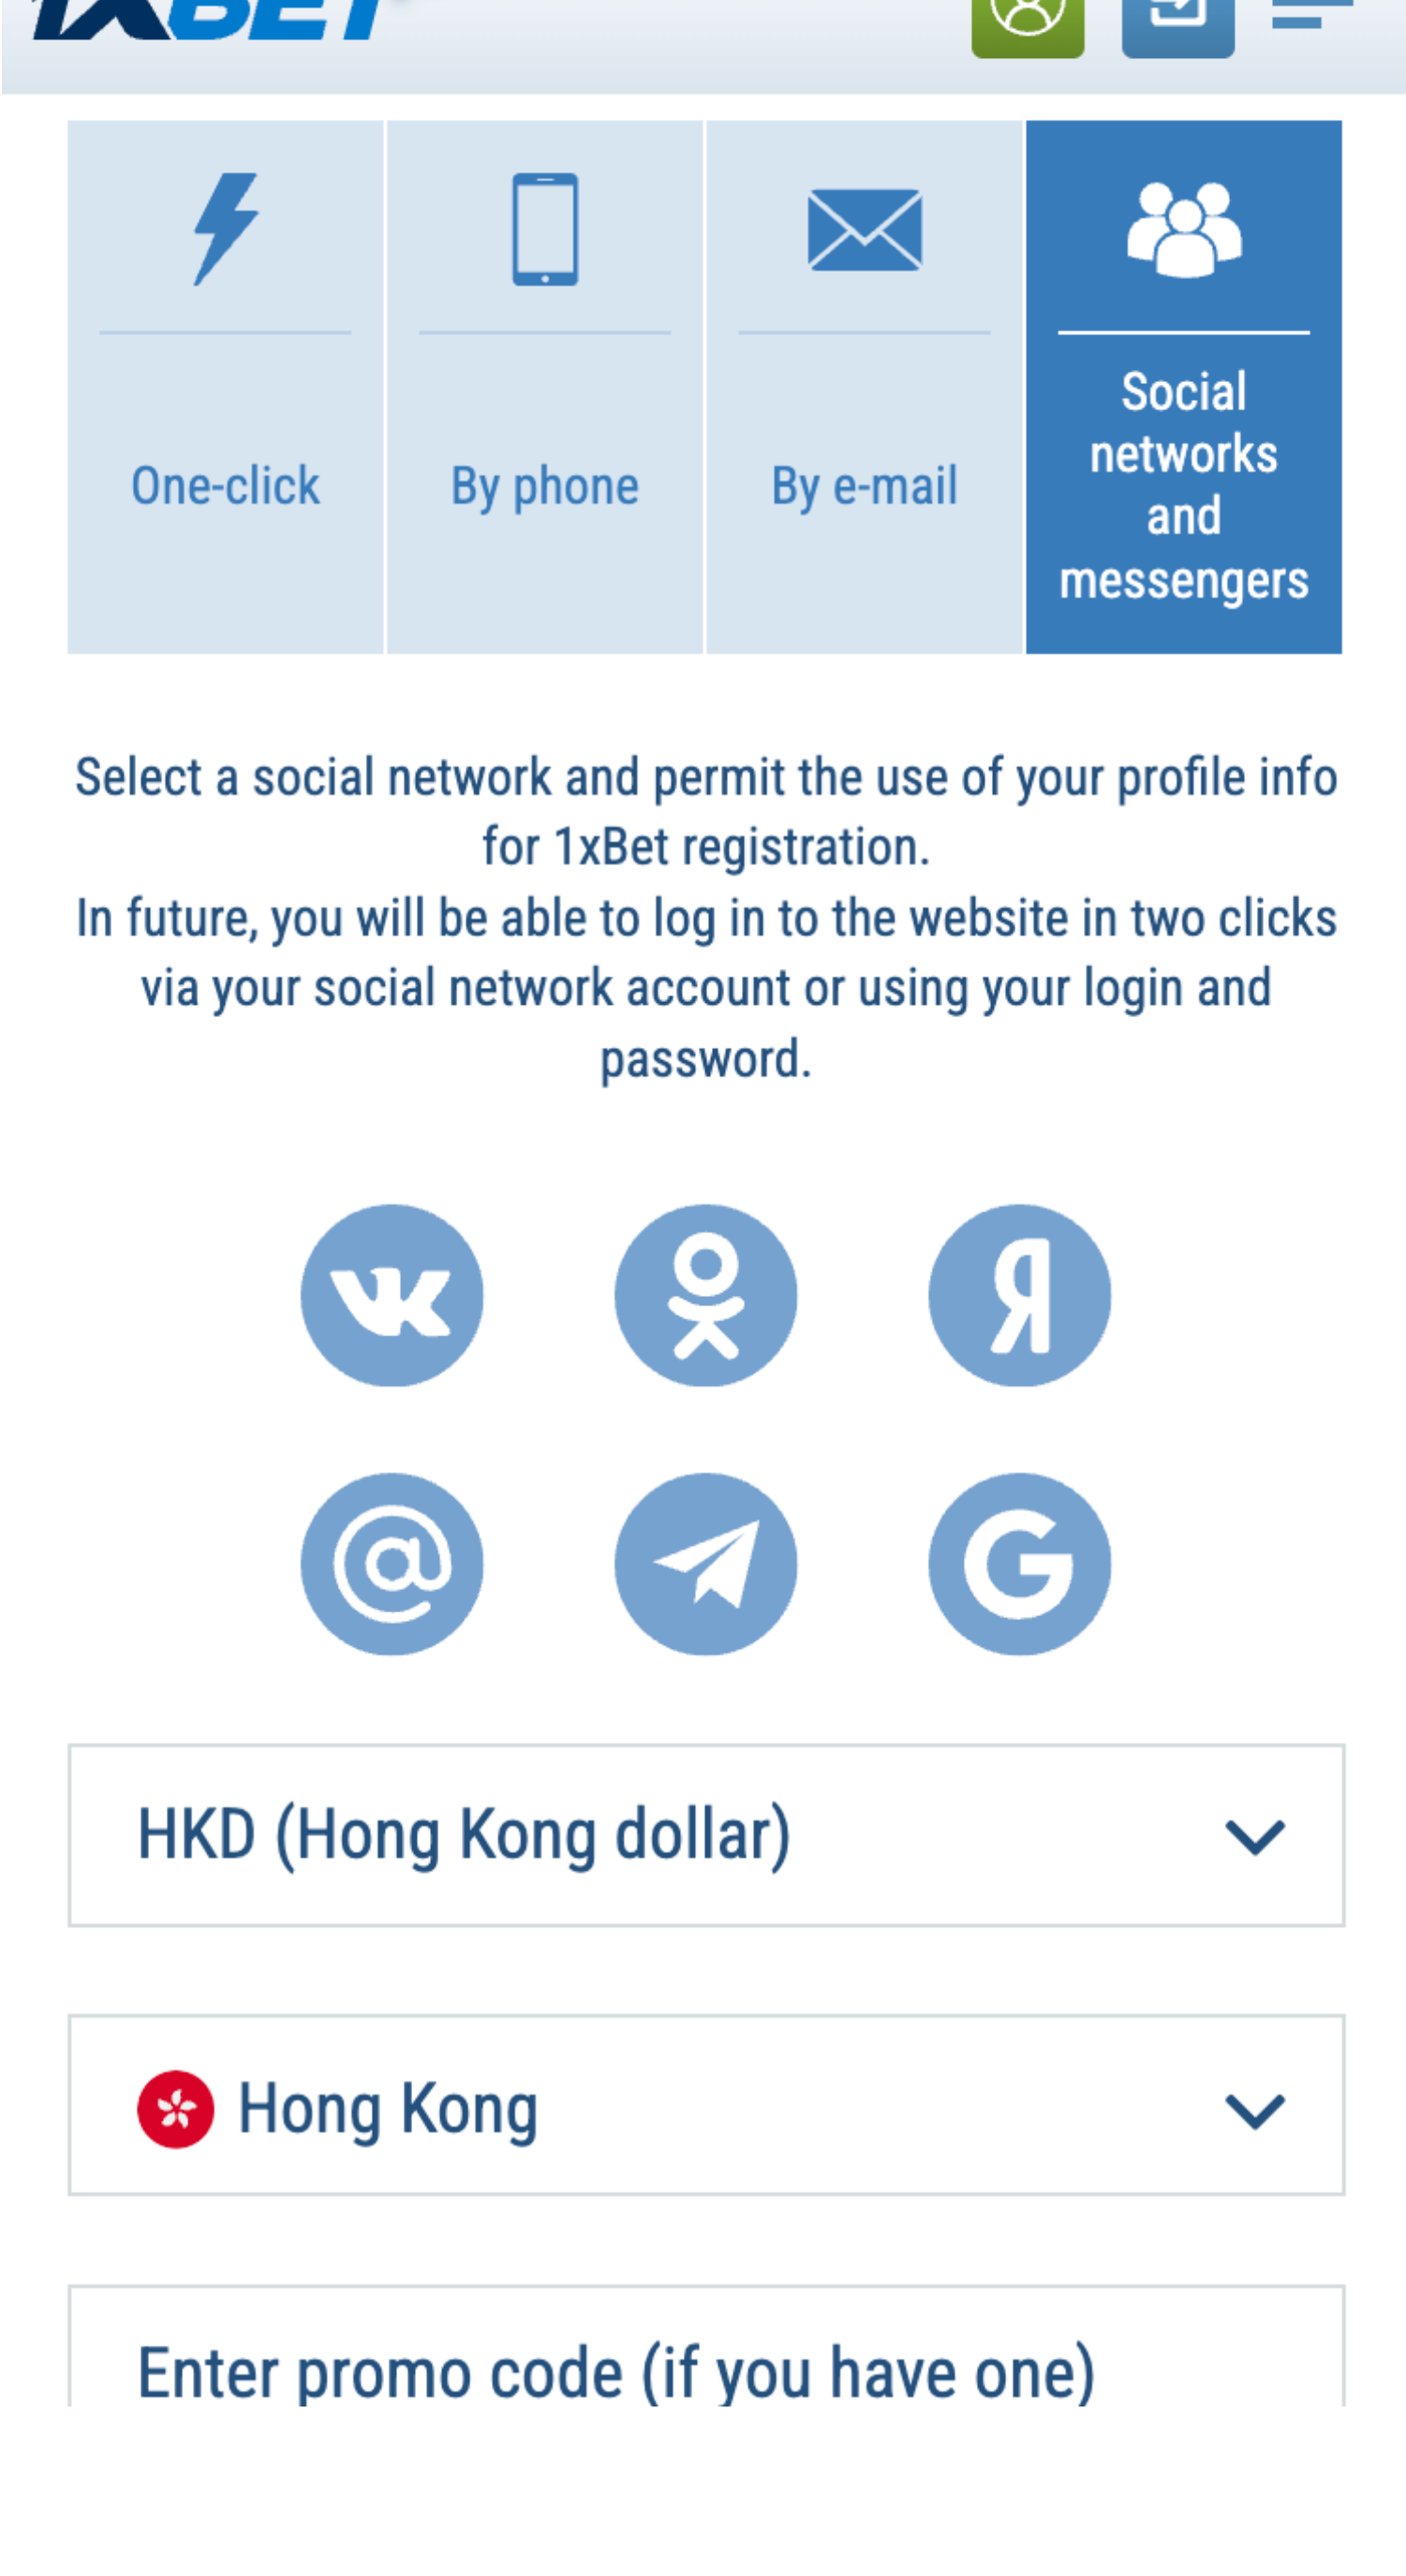

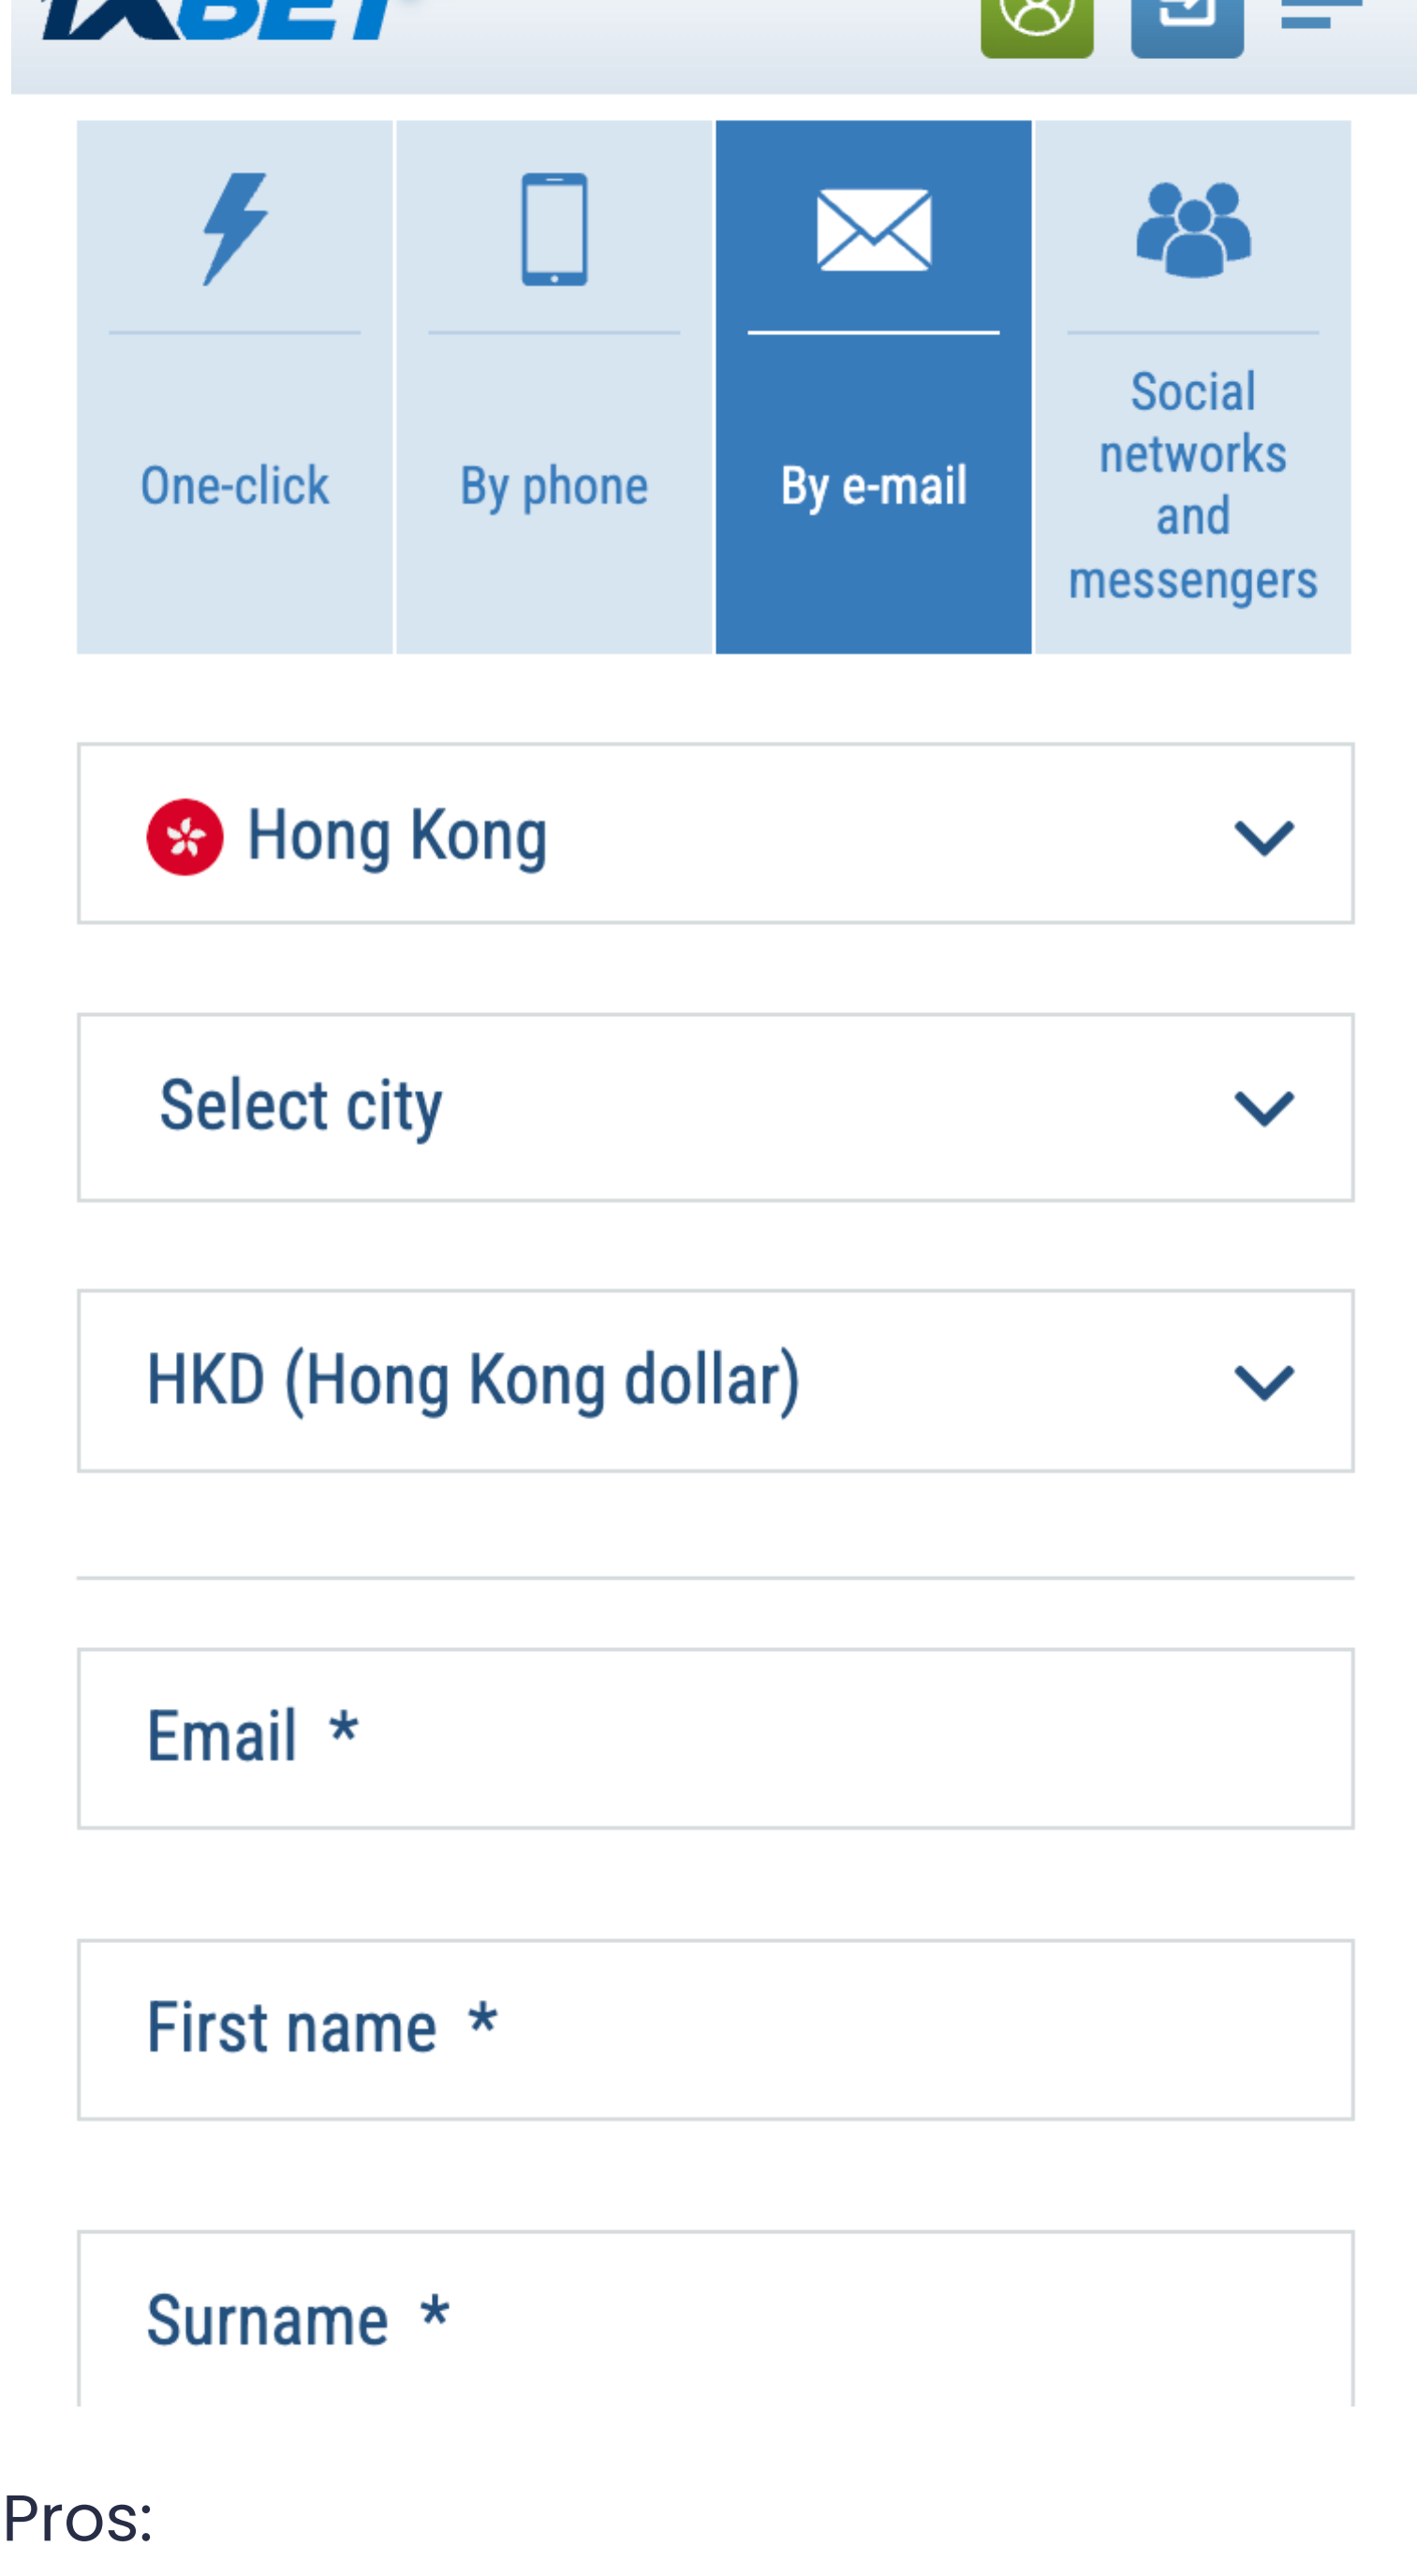

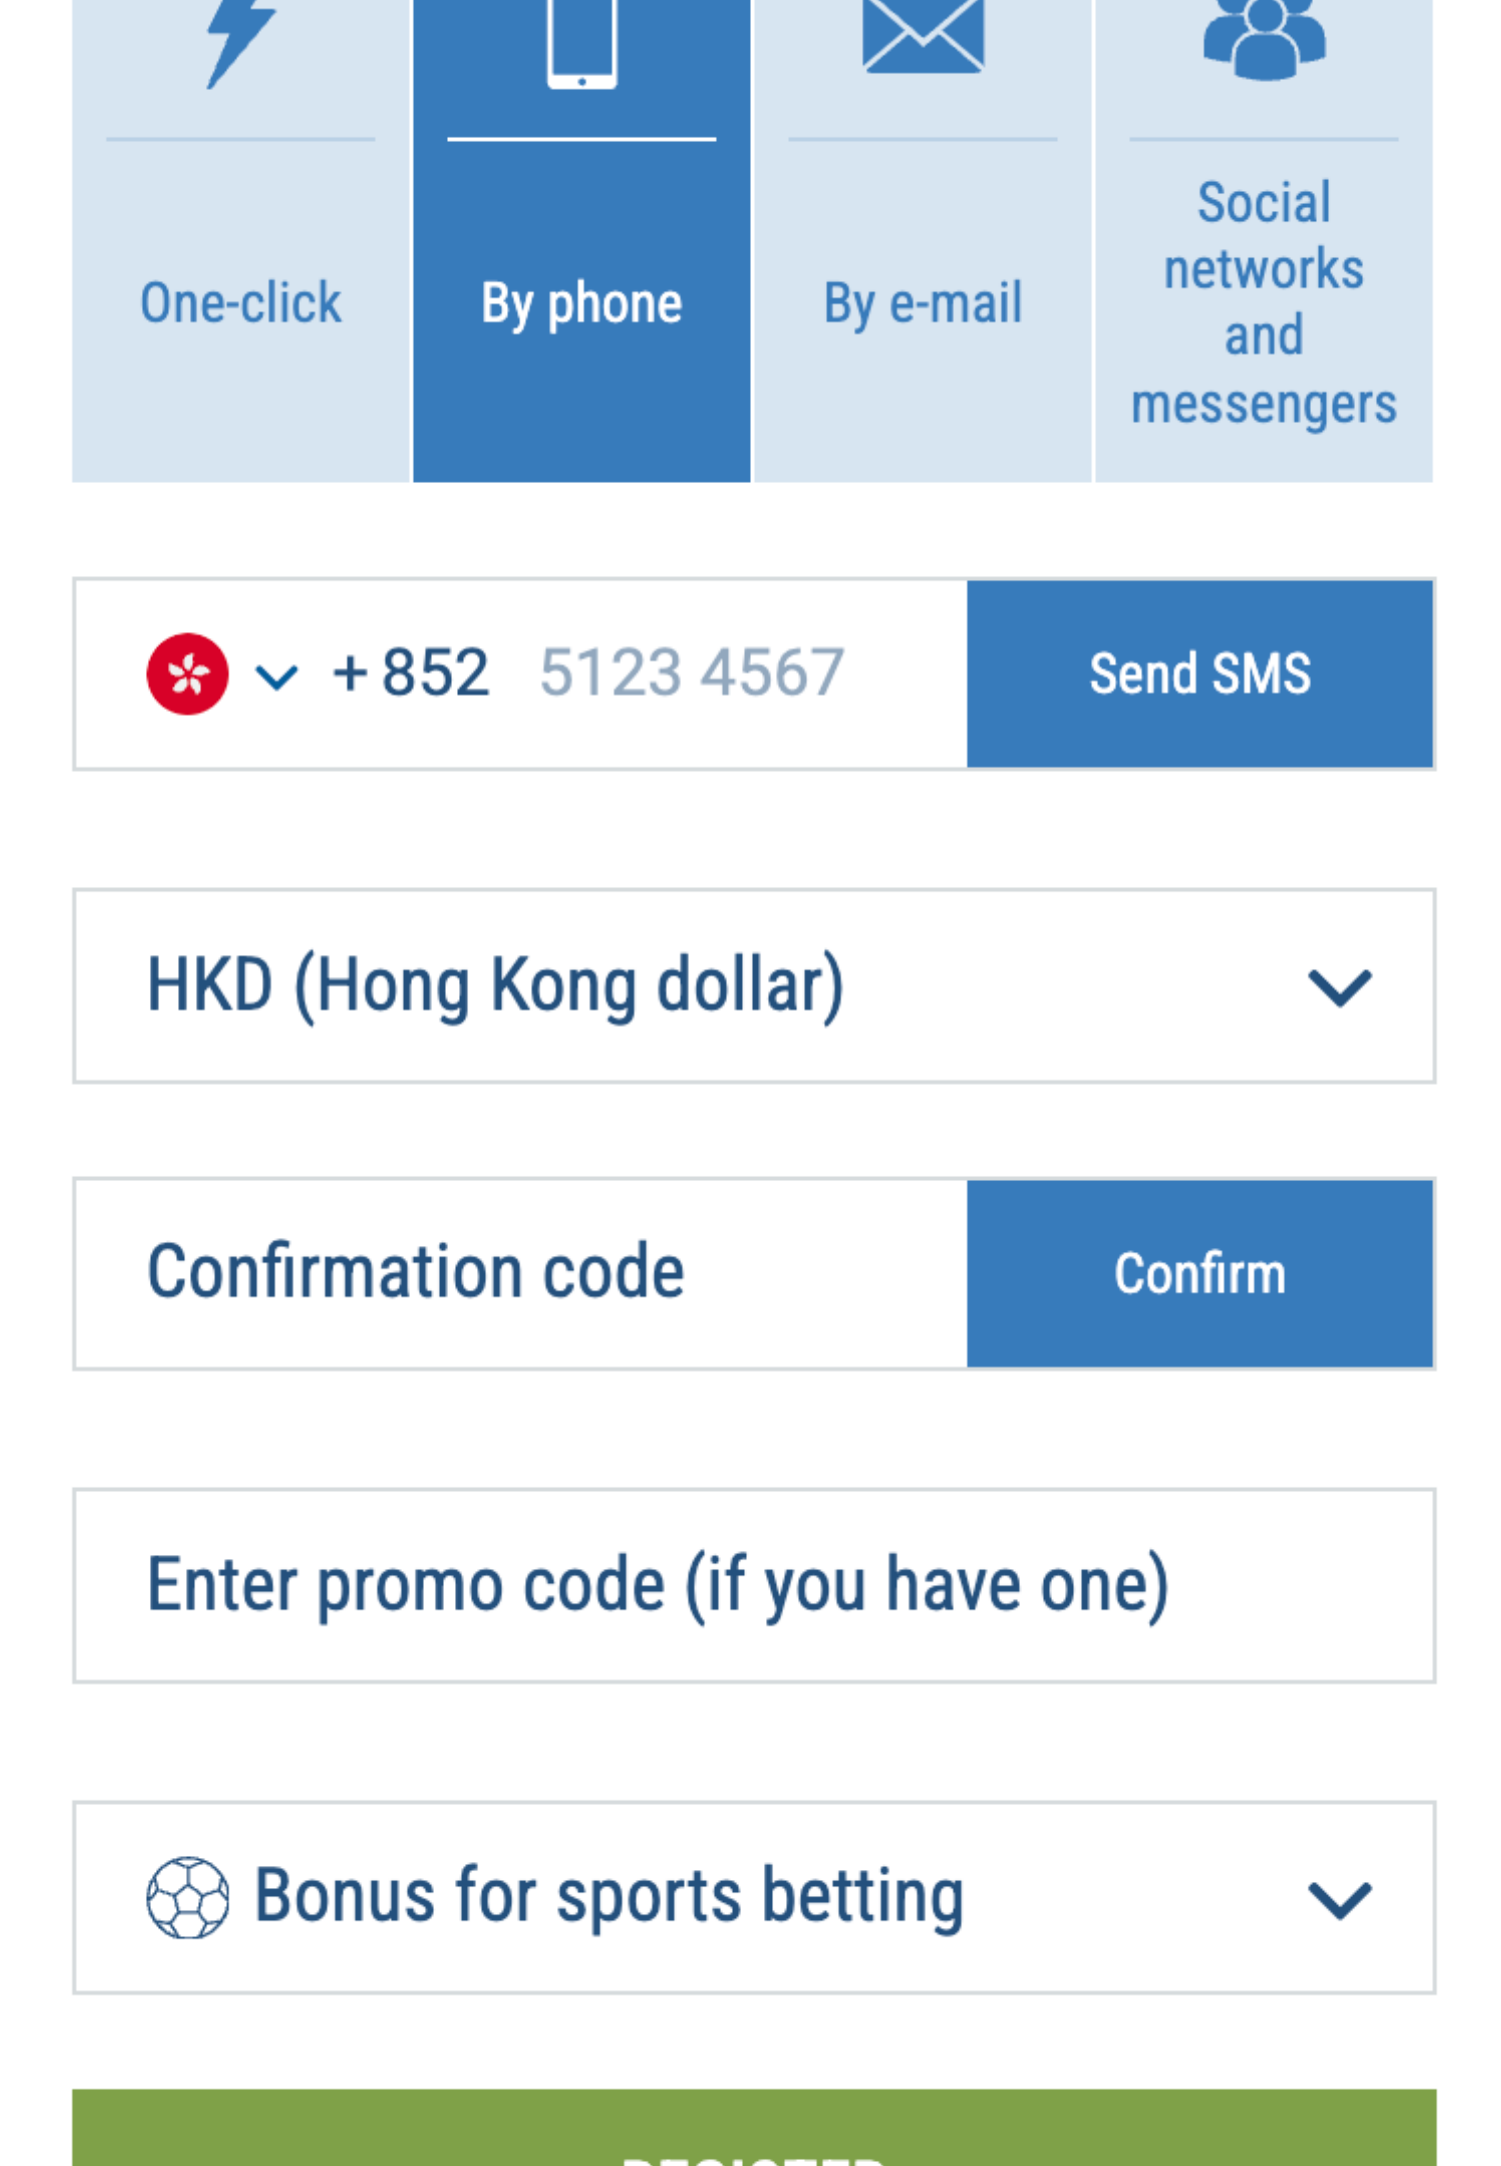

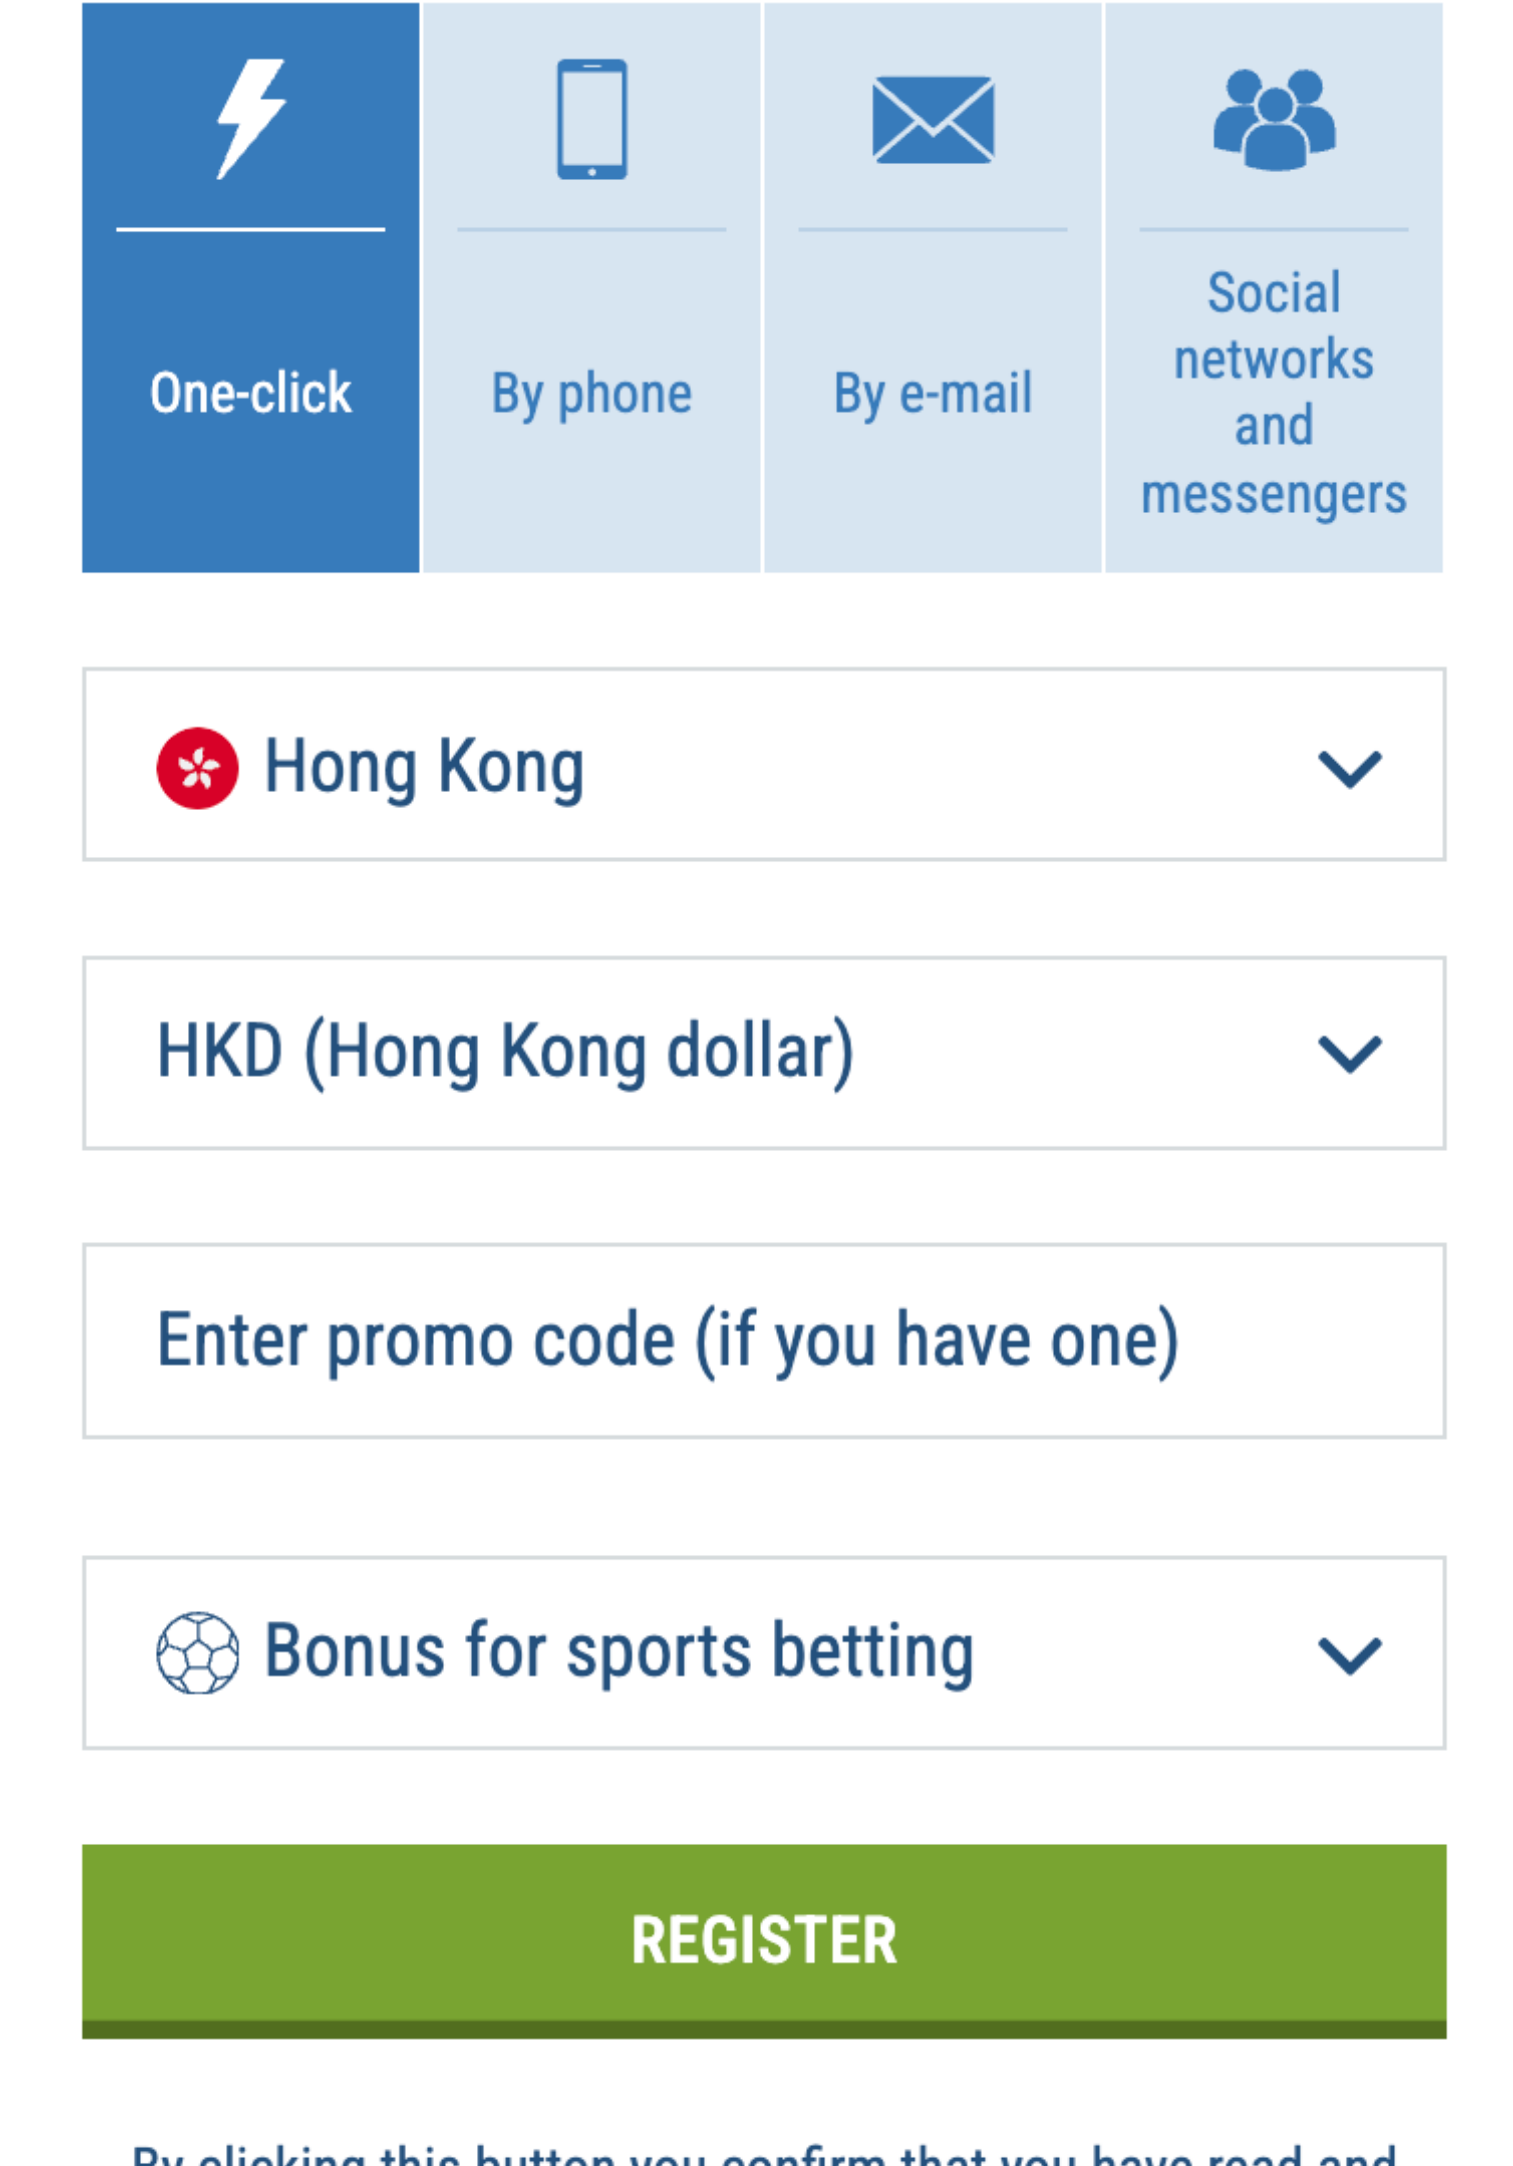

Betting page ui alert

Overlay alert at the bottom of the page clear and simple indication when you going to make a bet/ or save ur bet as draft.

All Currency is display with 2 decimals place regardless this help simplified the backend data without the need to convert.

Login overlay

Pros:

Simple and fast with multiple registration process, bring in lots of convenience to customers

Takeaway:

- website uses simple and clean design for UI
- websites provide many betting options but there is a learning curve, newcomers may get overwhelm.
- Allow cryptocurrency betting
- can bet via telegram
- Lots of registration options
- design look outdated

# Competitor Analysis

## Competitor 3

BC.GAME

## Fonts Family

Inter

Mostly using Inter fonts, with –apple–system as fallback font.

## Font Sizes (px from rem)

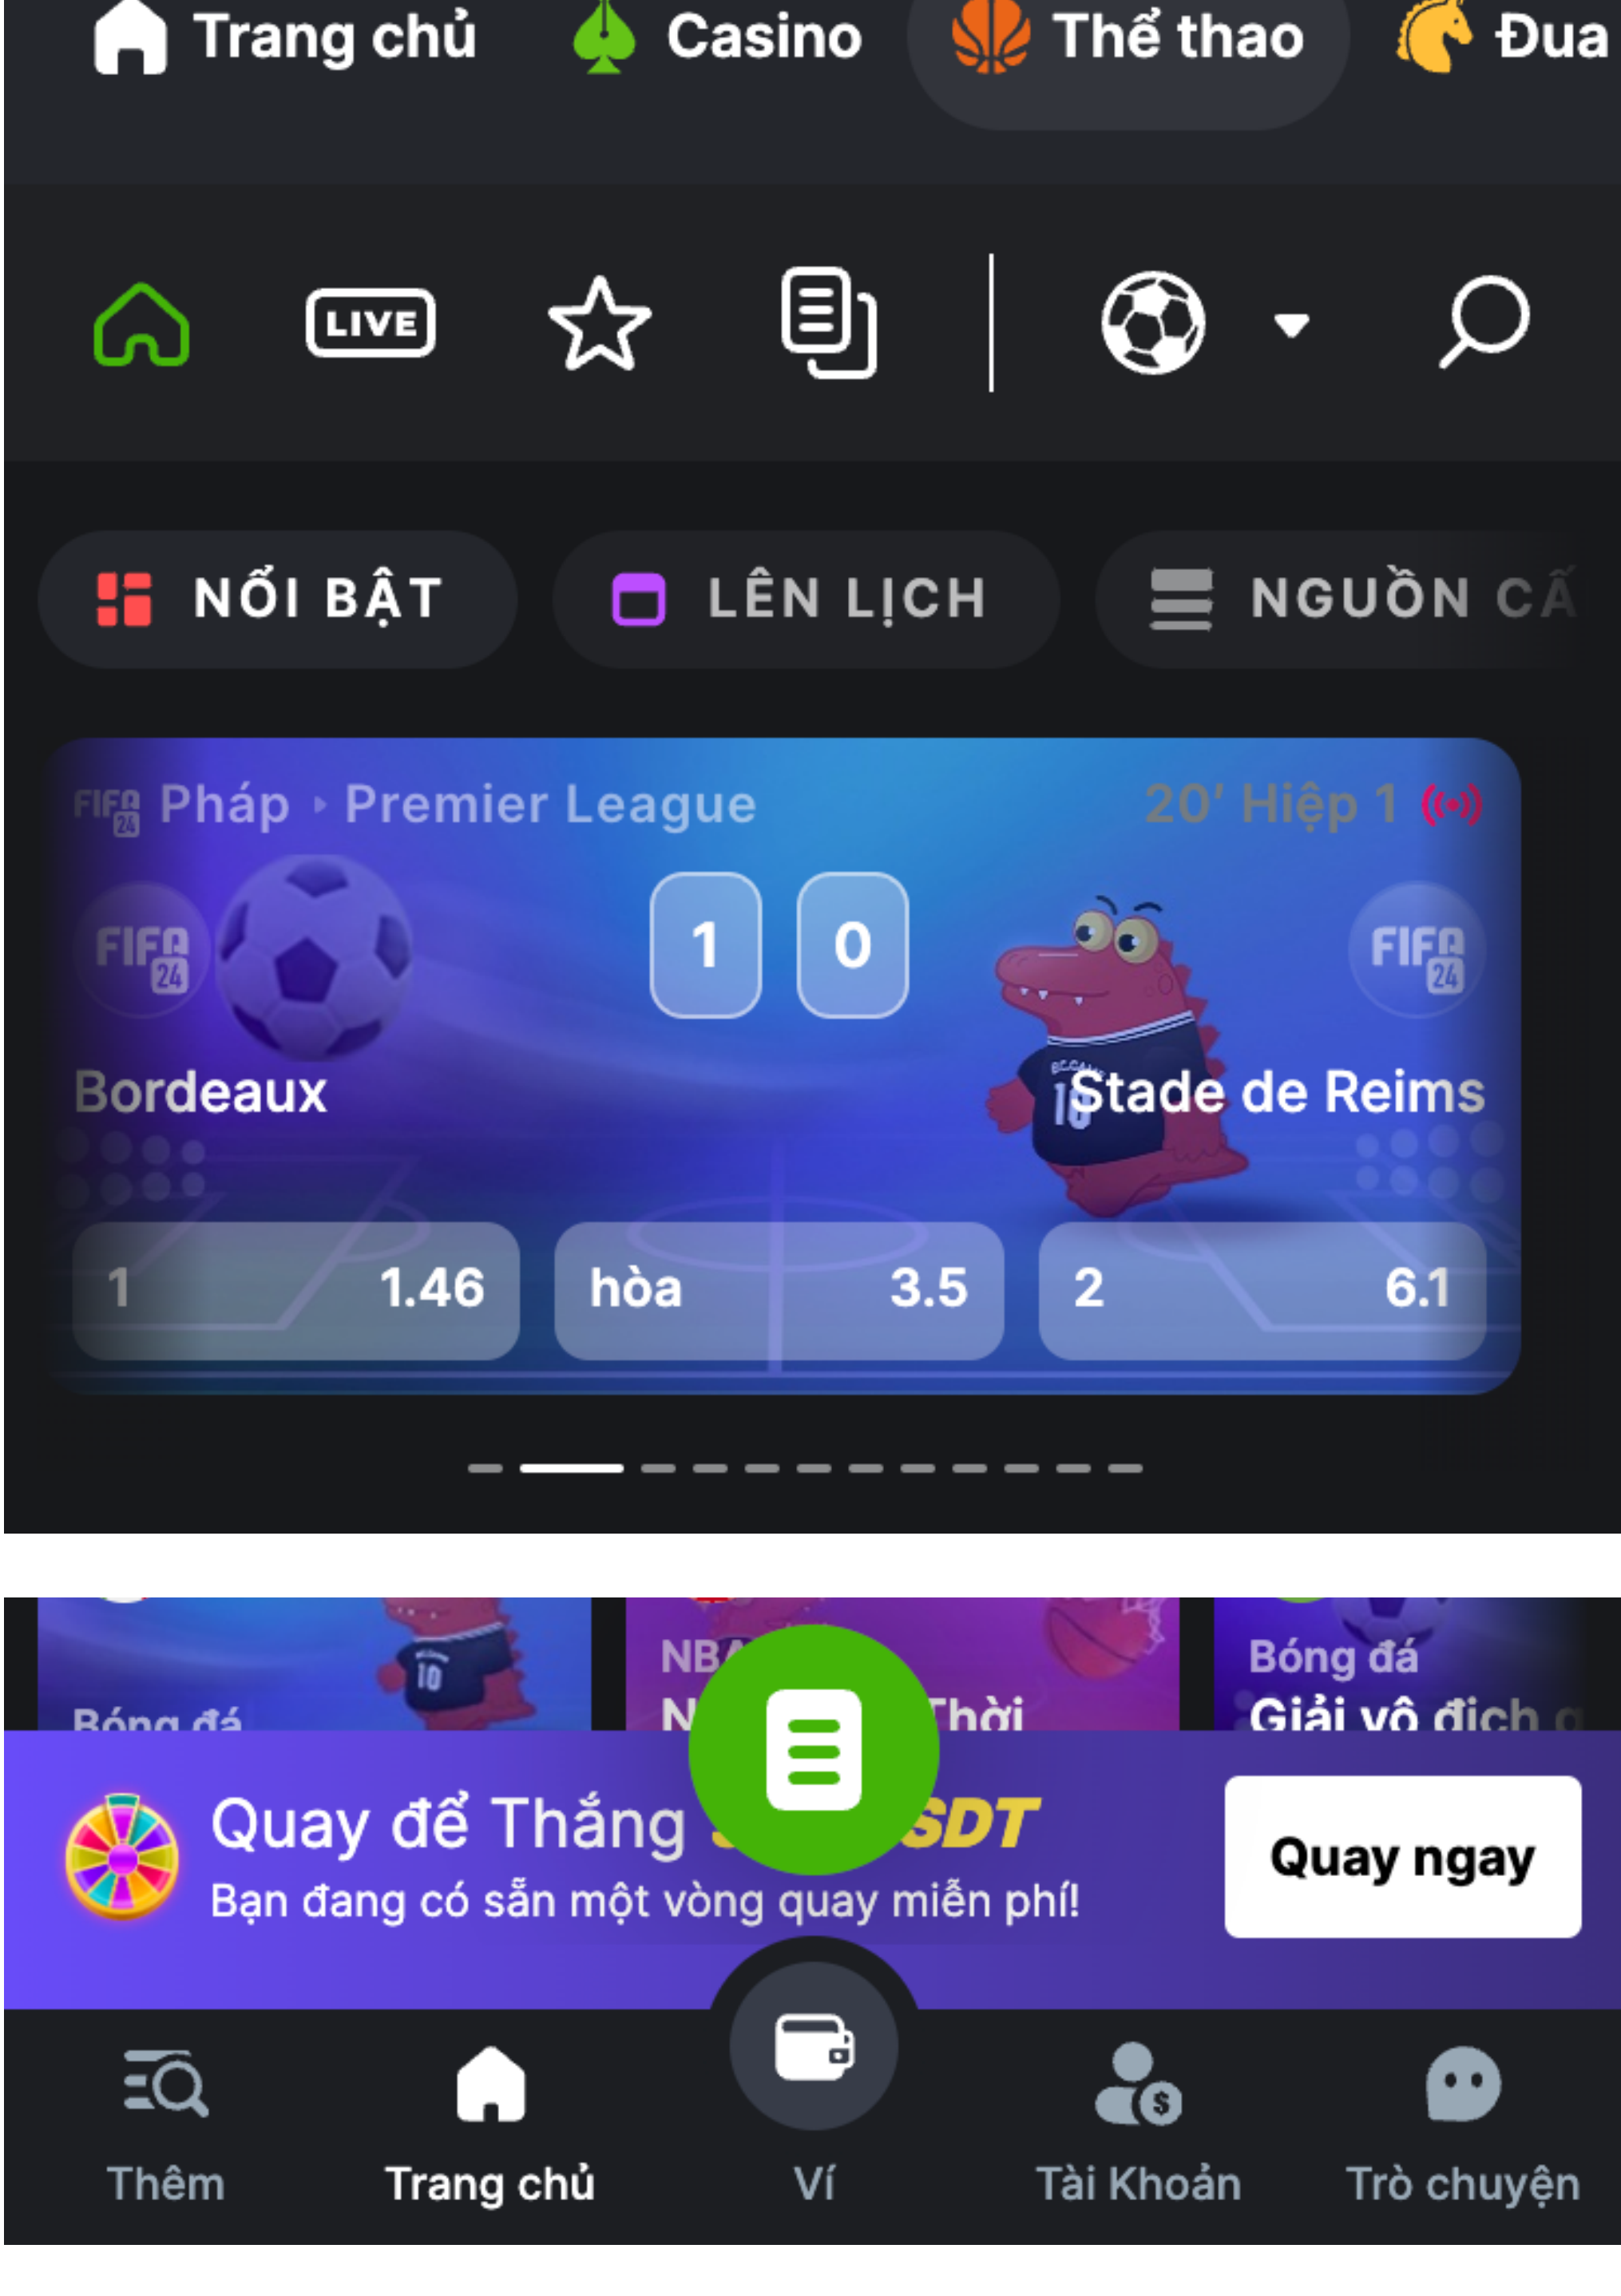

- 18px
- 17.045px
- 16px
- 15.340px
- 13.636px
- 11.931px
- 10.227px
- 9.375px

## Font Weight

- 400 / regular
- 600 / semi-bold
- 700 / bold

*\*in mobile screen smallest width of 320px they root font size of 16px as 1rem*

## UI pros & cons

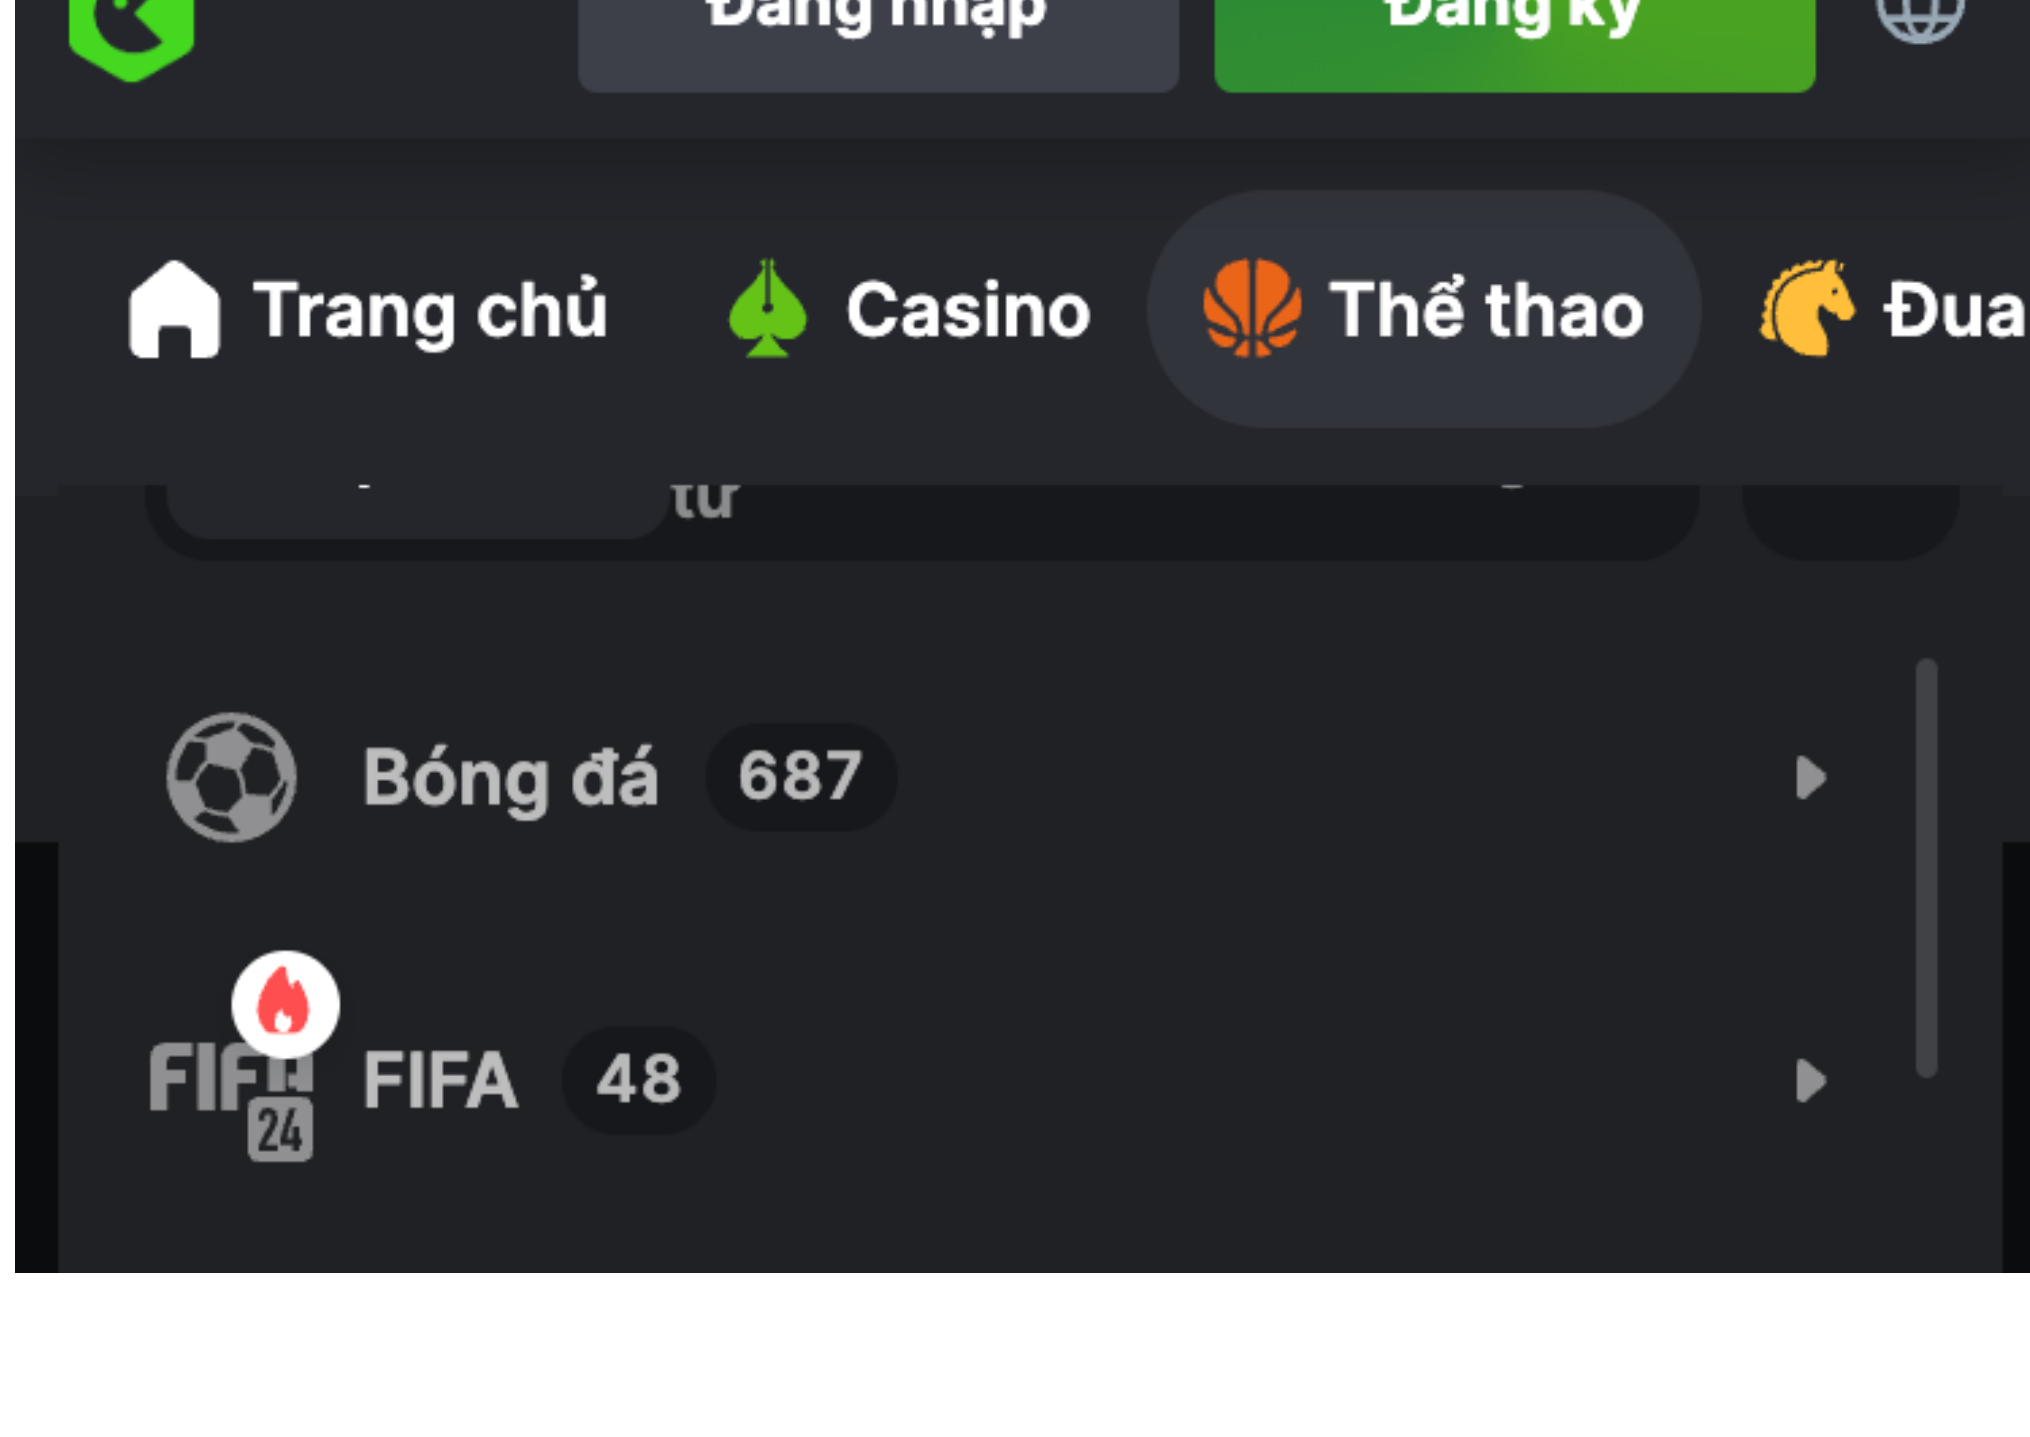

Pros:

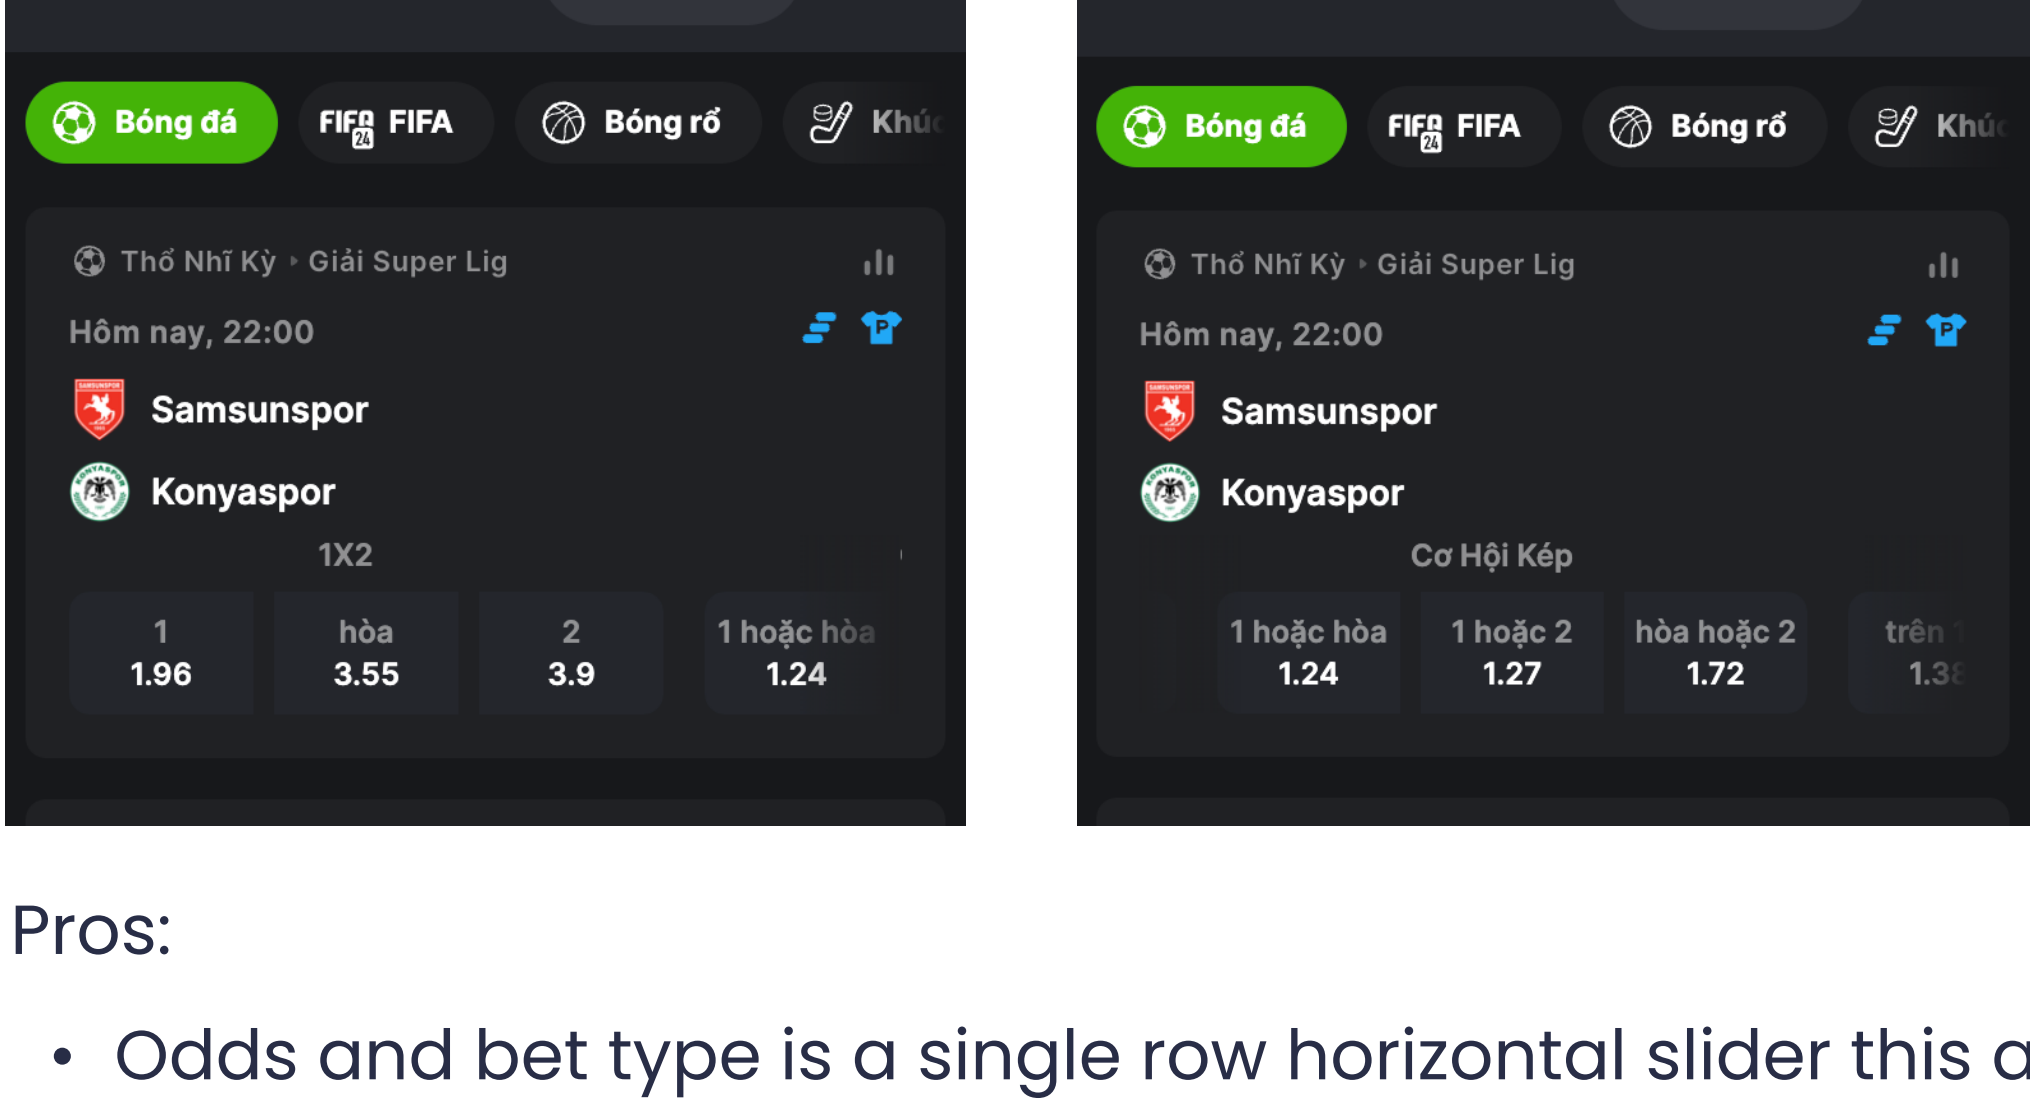

- Featured/Highlighted match component appeal to the eyes with it color
- Quickly navigate through popular matches (past, current, upcoming)
- reusable featured component
- highlighted bet slip

Cons:

- Odds could be improved by giving it more contrast for clarity
- Fifa24 icon is being use on different instances, e.g. team logo placeholder, category represent football, represent league. This cause confusion, refer image below.

## Single betting module

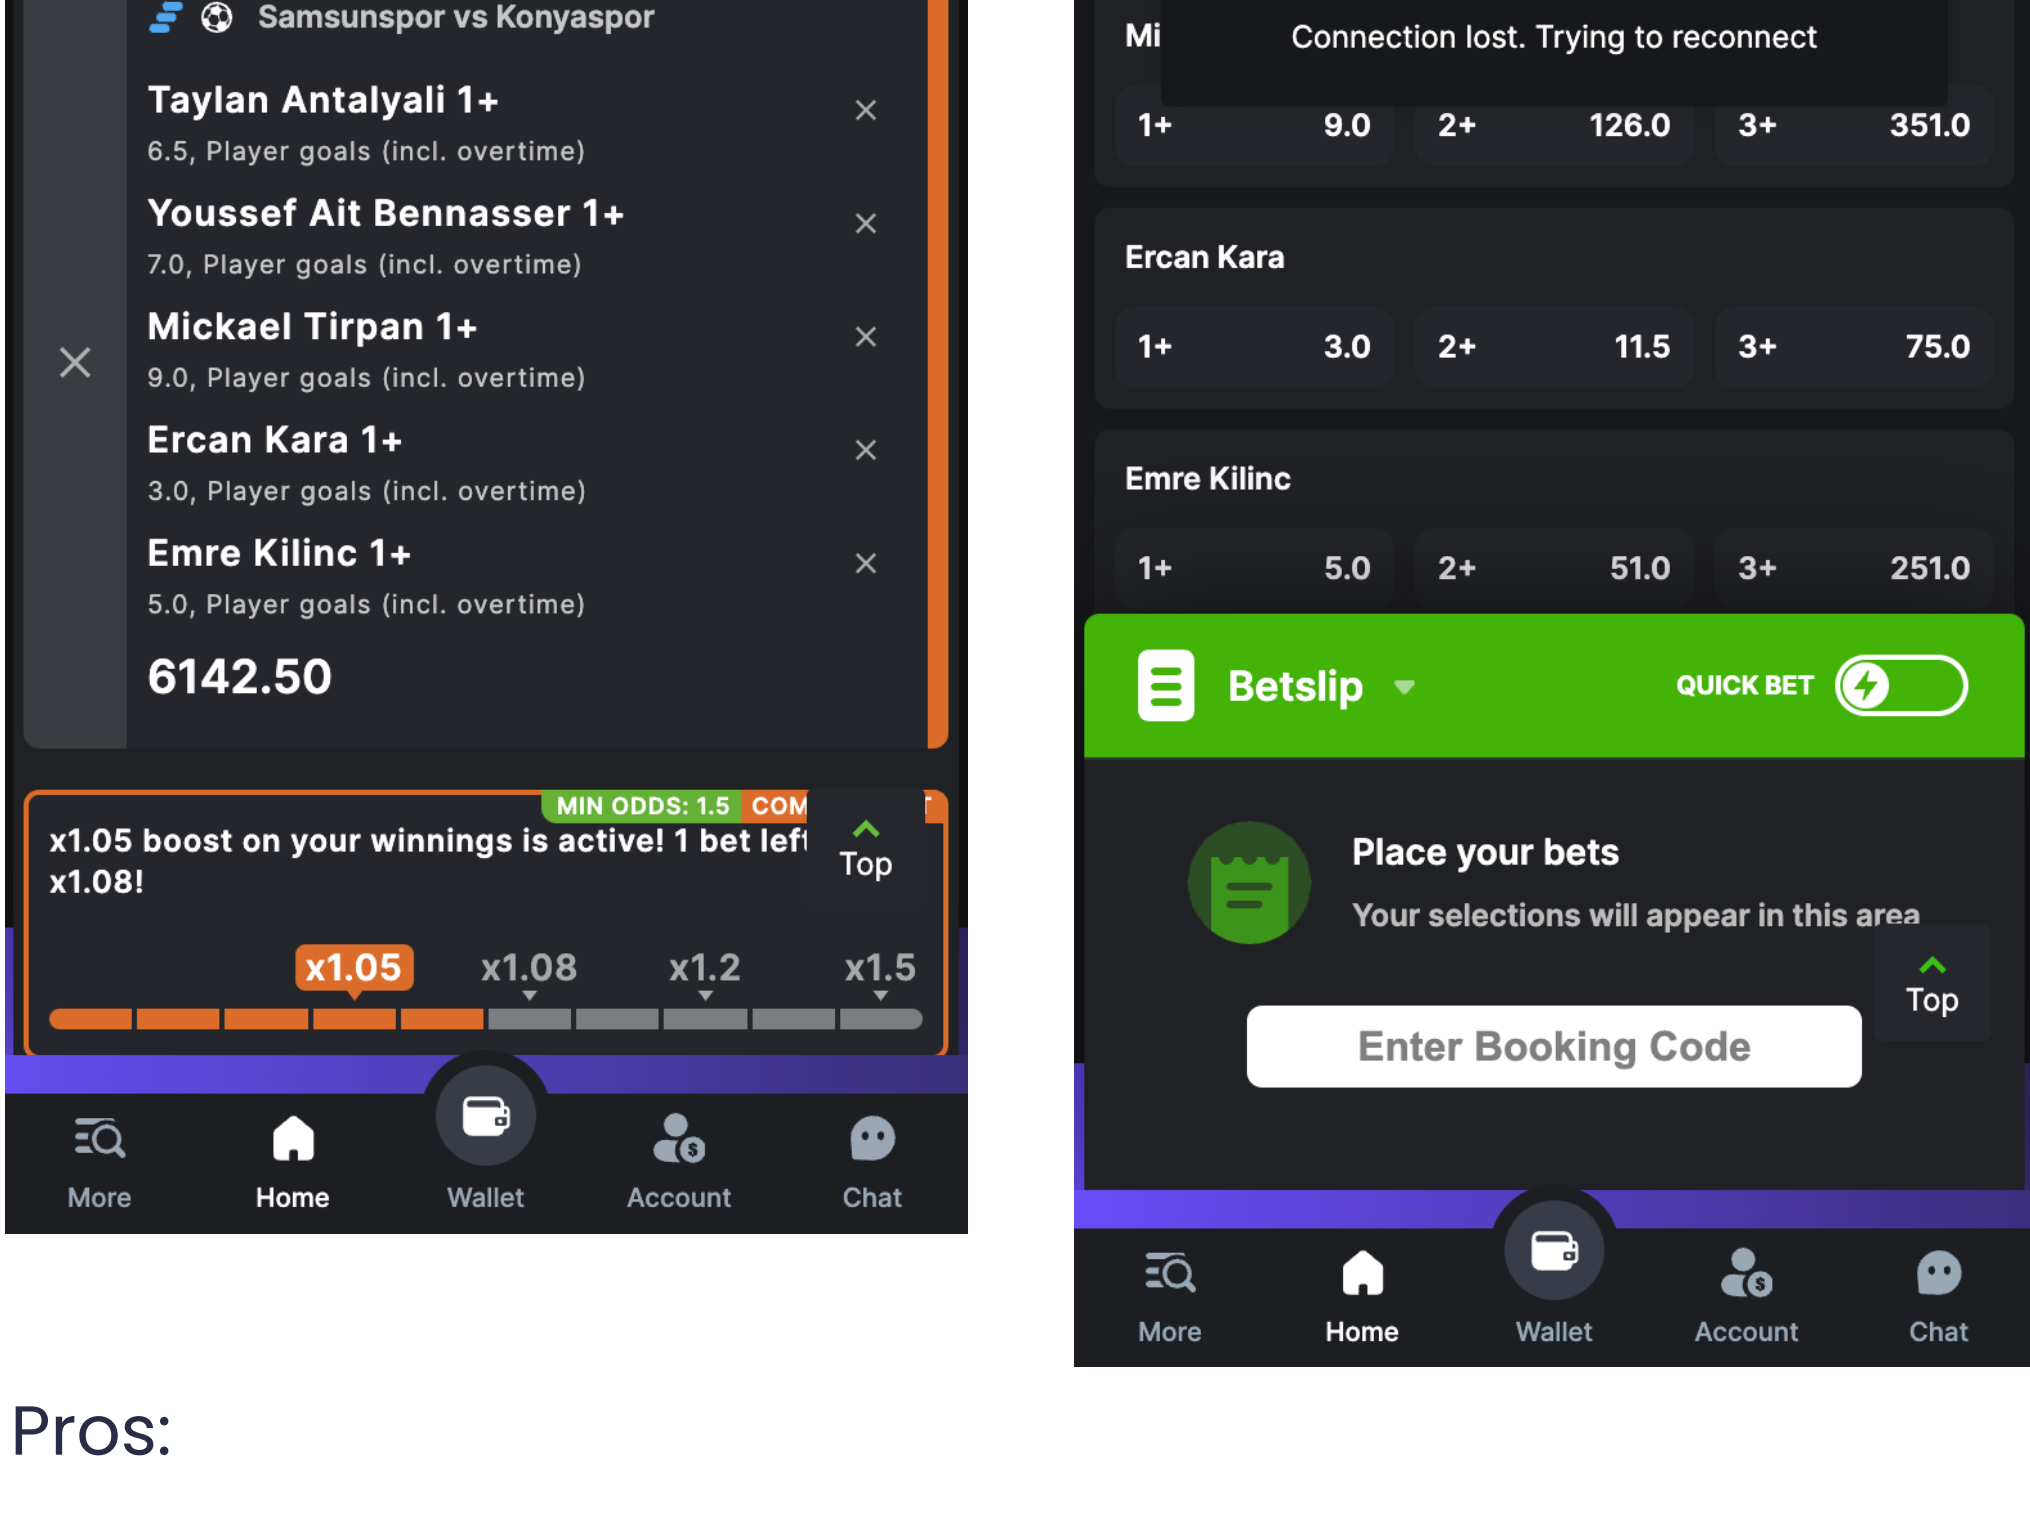

Pros:

- Odds and bet type is a single row horizontal slider this allows greater space usage compare to have multiple columns. Give a neater and cleaner look and feel.

Cons:

- Segregation between each bet type is not well defined, may cause confusion.

## Bet slip

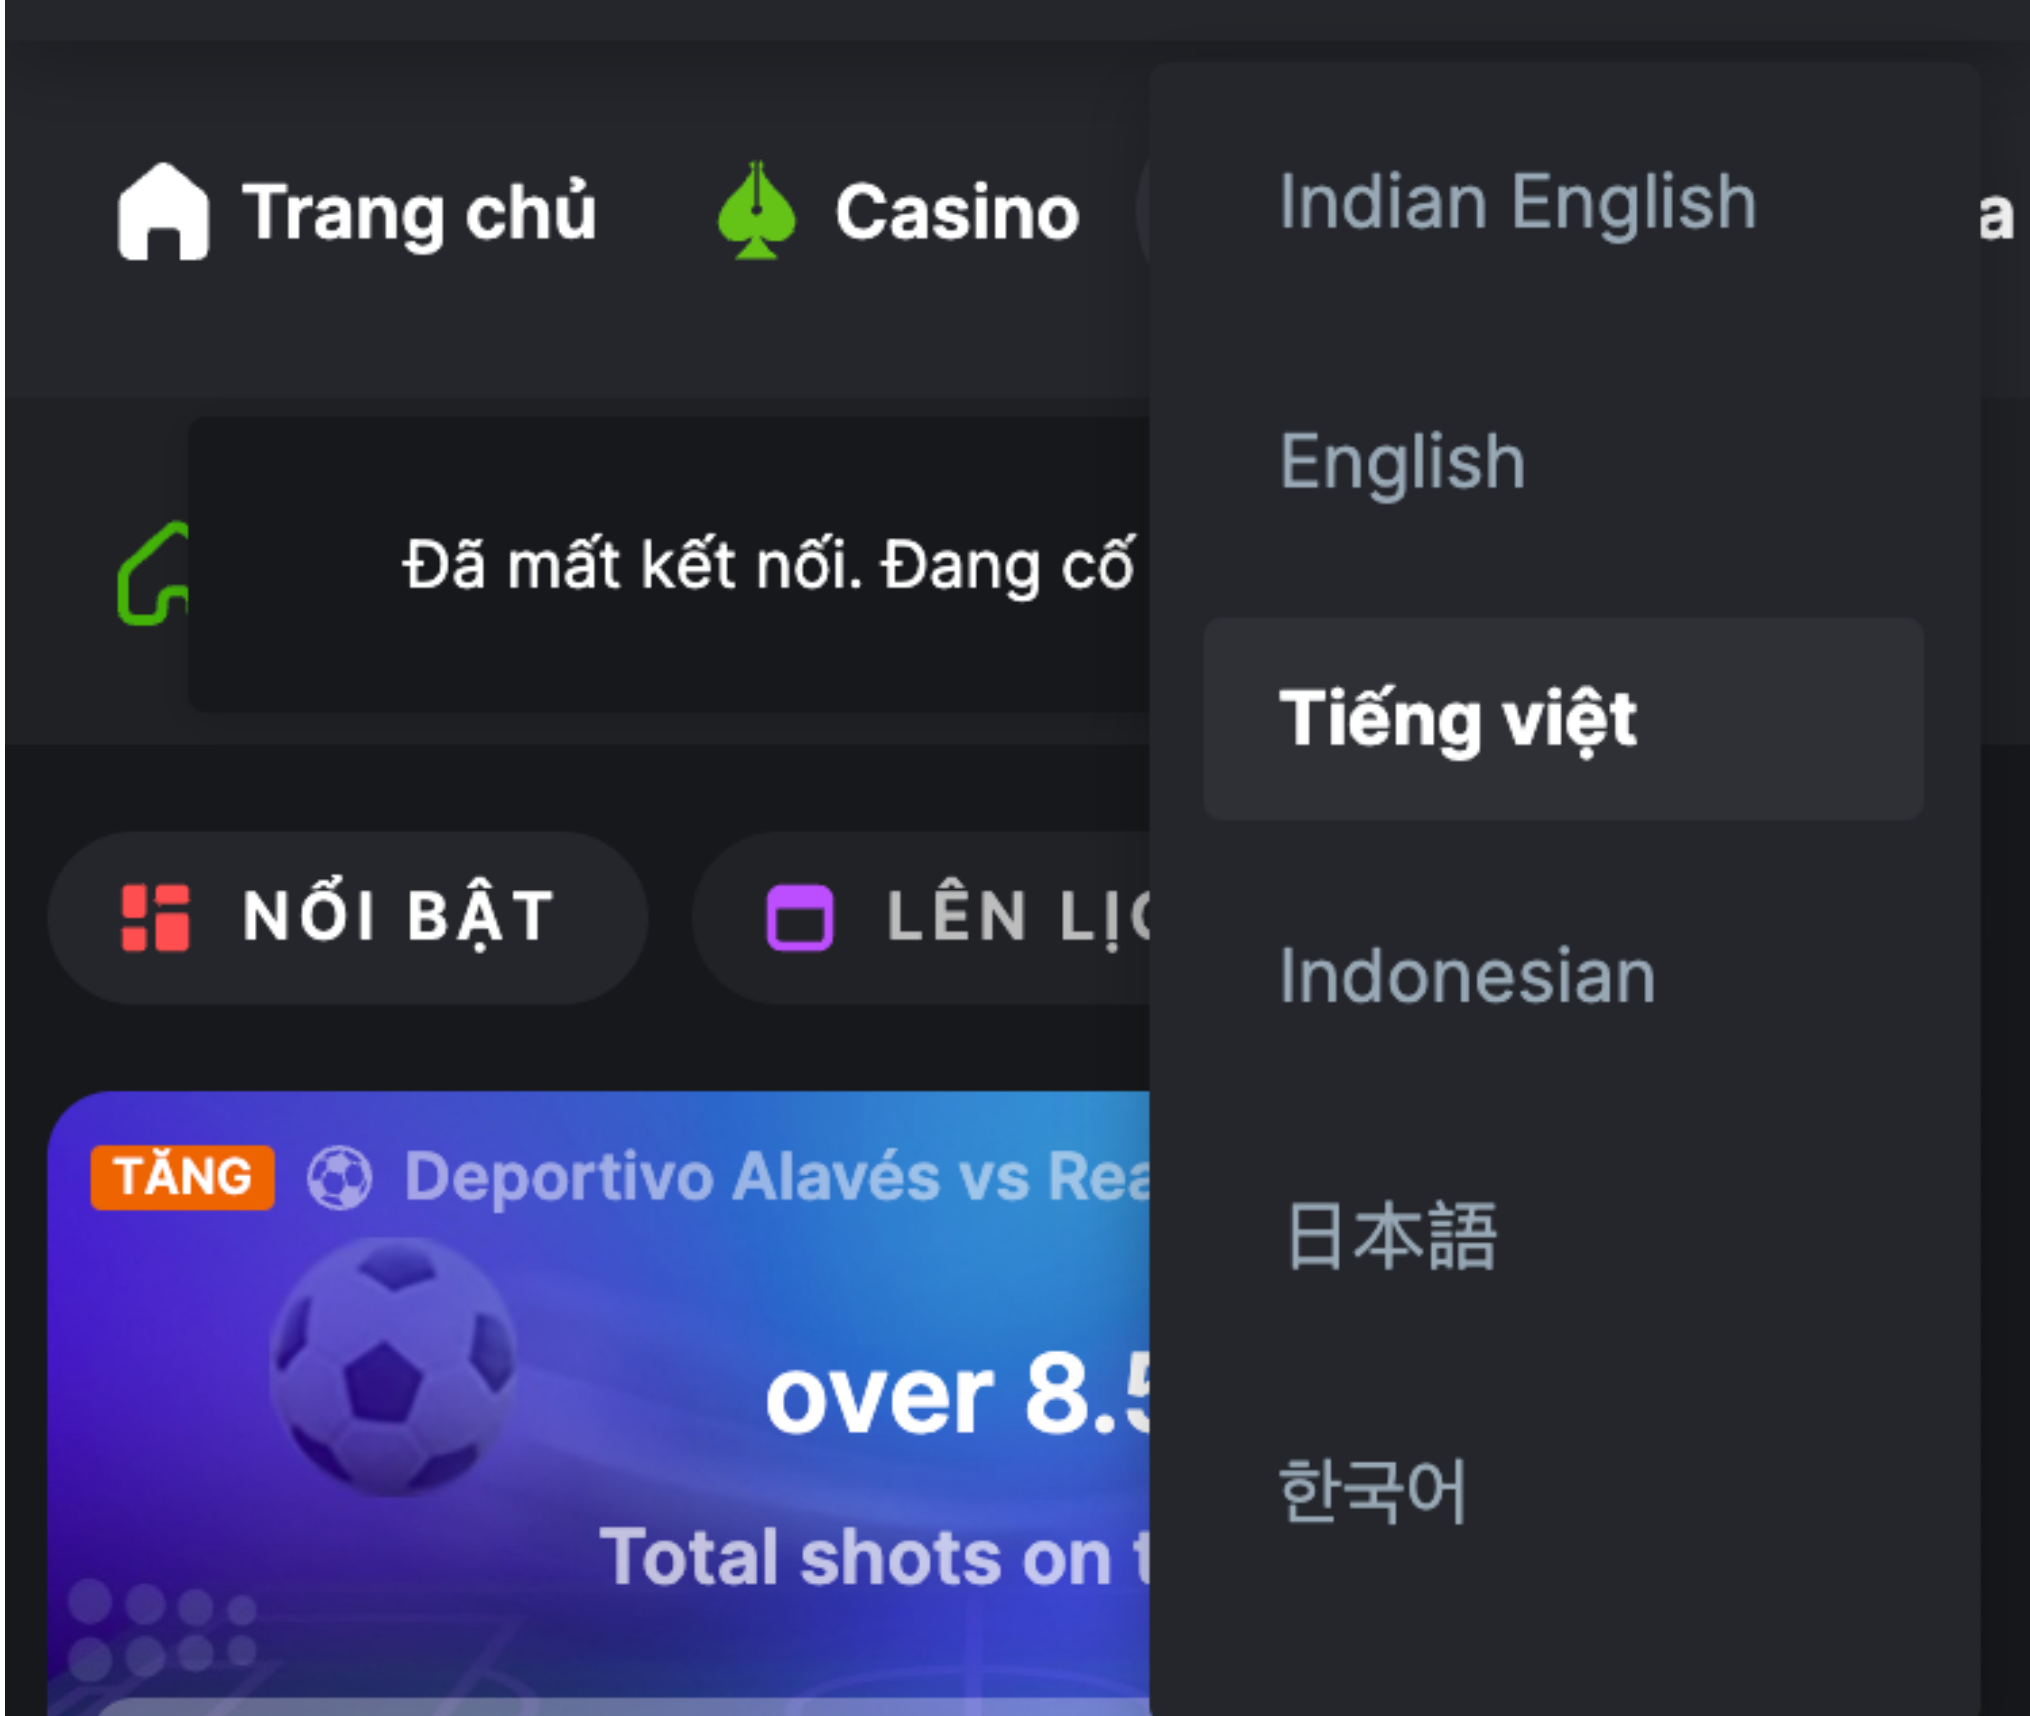

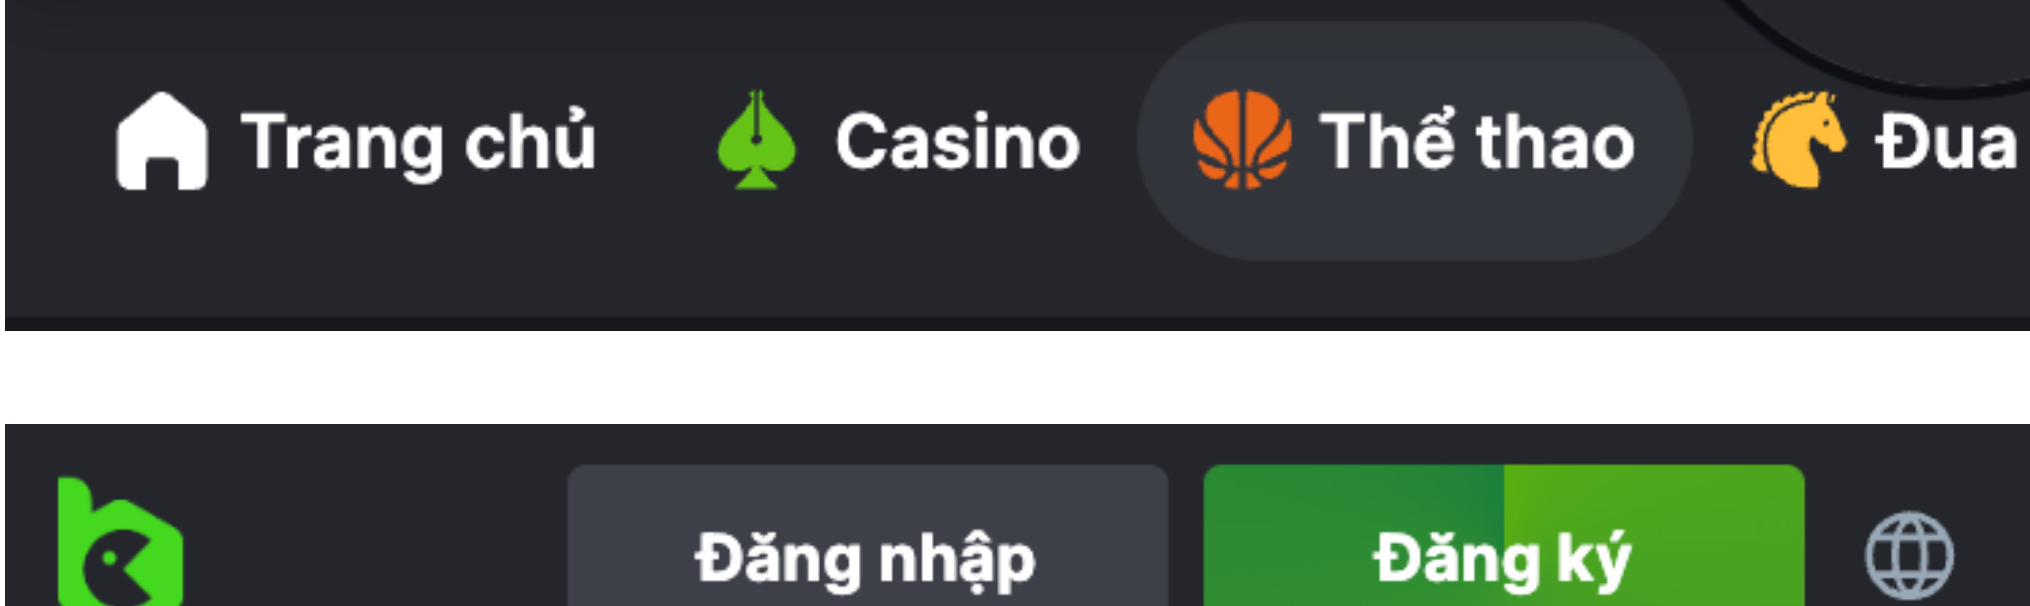

Pros:

- Good usage of font size and weight to show bet type and odds.
- Color contrast to highlight additional details.

Cons:

- Segregation between each bet type is not well defined, may cause confusion.
- Bet slip menu can only be dismiss with arrow down button, which make UI navigation harder when overlay take up whole space.

## Language Display

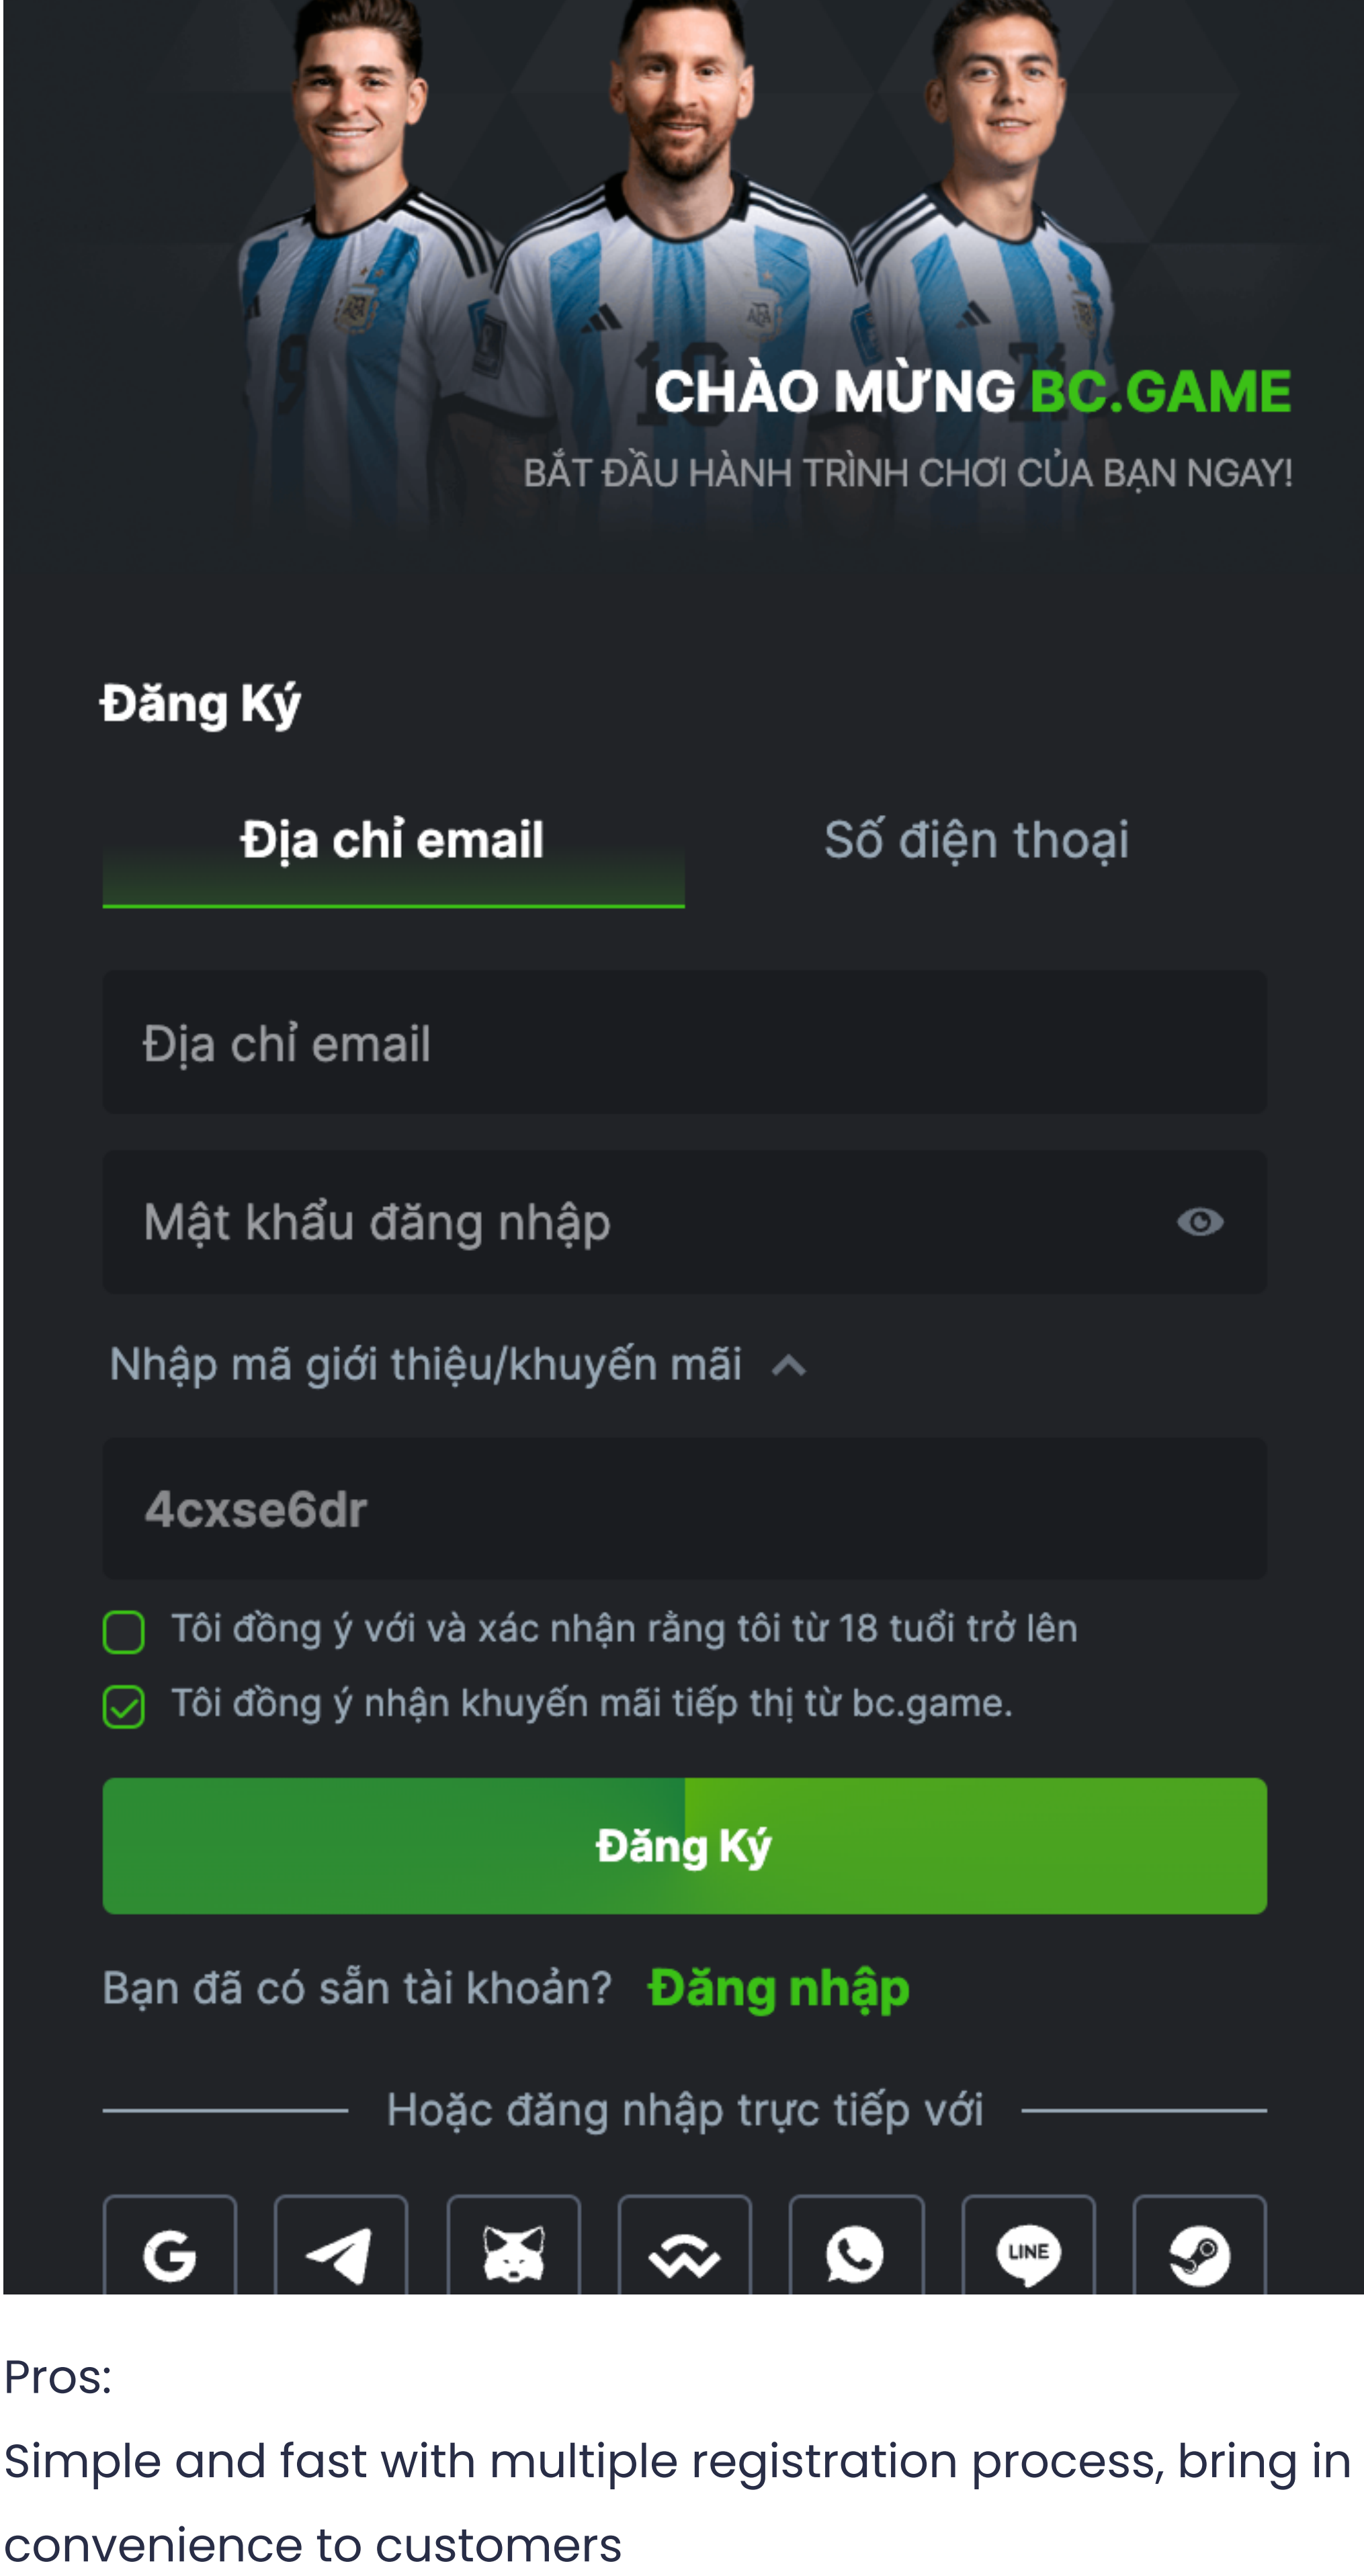

Pros:

- Straight forward CTA fixed to the top nav bar
- Language drop down menu shows the translated language, which probably invoke a sense of familiarity, when user want to change to their native.

Cons:

- Dropdown menu in mobile could take up more column spacing, in this sense the amount of scrolling will be reduced as there is 2 column of text.

## Login menu

Pros:

Simple and fast with multiple registration process, bring in lots of convenience to customers

Takeaway:

- website looks more modern compare to others
- website only accepts with crypto deposits
- Lots of registration options

# Other Platform Font Analysis

Other Platform Analysis

Platform 1

FOTMOB

Fonts Family

GT Walsheim (Licensed)

Mostly using GT Walsheim fonts, with rubik as fallback font.

Font Sizes (px from rem)

- 25px
- 19px
- 16px
- 14px
- 13.3333px
- 13px
- 12px
- 10px

Font Weight

- 400 / regular
- 500 / medium
- 700 / bold

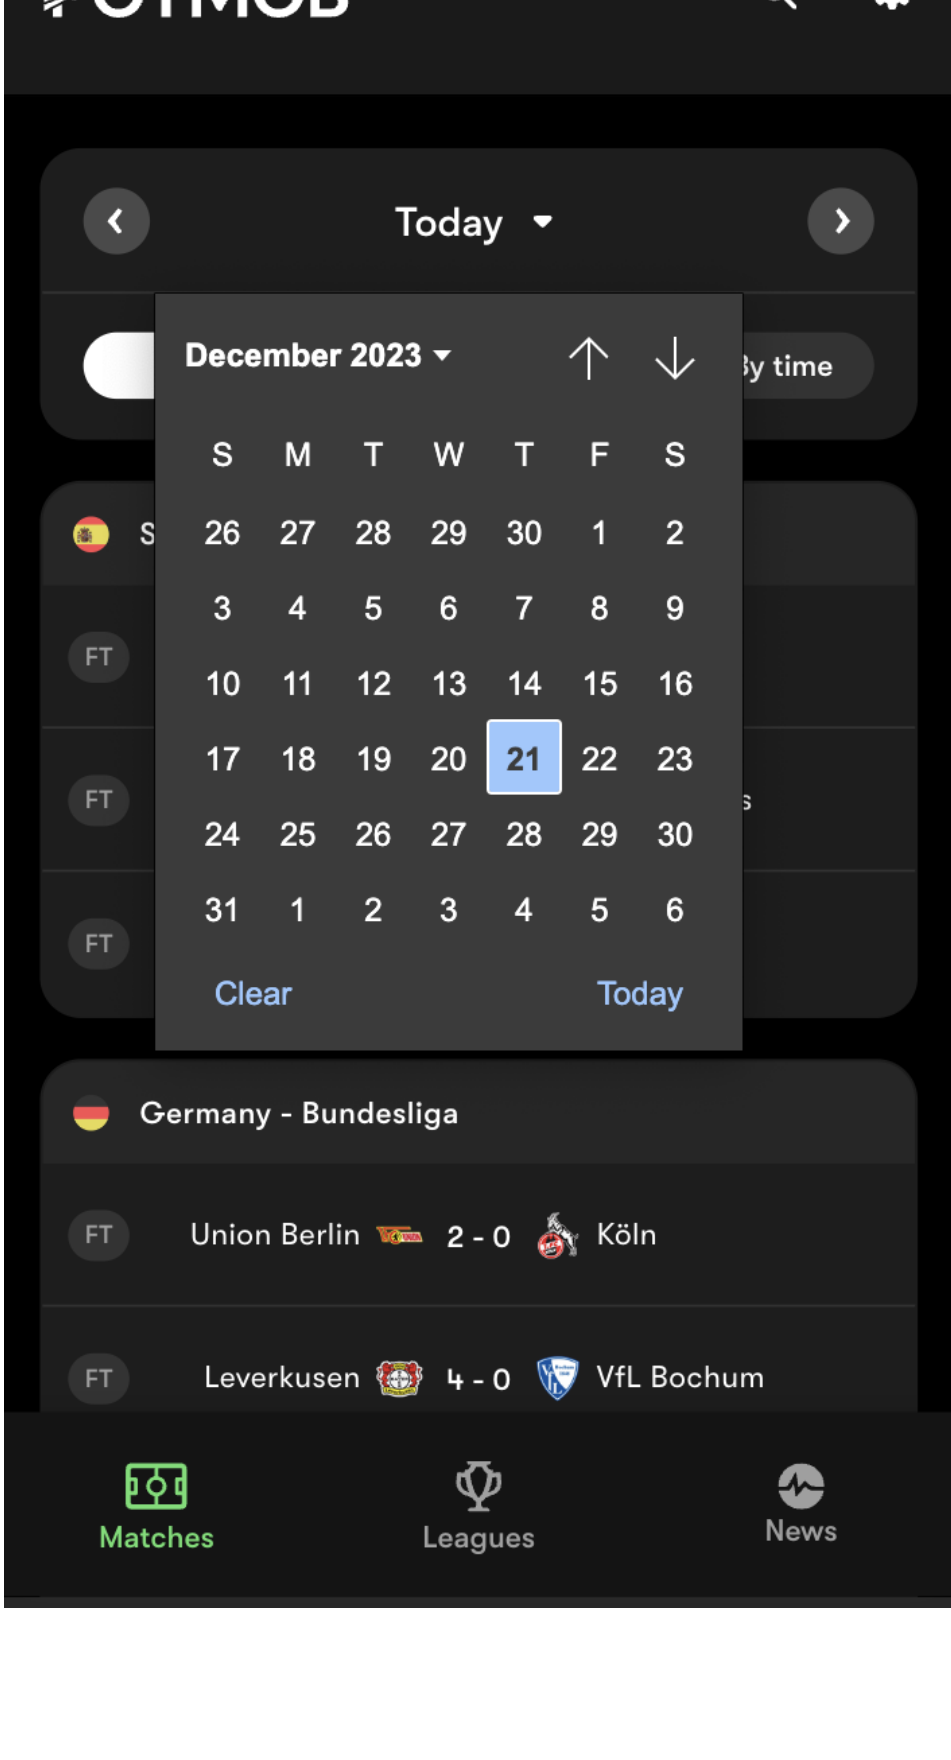

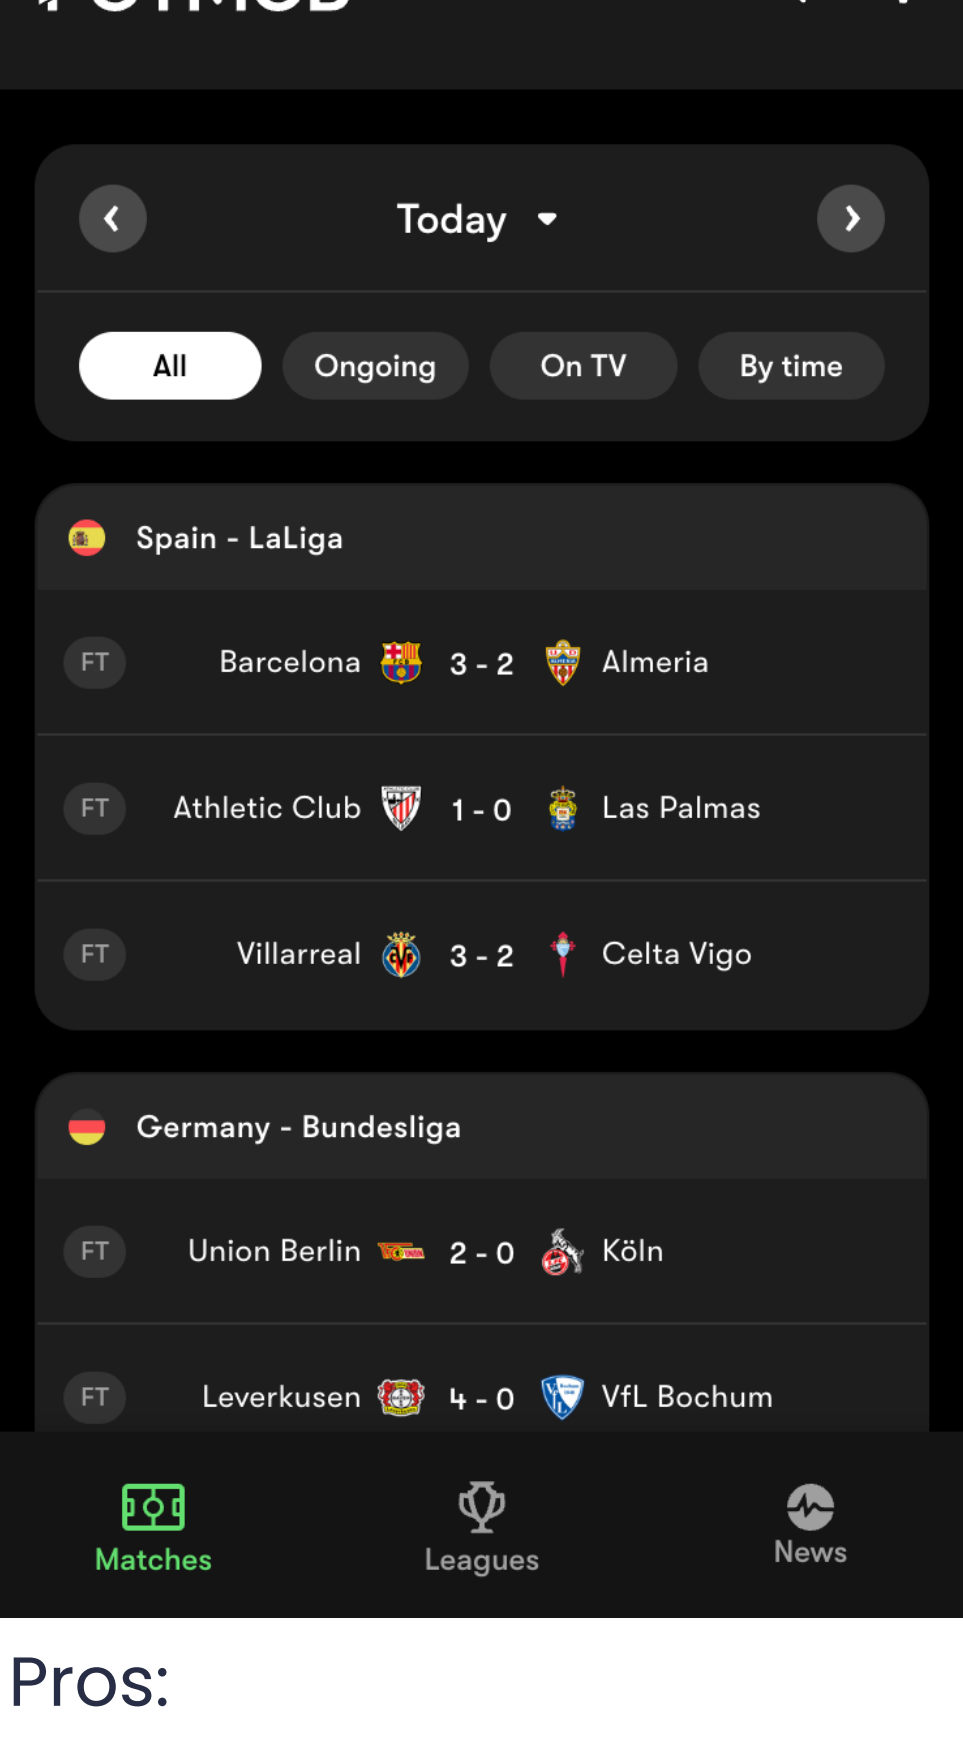

\*in mobile screen smallest width of 320px they root font size of 16px as 1rem

Language Display

Similar to other sportsbook platform this website also uses dropdown selection for changing of languages.

Homepage, match filter

Pros:

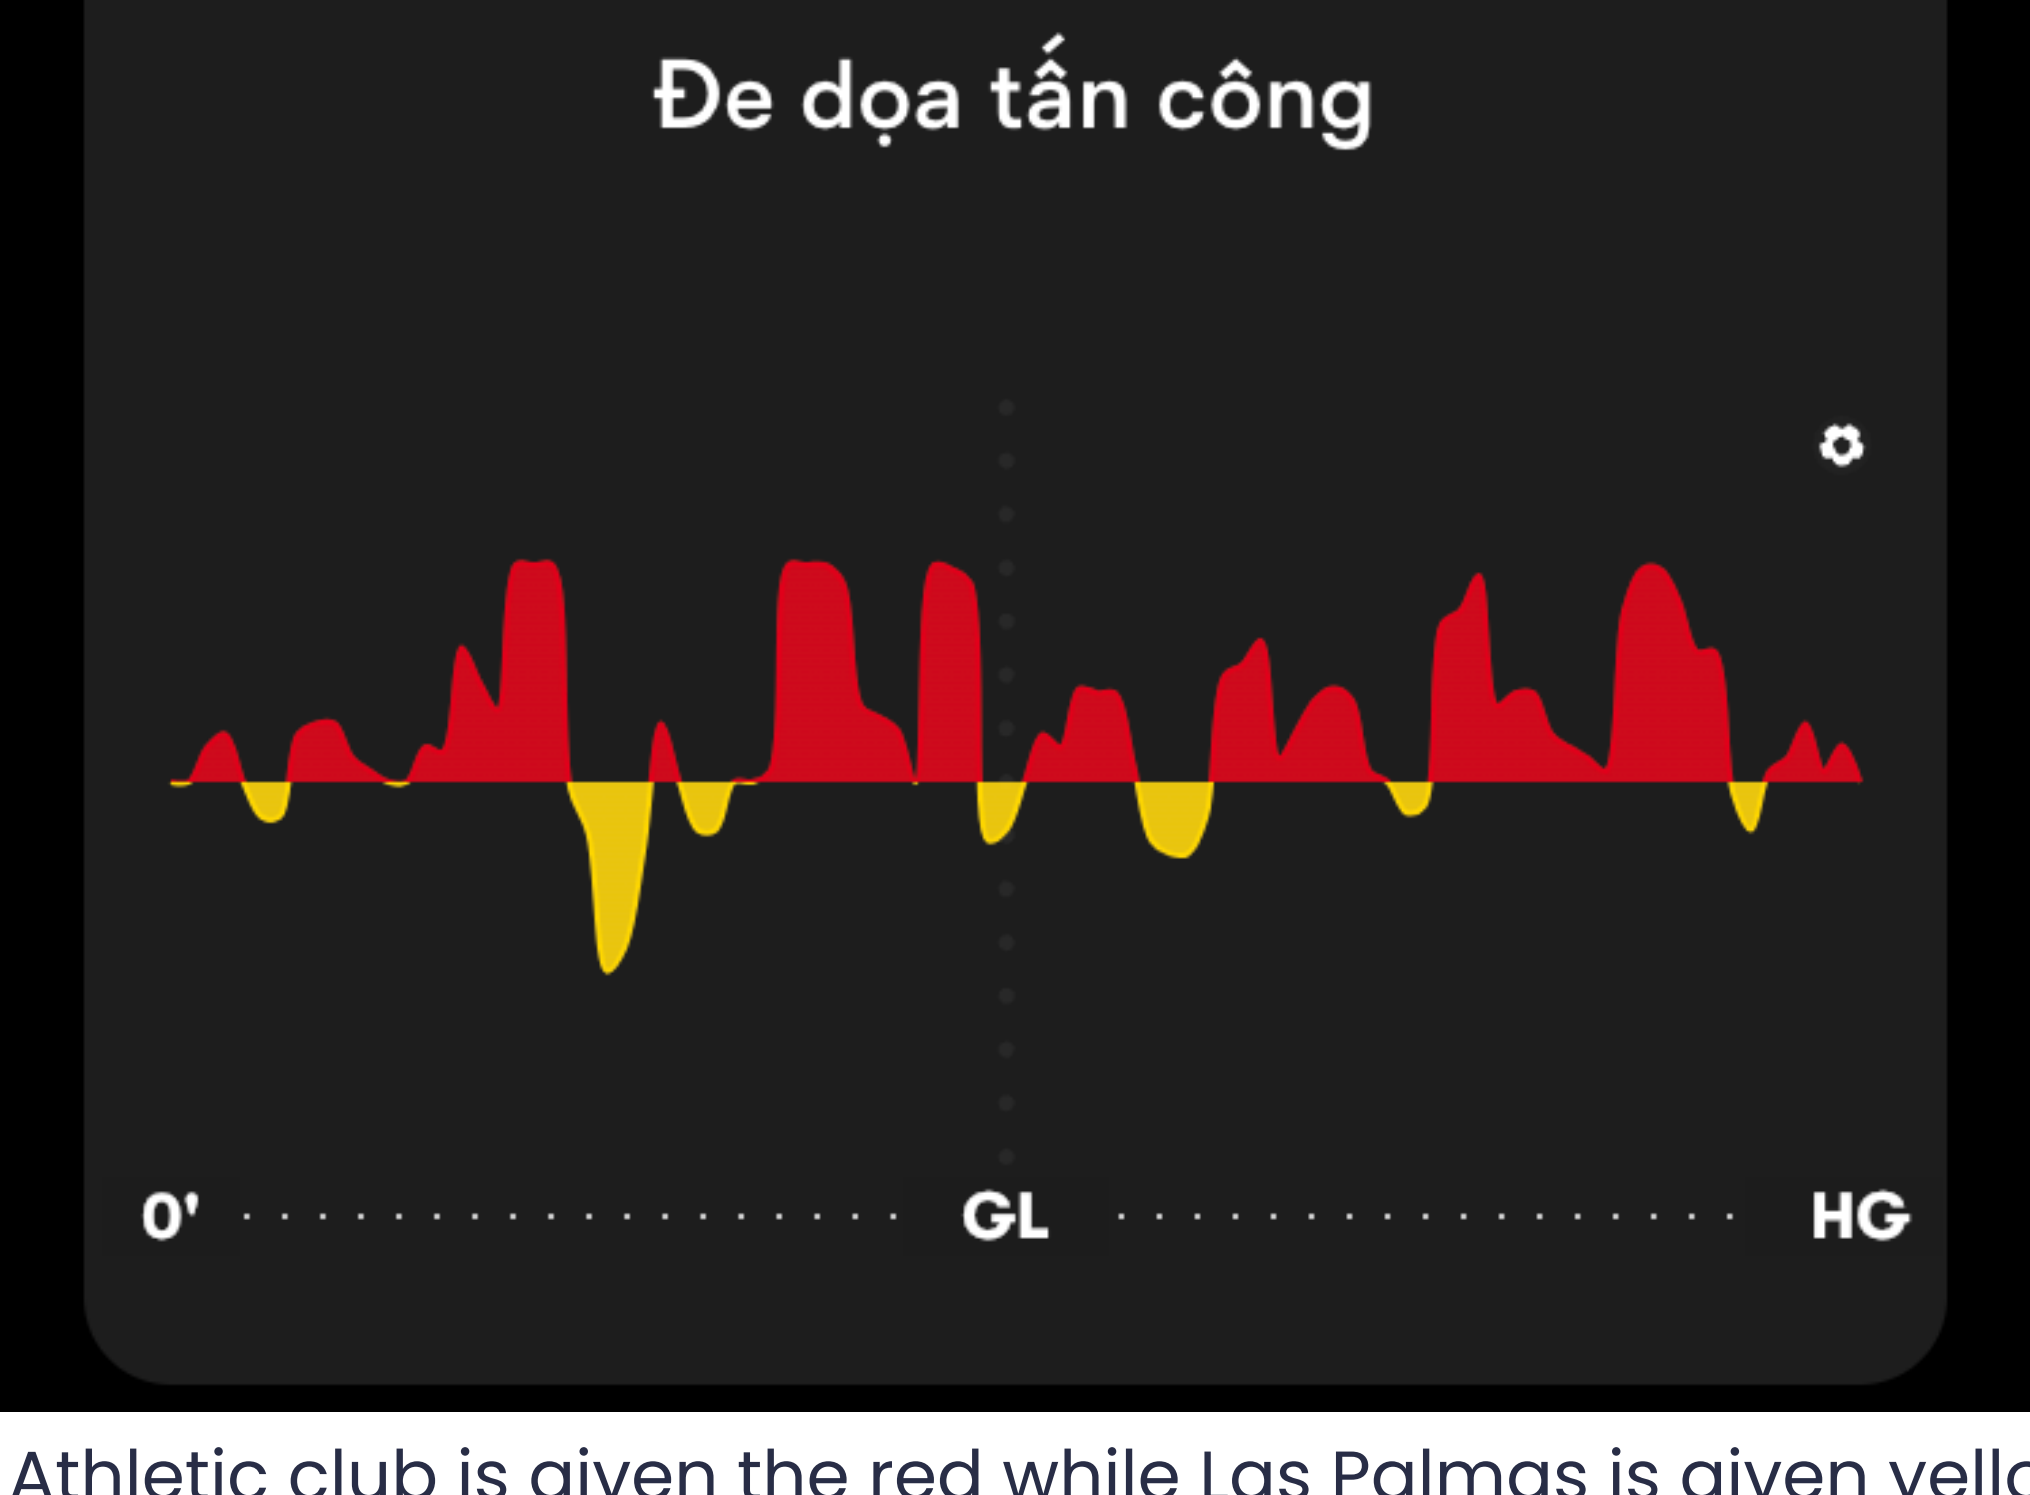

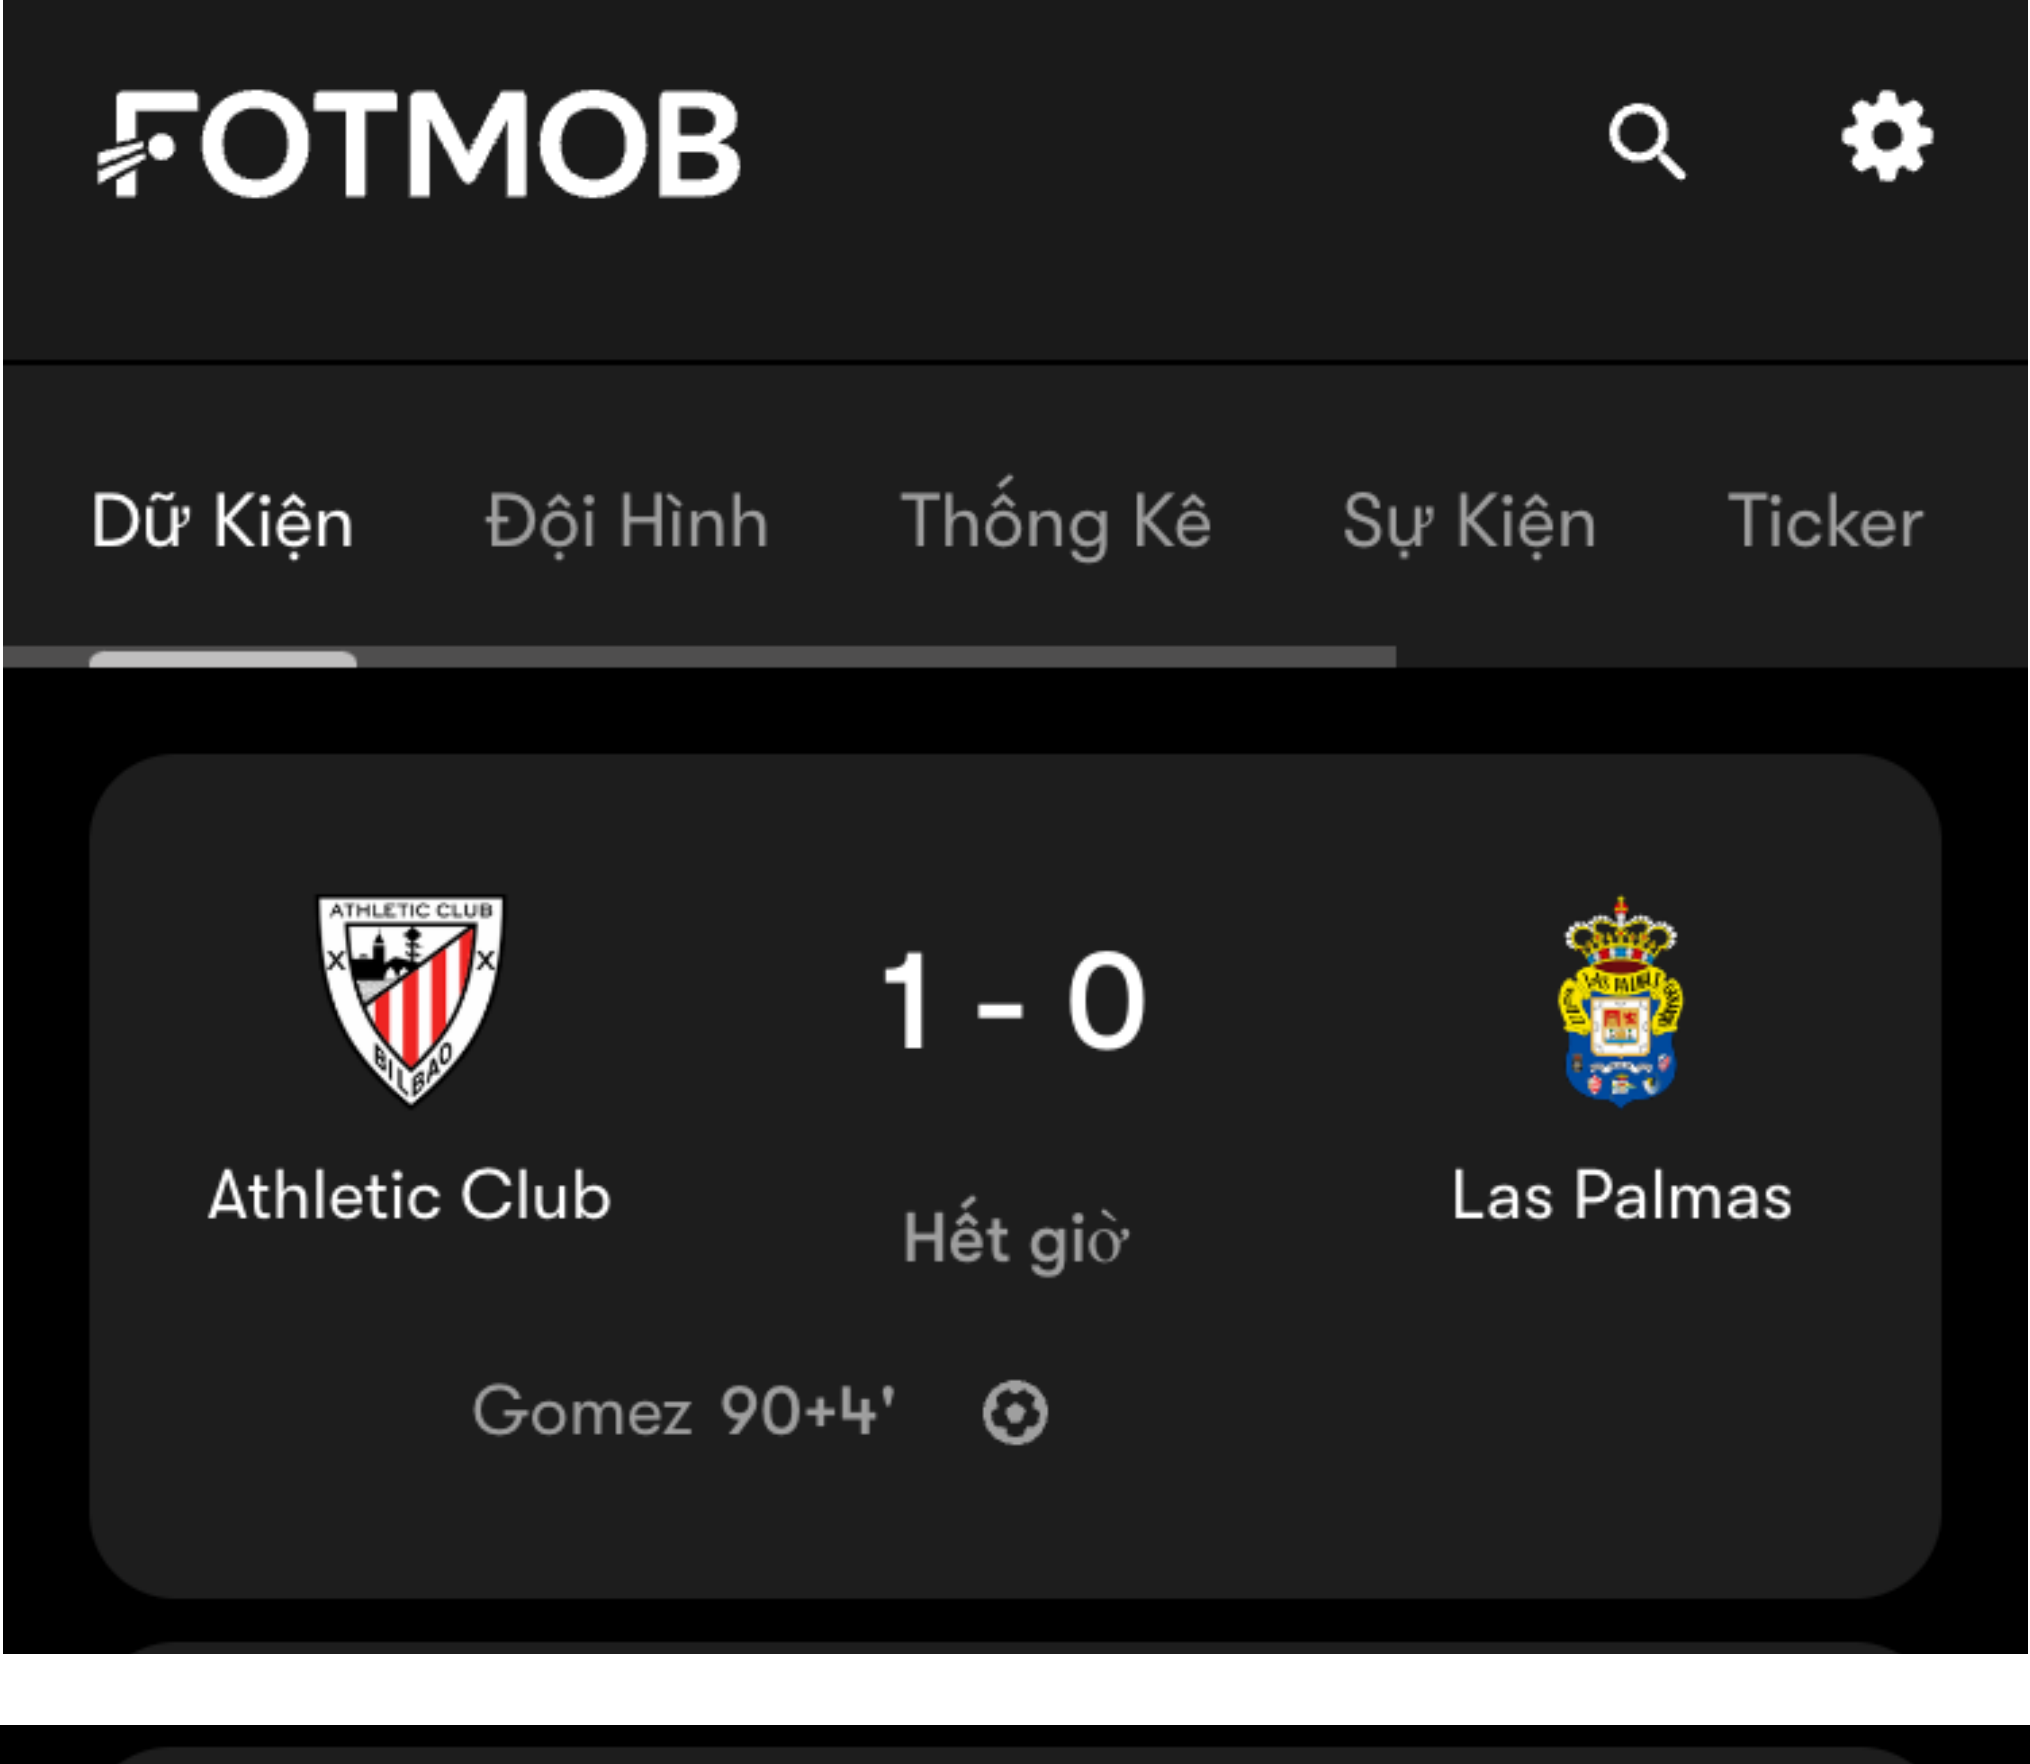

- Allows user to quickly sort matches be it current or upcoming, simple and easy to understand.
- Clear navigation of left/right button to check matches

single match details

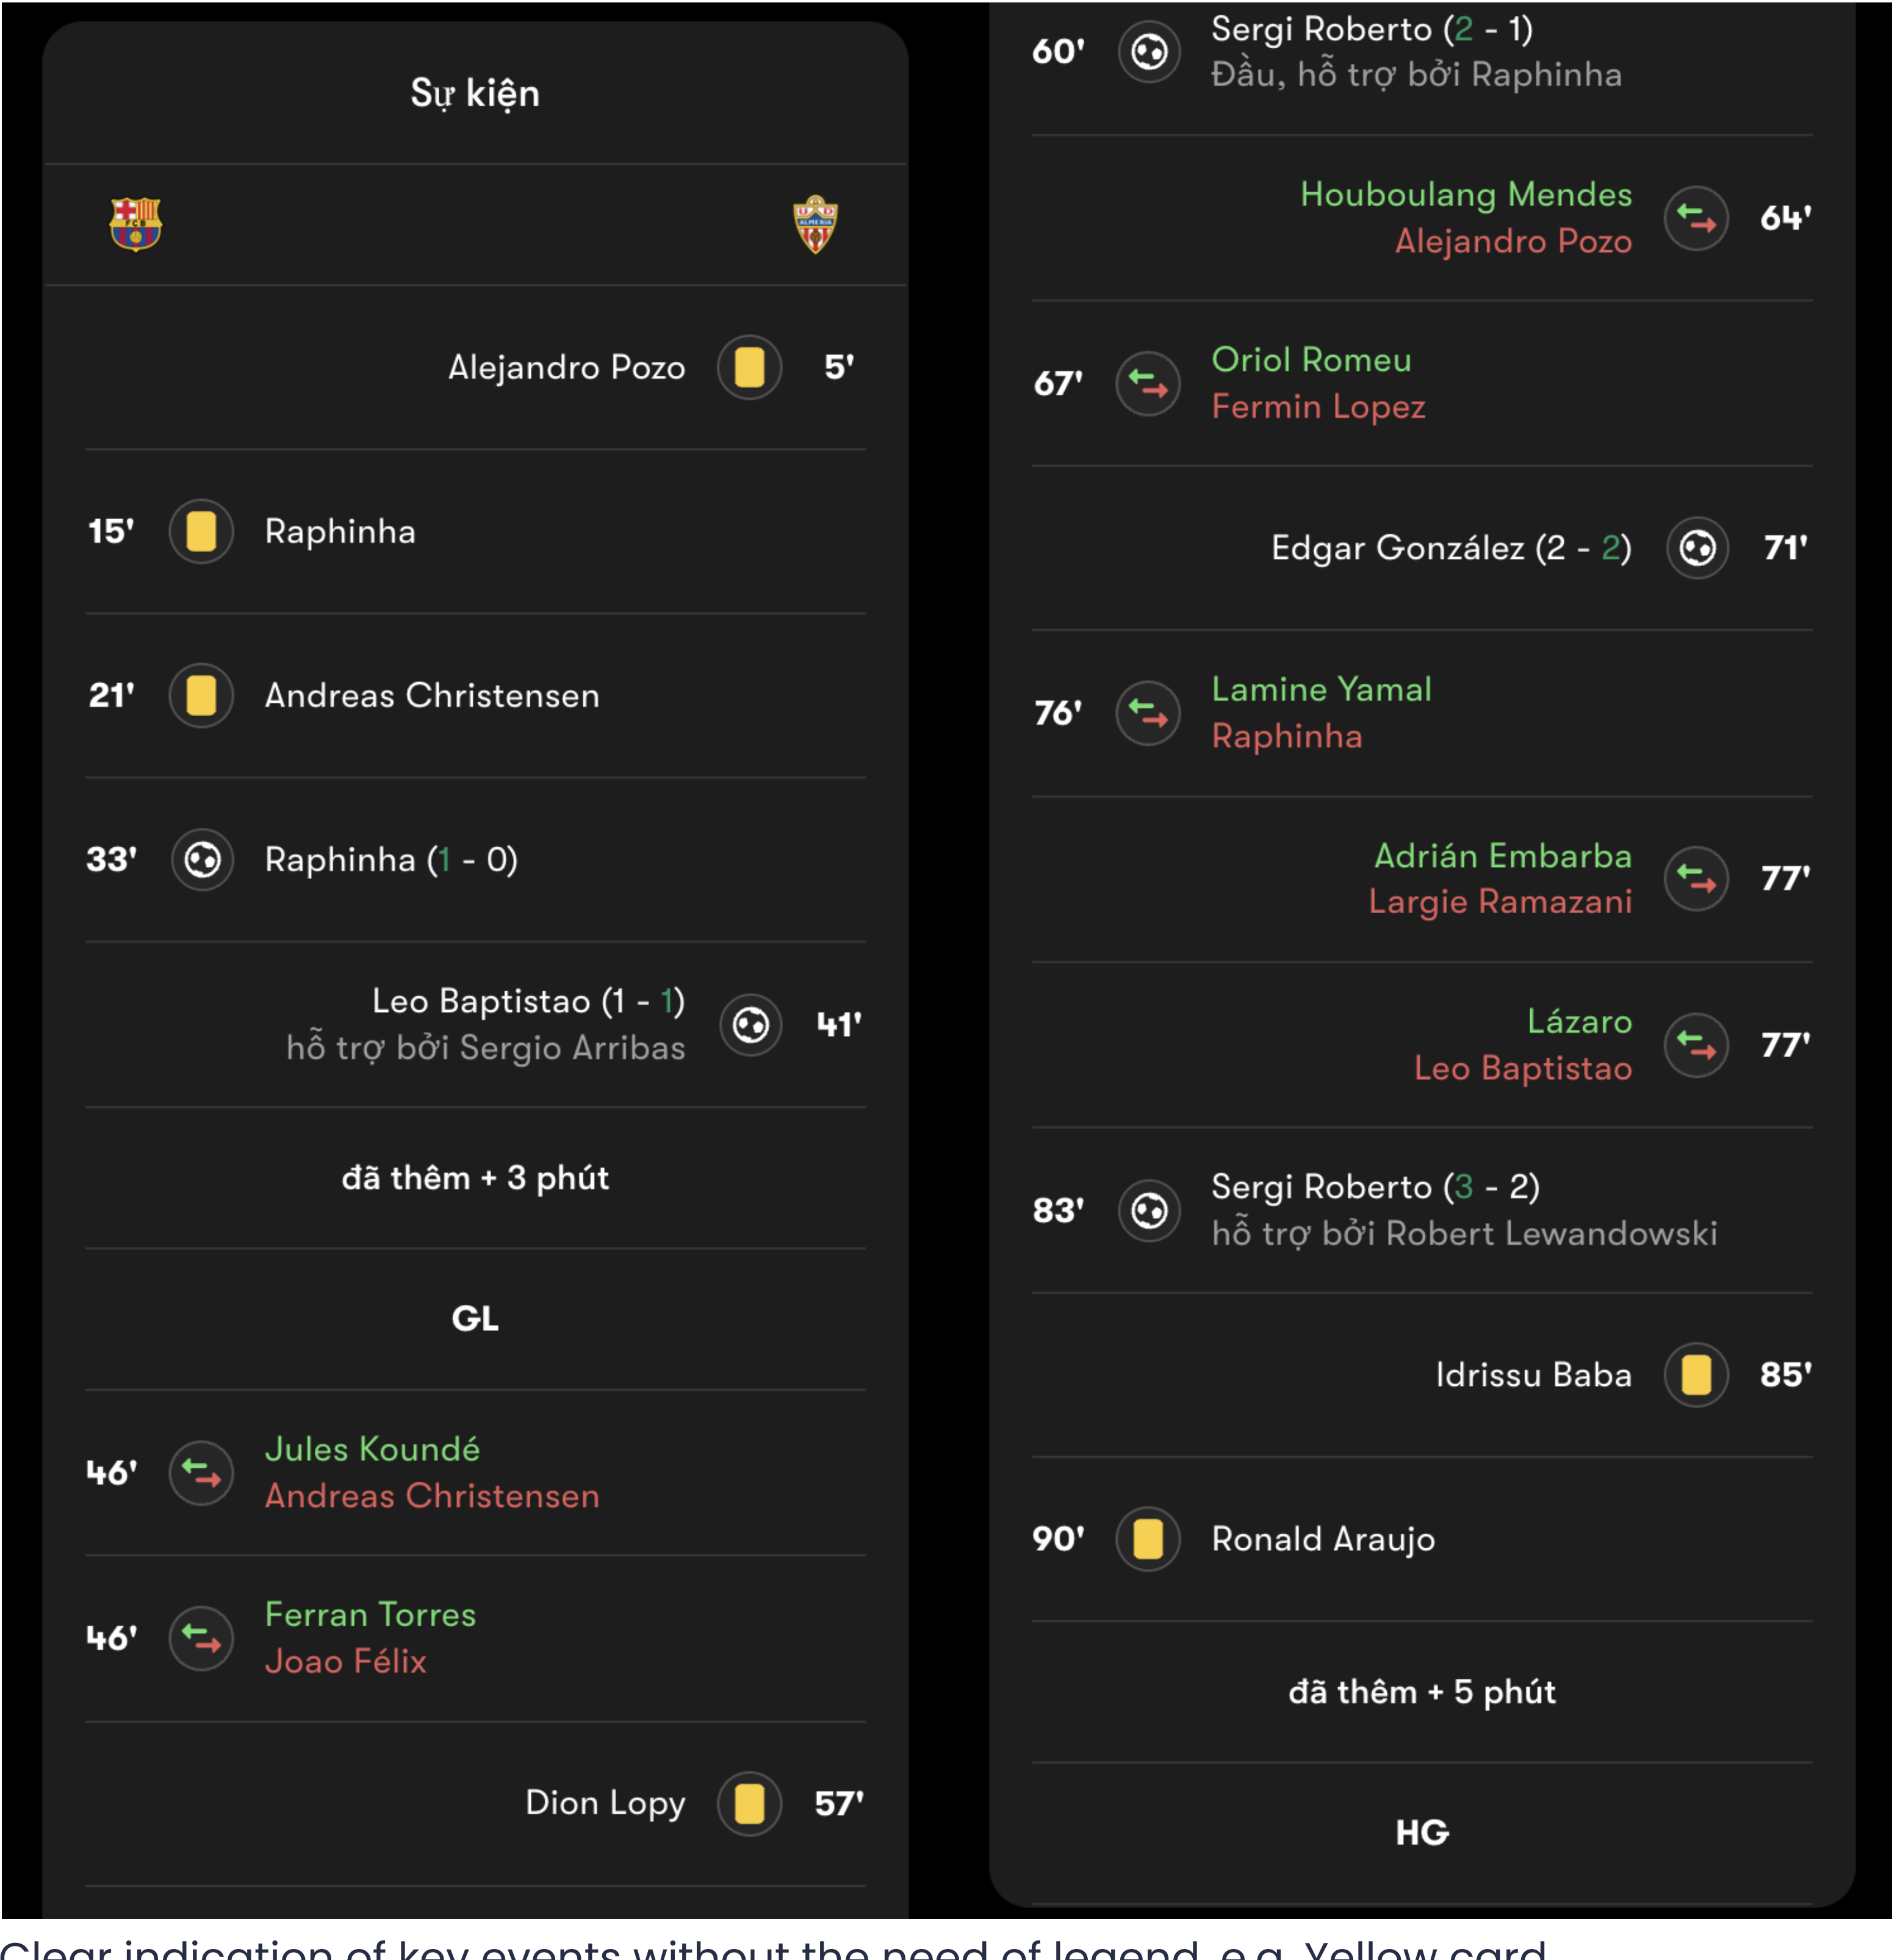

Good usage of fonts and color, medium weight to show bet type, contrasted coloring to show odds.

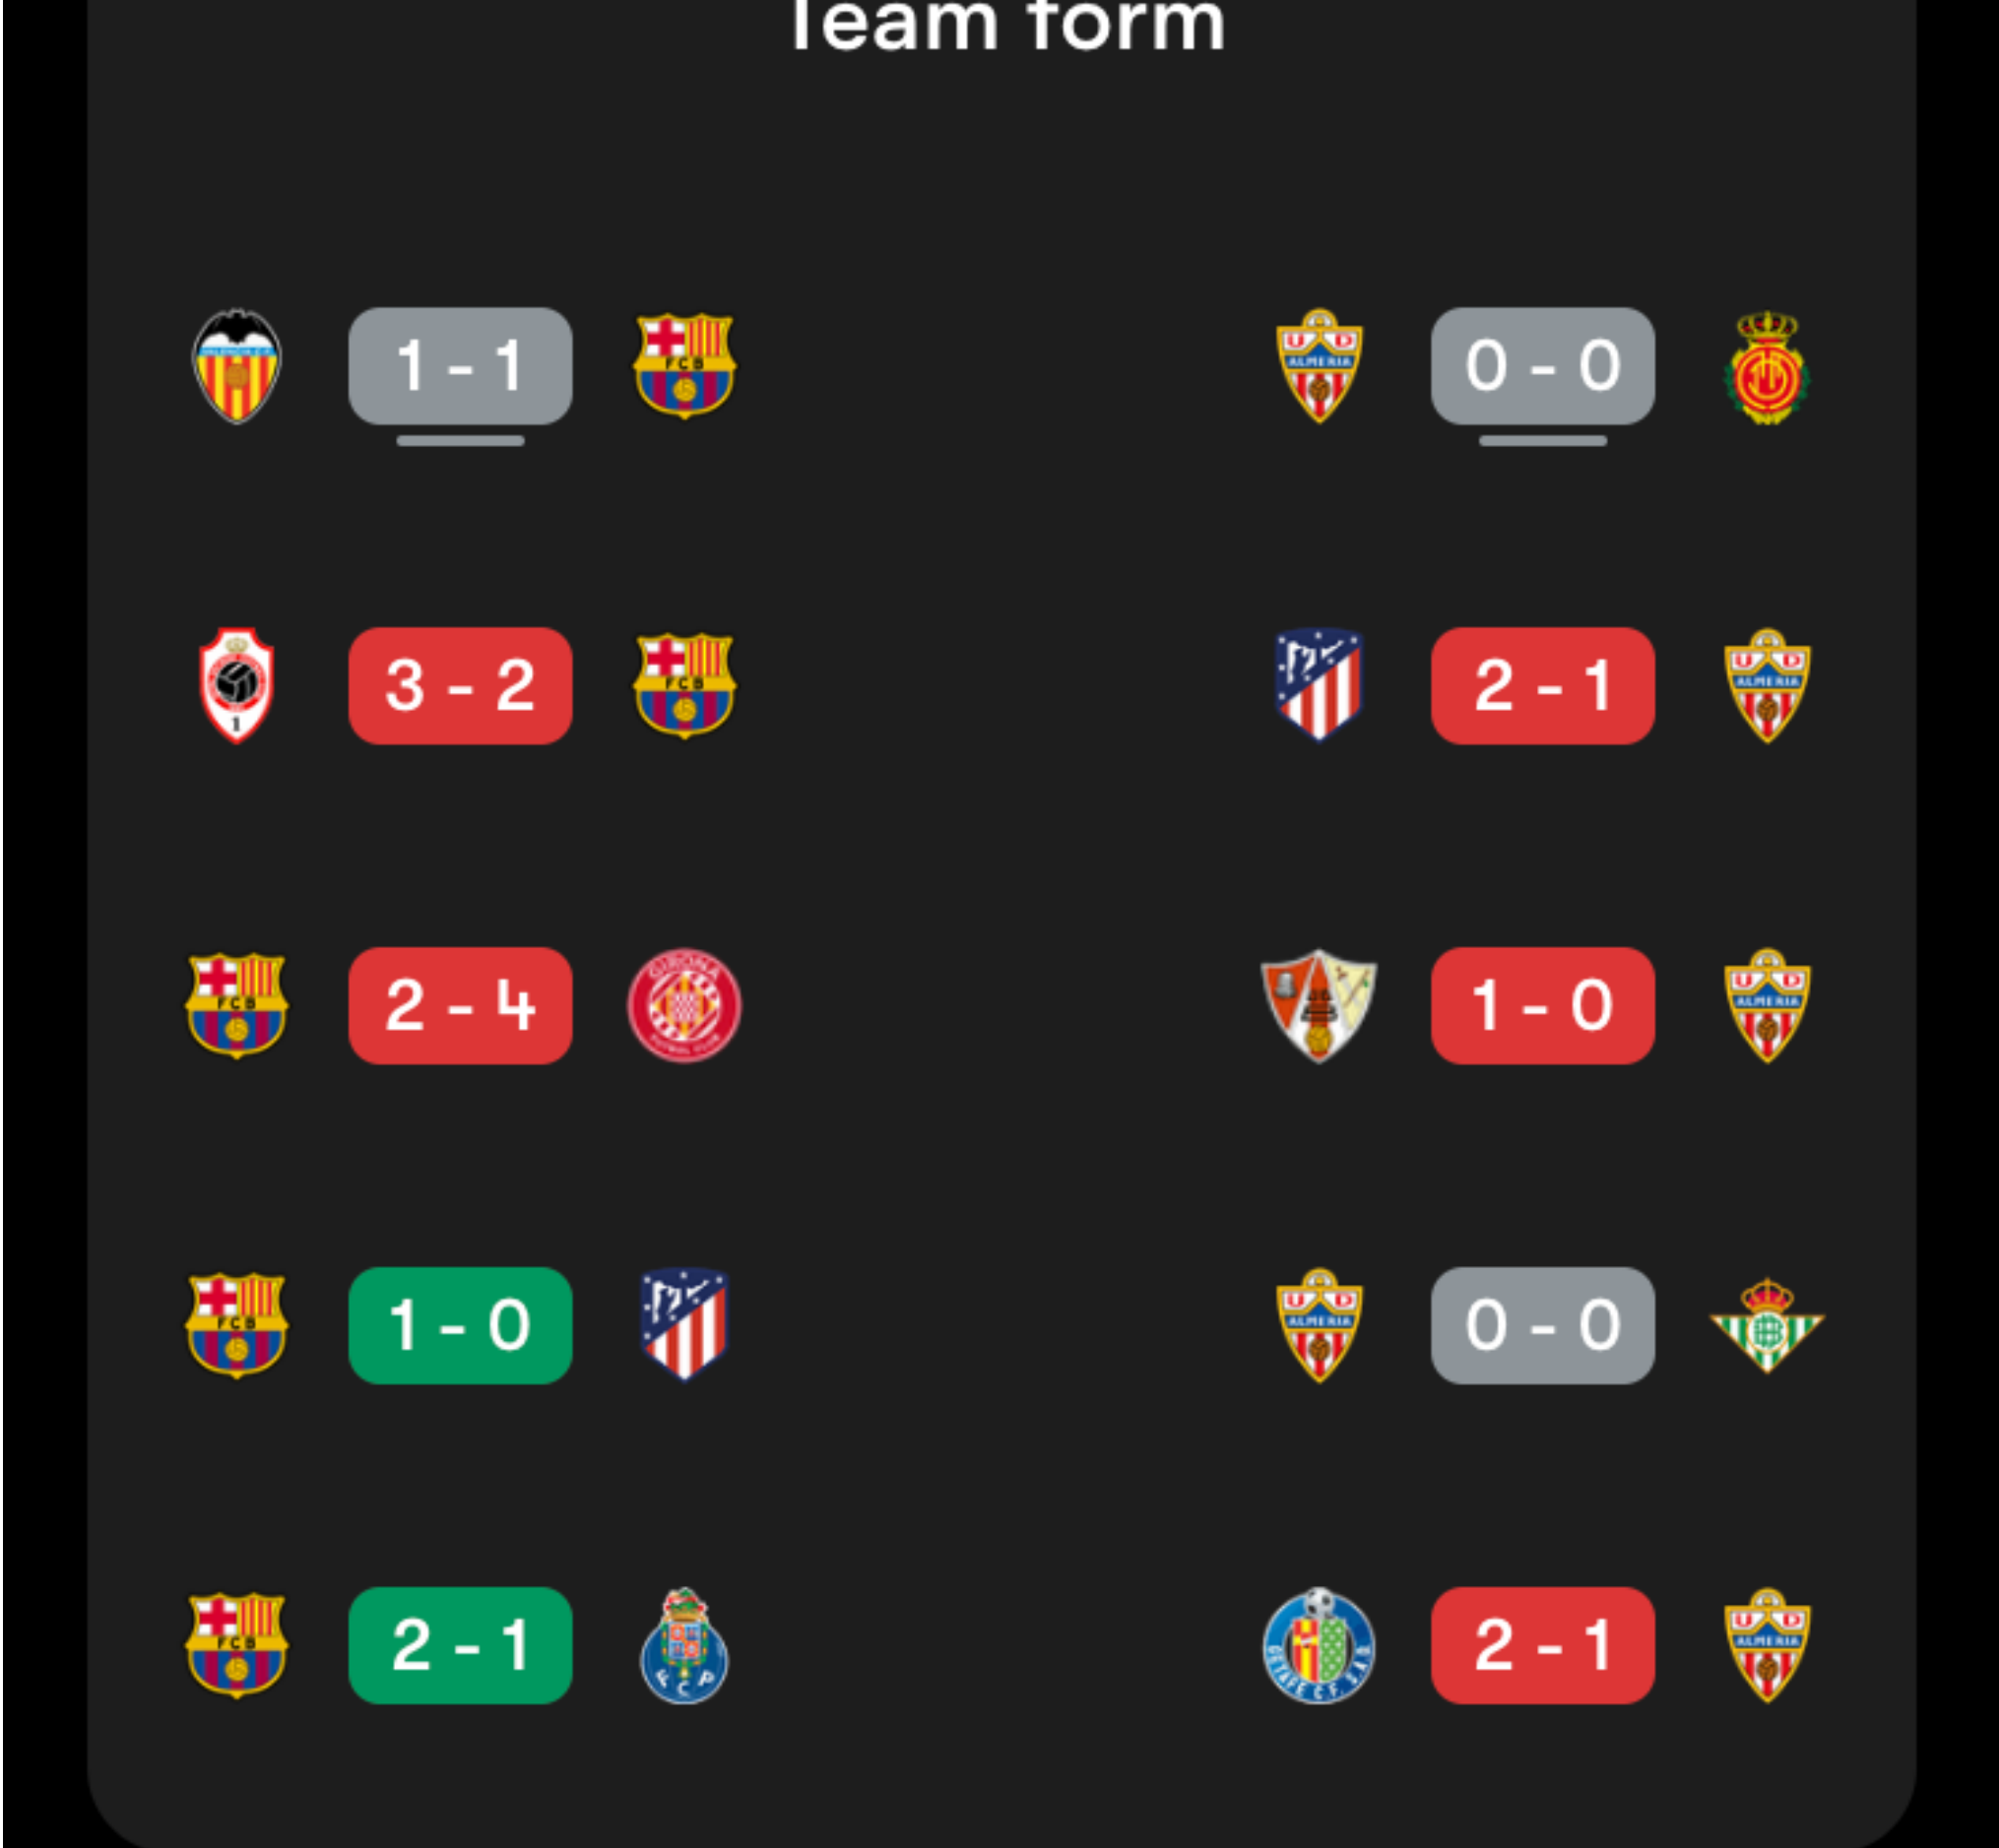

Colors of stat based on team

Athletic club is given the red while Las Palmas is given yellow, this minor attention to details, let team that are familiar with the club color know which is which at a glance.

Clear indication of key events without the need of legend. e.g. Yellow card symbol clear and easy to understand regardless of language.

Takeaway:

- website has cleaner and more intuitive ui/ux
- follow the rule of kiss(keep it simple stupid)
